

Maryland Inventory of Historic Properties
Addendum

MIHP Number: B-2334

Property Name: Rottholz Bros. Clothing Co./Virginia Peanut Co. Building
Property Address: 515 W. Lombard St., Baltimore, MD 21201

Based on a site visit conducted on December 14, 2005 by John Milner Associates, on behalf of Maryland Mass Transit Administration (MTA), this property is no longer extant.

CAPSULE SUMMARY
The Rottholz Brothers Clothing Company Building
(The Virginia Peanut Company Building)
515 West Lombard Street (B-2334)

The building at 515 West Lombard Street was constructed in 1906 by Julius Rottholz as an industrial processing and warehouse building for the Rottholz Brothers Clothing Company. The Italianate-style building continued to serve as a clothing manufacturing plant until 1920, when it was converted by the Rottholz family into the Virginia Peanut Company candy factory. Eventually sold out of the Rottholz family, the building continued to function as the home of the Virginia Peanut Company until 1986. Due to the building's location at the center of the University of Maryland at Baltimore campus, it was leased and subsequently purchased in 1990 by the State of Maryland for use in the university system. Located between the North and South Loft Districts of the National Register (designated 1985), the Rottholz Brothers Building survives today as an intact example of the industrial processing and warehouse structures commonly constructed in Baltimore at the turn of the 20th century.

Set upon a slightly raised brick and stone foundation, the Rottholz Brothers Building is an attached structure presented in an urbane Italianate-style of architecture. It stands three stories in height and is four bays wide with side- and central-entries. Constructed of brick, the structure has a pressed brick facade laid in all stretcher bond, while the rear wall is laid in five-course American bond. A heavy stone entablature marks the first story, while a narrow cyma reversa-molded cornice of limestone extends across the roofline of the building. It is covered by a sloped roof, clad in a composite material. Brick chimneys projects from the southeast and southwest corners. As originally constructed, the building had a one-story ell of brick, which was demolished in the late 1980s.

=====

Applicable National Register Criteria (Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing)

- A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B Property is associated with the lives of persons significant in our past.
- C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations (Mark "X" in all the boxes that apply.)

- A owned by a religious institution or used for religious purposes.
- B removed from its original location.
- C a birthplace or a grave.
- D a cemetery.
- E a reconstructed building, object, or structure.
- F a commemorative property.
- G less than 50 years of age or achieved significance within the past 50 years.

10. Geographical Data
=====

Acreage of Property 3224 Square Feet

Verbal Boundary Description (Describe the boundaries of the property.)

The building at 515 West Lombard Street is located in Ward 4, Section 8, Block 630, on the northernmost 104 feet of Lot 10. It is on the south side of West Lombard Street, approximately midpoint between South Paca and South Greene streets.

Boundary Justification (Explain why the boundaries were selected.)

The building designated as 515 West Lombard Street has been historically associated with the northernmost portion of Lot 10 since its construction in 1906.

=====
The building at 515 West Lombard Street, historically known as the Rottholz Brothers Building, was constructed in 1906 as an industrial factory. The building is a three-story brick structure designed in an urbane Italianate-style of architecture. Constructed within a historically residential block at the edge of the University of Maryland at Baltimore campus, the building capitalizes on its architectural detailing, including continuous limestone lintels and massive entablature, to harmoniously contribute to a highly developed neighborhood. Maintained under the same owner for over forty years, the Rottholz Brothers Building maintains its original architectural detailing on both the exterior and interior, despite no longer being utilized as an industrial factory.

SITE

The imposing three-story brick building at 515 West Lombard Street is located on the south side of the street between Paca and Greene streets. It fronts on West Lombard Street, directly across from Davidge Hall (1812). The attached industrial building currently abuts its neighbor at 517 West Lombard Street on the west elevation, while 513 West Lombard Street is attached on the east elevation. The rear of the Rottholz Brothers Building is exposed on two elevations as it extends to Lemmon Street, an 18 foot wide alley.

