Justification for decision: (Use continuation sheet if necessary and attach map)

Located in Locust Grove, the railroad bridge over Wills Creek is a brick structure constructed in the 1840s. It is one of the earliest remaining railroad bridges in Maryland. The structure is a four span brick arch bridge supported by granite piers. Marble and granite capstones line the deck. Built by the Cumberland Pennsylvania Railroad, the bridge was a component of the network of rail lines that brought Western Maryland coal to the eastern markets. The bridge is significant for its association with the development of rail transportation in the county as well as the state (Criterion A). Abandoned in the 1980s, the bridge exhibits signs of serious deterioration but its integrity of location, design, materials, feeling and association remain intact. The railroad bridge over Wills Creek at Locust Grove illustrates distinctive characteristics of type, period and method of construction.

N.B. To ease flooding, CSX is pursuing the demolition of the bridge. It appears that MHT does not have a regulatory handle on the demolition. We recommended that the bridge be recorded prior to demolition.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

The Eckhart Branch Railroad Bridge is significant in architectural, engineering, and industrial history as a rare example of a mid-19th century, masonry, arched bridge, a type of construction once found more commonly prior to the later 19th century proliferation of iron bridges. Built by the Maryland Mining Company around 1845, the four-span bridge was associated with the development of the coal mining industry in western Maryland.

AL-V-B-152  
Eckhart Branch Railroad Bridge

On the 7th of April in 1845 the Maryland Mining Company broke ground for the construction of a railway from Eckhart Mines to the Cumberland and Pennsylvania Railroad's Mount Savage line on the northern side of Wills Creek at the Narrows. The most interesting feature of the Eckhart Branch railroad is the masonry bridge across Wills Creek where it joined the Cumberland and Pennsylvania line. The bridge consists of four elliptical brick arches with gauged brick borders. Walls of the bridge are laid in english bond with pilasters at the piers. It rests on three stone piers and stone abutments. Although it is the oldest standing railroad bridge in Allegany County and in poor condition, the brick bridge is still in use serving local industries.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The bridge consists of four elliptical brick arches with gauged brick borders. Wall are laid in english bond and wall features include brick pilasters located above the piers. A stone railing is raised approximately one-half foot above the deck of the bridge. It rests on rectangular stone piers with rounded ends and cement fenders which absorb the force of water, striking debris, and ice. The stone abutment on the north is in relatively good condition. The southern abutment and a small part of the northernmost arch have been partially obscured by construction of Route 36. The bridge and a small part of the railroad are still in use serving local industries.
