Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

Building No. 81 is located in the western section of the Yard, parallel to and directly north of Building No. 80. In size and form, Building No. 81 appears a mirror image of its southern neighbor. The most significant difference is in building material. This building has exterior walls of concrete block set between the wood columns, to which wood battens are attached, dividing the building into fifteen bays. This is not the original exterior finish, which was wood beveled siding. Five wooden, sliding, board-and-brace doors were originally located in the building's south facade. Only one of these openings remains and its metal door is not original. Structurally, this building appears in good condition, but the adjacent loading platform is badly deteriorating.

8. Significance

Survey No. AA-2149

Period	Areas of Significance—Check and justify below			
<input type="checkbox"/> prehistoric	<input type="checkbox"/> archeology-prehistoric	<input type="checkbox"/> community planning	<input type="checkbox"/> landscape architecture	<input type="checkbox"/> religion

Level of Significance: <input type="checkbox"/> national <input checked="" type="checkbox"/> state <input checked="" type="checkbox"/> local		

Prepare both a summary paragraph of significance and a general statement of history and support.

This property is associated with the development of the Coast Guard Yard at Curtis Bay. The Yard was first established on this site in 1899 as a boat repair and construction facility for the Revenue Cutter Service, the forerunner of the present-day Coast Guard. At that time, the facility was known as the Revenue Cutter Service Depot, and generally served vessels stationed in the mid-Atlantic area.

The establishment of the Depot was related to the emphasis on Naval preparedness that took place following the Spanish American war. Prior to the establishment of the Depot, vessel repair and construction were handled by private concerns. Starting as a collection of a few frame buildings, the Depot, after 1940 known as the Yard, expanded as its mission and capabilities increased. The Yard was at its productive peak and greatest size during World War II, with most surviving historic structures dating to that time.

Building No. 81, and its southern neighbor No. 80, were constructed in 1942 by the McLean Contracting Company. The tracks located between these buildings provided direct access to the Baltimore and Ohio Railroad. Buildings Nos. 80 and 81 were part of a World War II-era development of the western section of the Yard.

This resource is not included in the proposed National Register Historic District.

Due to loss of integrity resulting to from inappropriate alterations and segregation from railway access, this building is not included in the proposed historic district.

Criterion A—Historical Associations

This building was constructed during World War II and is associated with the major rebuild, expansion, and modernization effort taking place at that time. Furthermore, its location directly adjacent to railroad tracks, indicates the growing importance of the railroad in facilitating Yard operations during this period.

Criterion C—Design Significance

When originally constructed, this building was typical in design and construction of utilitarian architecture of the period. Its orientation and placement are a result of its relationship with the railroad.

Integrity

Extensive alterations and remodeling, including the replacement of all original exterior finish and alterations

to original fenestration patterns, as well as nearby construction that blocks the former rail access, undermine this building's ability to communicate its historic associations and architectural significance.