EXTERIOR

Set upon a slightly raised brick and stone foundation, the Rottholz Brothers Building is an attached structure presented in an urbane Italianate-style of architecture. It stands three stories in height and is four bays wide with side- and central-entries. Constructed of brick, the structure has a pressed brick facade laid in all stretcher bond, while the rear wall is laid in five-course American bond. A heavy stone entablature marks the first story, while a narrow cyma reversa-molded cornice of limestone extends across the roofline of the building. It is covered by a sloped roof, clad in a composite material. Brick chimneys projects from the southeast and southwest corners. As originally constructed, the building had a one-story ell of brick, which was demolished in the late 1980s.

The facade (north elevation) is divided into four bays with two commercial entries on the first story and regularly spaced openings

Baltimore, Maryland
county and state

=====

on the upper levels. As originally constructed, the building was used by two separate industrial companies; hence the need for two entries. The first story, set on a granite base, consists of a side entry door and a centrally placed entry flanked by show windows. The two bays of the first floor are edged by granite bases and brick Tuscan pilasters that extend to the stone entablature above. The side entry, located in the eastern bay, is filled with double doors of metal with a single light each. The doors are made operable by spring-hinged hardware with ball tips. The large rectangular transom contains one-light and is obscured by a metal screen. The western bay contains double doors of wood with two-light each. The entry is surrounded by commercial show windows that have been partially covered with formica. The base of the windows is finished with recessed panels (now covered with plywood) that operated as hopper windows to allow ventilation into the building. Above the windows and door are triple transoms with two-lights and metal screens. The openings are edged with round-edged surrounds and have mullions of wood.

The first story is marked by a heavy stone entablature that served as the name plate for the Virginia Peanut Company in 1920. The fillet and scotia molded entablature incorporates the capitals of the Tuscan pilasters that separate the bays of the first story. The capitals are embellished with coved plaques.

The second and third stories of the facade have four openings each. They are filled with large 2/2 windows with square-edged surrounds. The openings on the second story are grouped together by a continuous granite sill set directly above the entablature, while the third story openings have granite slip sills. The top of the windows on both stories are marked by continuous stone lintels with keystones and wood surrounds of a single large bead. A projecting stringcourse, comprised of two courses of brick, is located above the third story. A cyma reversa stone cornice extends the width of the facade. The damaged condition of the bricks above the stone cornice indicates an applied cornice once crowned the roofline of the buildings.

The south rear elevation of the Rottholz Brothers Building is four bays wide and constructed of five-course American bond brick. The first story, originally extending 175 feet in depth to Lemmon Street, was significantly altered in the late 1980s by the removal of the one-story ell. Subsequently, the first story has been covered with plywood which has a single flush door with square-edged surrounds. Portions of the west and east brick side walls of

MARYLAND INVENTORY OF HISTORIC PROPERTIES
CONTINUATION SHEET

Inventory No. B-2334

Section 7 Page 3

Rottholz Brothers Building
name of property

county and state

=====

the one-story ell are still present. The second story has four elongated openings with granite sills. Three of the openings are encased by metal shutter, while the eastern-most opening is covered with plywood. Similarly, the third story has four openings with granite sills that have been encased with metal shutters. The roofline of the south rear elevation is defined by a corbelled brick cornice.

The southern portion of the east side elevation is exposed, displaying the outline of rear additions constructed and subsequently removed from the building at 513 West Lombard Street.

INTERIOR

The interior of the Rottholz Brothers Building is entirely open, divided only by round and square supporting post of metal. The first floor, sloping slightly to the rear of the building, has exposed brick walls and joists. The floor is covered with two layers of wood boards. The window and door openings are trimmed with reeded wood casing. Hanging florescent lights has been installed.

A beaded board dividing wall originally separated the side entry and main straight-flight stair from the main portion of the first and second floors. This dividing wall has been partially removed and is extant at the ceiling only.

An elevator shaft, providing access to the basement and upper floors, is located at the northern end of the east wall. The shaft is encased with beaded boards and metal screens. To the south of the elevator is a straight-flight stair. The stair, which leads to all of the upper floors, has an enclosed beaded balustrade. A second straight-flight stair, leading only to the second floor, is located in the southeast corner of the first floor. Six evenly spaced metal columns run the depth of the space, supporting the main joists.

