

AL-V-B-067  
Smith Stone House  
Mile Lane, Mt. Savage  
Ca. 1810

The Smith House is a two story, one bay wide building constructed of sandstone laid in a coursed rubble pattern. It is believed to have been built during the first decade of the 19th century and given its size, location and construction material, may have served as a slave quarters for the Archibald Arnold Farm which is located approximately two hundred yards to the east. The house has a large frame addition on its northwest facade.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This four-part house is located on Mile Lane in the Arnold's Settlement area north of Mt. Savage. The building faces north.

The structure consists of a central two-story section which appears to be of log construction, a small 1½ story stone section to the east, and a two-story frame section to the west. The stone section is set at a slight angle (see photo), with a one-story frame section connecting it to the log section. Each section is covered by an asphalt-clad gable roof. The three sections of wood construction are covered with asphalt siding.

The gable roof of the stone section runs north-south. The building is constructed of random rubble stone. The south gable is of frame construction.

A 1/1 sash window appears in each exposed wall. The south and east windows are framed with ovolo trim. The north window and a 2/2 window in this end's half-story are topped by a narrow wooden lintel.

A brick chimney serves a corner fireplace at the northwest corner. An entrance appears in the exposed south wall of the cellar.

The floor plan consists of a single room on either floor. A straight-run stair enclosed by a beaded board partition runs along the south end of the west wall. The ceiling of the upper floor level is covered with beaded boards. Ovolo trim surrounds the south window. A door in the west wall leads into the connecting section.

The connector is covered by an east-west gable roof. It is lighted by a 1/1 sash window at the south end, and a band of five single-pane windows at the north end. Two adjoining six-pane windows appear in the west end. Entrances are located in the north and east gable walls. This single-room section is heated by a stove-flue chimney at the east side.

The roof of the log section runs north-south. This section is heated by a brick stove-flue chimney in the south end. 2/2 sash windows light the building, which is two bays deep by approximately three bays long.

A stone-walled spring originates outside the north end. Stone steps descend to the spring and a cellar entrance. The spring is channeled through the stone cellar to a stone-lined drain outside the south end.

Few original details remain in this section. The roof appears to have been raised a half-story, and the original floor plan has been obliterated. Large hewn joists are visible in the cellar. Although this section has not been definitely proven to be log, the thick walls suggest either log or timber-frame construction.

# 8. Significance

Level of Significance: <input type="checkbox"/> national <input type="checkbox"/> state <input type="checkbox"/> local	

Prepare both a summary paragraph of significance and a general statement of history and support.

This farm was owned in the early 19th century by the Arnolds for which Arnold's Settlement was named. John Mattingly bought the farm in 1843.<sup>1</sup> The stone and log sections, the barn, and the smokehouse all appear to date from the early 19th century. The connector and frame addition appear to date from the late 19th century.

The juxtaposition of the two early sections is unusual. The functional purpose of their slight separation is not known. The log section may predate the stone section. The log section is slightly larger, and appears to serve as the main dwelling. The stone building does not seem to be a kitchen as its size and separation from the log structure might suggest, since it does not have a cooking fireplace. Its corner chimney is unusual.

<sup>1</sup>John Nelson and Joan Baldwin, MHT survey form 1977 and Allegany County Land Records.

7. Description (cont'd.)

Survey No. AL-V-B-067

The three-bay by two-bay frame addition is covered by an east-west gable roof. The windows in this section are fitted with 2/2 sash. Central entrances appear in the north and south sides. An enclosed porch covers the two western bays of the south side. A brick stove-flue chimney appears in the west end.

A timber-frame gable-roofed smokehouse stands west of the house. It is covered with wide, lapped weatherboards. The entrance opens into the east side.

A timber-frame bank barn on a stone foundation is located east of the house. The construction is distinguished by sill-to-plate angle braces.

**DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE**

The Smith Stone House is located on Mile Lane in Mt. Savage, Allegany County.

The Smith House is a two story, one bay wide building constructed of stone laid in a coursed rubble pattern with quoins. A large irregular, frame addition abuts the original stone portion on the northwest facade. The entire structure rests on a high stone foundation. The roof on both the stone and frame portions is gabled with a cornice and a fascia and is covered with asphalt shingles. Windows in the stone portion have been replaced and now feature double hung, wooden sash frames with a combination of one-over-one and two-over-two lights. Windows in the frame portion feature double hung, pegged, wooden sash frames with a combination of one-over-one, two-over-two and six-over-six lights. The main entrance of the stone portion is no longer visible. Entrances in the frame portion are located on the north facade and have been replaced. A single, corbeled, brick chimney is located in the inside end of the stone portion of the house. A second, corbeled brick chimney is located in the frame portion of the building.

## STATEMENT OF SIGNIFICANCE

The Smith Stone House is believed to have been constructed circa 1810 of locally abundant sandstone materials. A group of buildings that are of similar construction and size are located in the immediate vicinity, and these houses are all believed to have been built about the same time. Although there are conflicting theories regarding the original purpose of the Smith building, the survey believes that the stone portion first served as a slave quarters for the Archibald Arnold Farm. The theory that the stone house was a slave quarters is based upon three aspects: The size and the style of construction, the distance between the Smith and Arnold houses, and the difference in construction materials of the two buildings. <sup>1</sup> The Smith house is a small and plainly constructed stone building which is located approximately two hundred yards east of the Arnold house. The location would place the stone house near the center of the Arnold fields, and the locally abundant stone materials used in the Smith house distinguish it from the large Arnold house, constructed of brick which was fired near the house. <sup>2</sup>

"Although the passing of each decade saw an increase in Cumberland's population, over 85 percent of the county's citizens still lived on farms well into the (19th) century. " <sup>3</sup> The period in which this house was built still depended upon farming as the economic mainstay in Allegany County. "In 1835, a visitor to the region reported to a Baltimore newspaper of the hundreds of thousands of acres of the finest land in Maryland, where wheat, rye, Indian corn and oats double the size of the common product were grown." <sup>4</sup>

The stone house and plot were purchased by John Mattingly in 1843 and later became known as the Sylvester Mattingly Farm; Sylvester being a son to John. <sup>5</sup> The large frame portion is believed to have been added by another Mattingly at the end of the century.