The ceiling height of the first floor is dramatically shortened by an upper floor that has been inserted between the main floors of the building, thus creating four floors. Suspended from the joists of the third floor, the second floor contains office space at the northern end. The office space has a dropped acoustical tile ceiling, fiberboard and glass partition walls, and a carpeted floor. The southern portion of the second floor is open, save the

=====
tops of the metal support columns that extend from the first floor. Serving as workspace, it has narrow wood floorboards that run the depth of the space, plywood walls, and exposed joists.

The third floor, accessible only from the main straight-flight stair on the east wall, extends the depth of the building with partition walls at the northwest corner. The straight-flight stair and the elevator shaft are enclosed with beaded boards. Coupled with the extensive exhaust system that hangs from the ceiling, the partition walls create a rectangular work space, separate from the main space.

The entire room is finished with the original narrow wood floorboards, exposed brick walls, and pressed tin ceiling. The ceiling has a field of alternating rosettes and ribbons with square plates, a leaf-and-dart motif flanking the floral scrolled molding, and a twilled filler. The main joist, supported by round metal columns, is encased in twilled sheets and edged with egg-and-dart molding. Hanging florescent lights have been intermittently placed throughout the space. The window openings have square-edged casing and ogee-molded muntins. A large exhaust hood is located in the southwest corner of the room.

The fourth floor runs the depth of the building with no partitions. The elevator shaft is encased with beaded board and metal screens. The stair is surrounded by a solid beaded balustrade. The floor is composed of wide wood boards, the walls are exposed brick, and the ceiling is covered with pressed tin. The ceiling has the same alternating rosettes and ribbons with square plates as that found on the third floor. The plates, however, are edged with fleur-de-lis, rope, and wide floral and ribbon plates. The twilled field is edged with egg-and-dart molding. The main beam, supported by square wooden posts, is covered with twilled metal sheets. The ceiling is pierced by two hipped skylights of wired glass. Hanging florescent lights have been installed throughout. Large "Modine" heaters and fans are hanging from the ceiling. The metal wheels of the fans are embossed with the words: "VARIETY IRON WORKS, YORK, PA."

The basement of the building, presently accessible through the shaft of the elevator, has a poured concrete floor, brick piers supporting the beams and joists, and exposed brick walls. Originally extending south to the one-story ell, the basement has been reduced in size by the insertion of a concrete block wall.

The building at 515 West Lombard Street was constructed in 1906 by Julius Rottholz as an industrial processing and warehouse building for the Rottholz Brothers Clothing Company. The Italianate-style building continued to serve as a clothing manufacturing plant until 1920, when it was converted by the Rottholz family into the Virginia Peanut Company candy factory. Eventually sold out of the Rottholz family, the building continued to function as the home of the Virginia Peanut Company until 1986. Due to the building's location at the center of the University of Maryland at Baltimore campus, it was leased and subsequently purchased in 1990 by the State of Maryland for use in the university system. Located between the North and South Loft Districts of the National Register (designated 1985), the Rottholz Brothers Building survives today as an intact example of the industrial processing and warehouse structures commonly constructed in Baltimore at the turn of the 20th century.

SITE HISTORY

The Rottholz Brothers Building, located at 515 West Lombard Street, was strategically located directly across from Davidge Hall, constructed in 1812 to the designs of Robert Cary Long, Sr. as the main university building for the College of Medicine of Maryland (later University of Maryland at Baltimore). The rectangular parcel, extending to Lemmon Street, was historically the site of a three-story townhouse, dating from the early to mid-19th century. The single-family dwelling was owned and occupied by Michael S. Levy and his wife, who sold it to Julius Rottholz in 1904. Rottholz demolished the dwelling in the fall of 1904 to allow for the construction of the industrial Rottholz Brothers Building.

BUILDING HISTORY

Julius Rottholz and his brother Solomon constructed the three-story building at 515 West Lombard Street in 1906 as an industrial processing factory and warehouse for their cloth sponging and shrinking company. The Rottholz Brothers company occupied the basement and first floor of the building, while Branch K of the Stuart Keith and Company leased the second and third floors. One of Baltimore's largest garment manufacturing companies with numerous branch offices throughout the city, the Stuart Keith and Company produced overalls, underwear, and pants.

Following the death of Julius Rottholz in May 1920, the building

=====
was devised to his wife and children. The heirs closed the cloth
sponging company and rehabilitated the building for use as a candy
factory. Known as the Virginia Peanut Company, the factory grew to
become one of Baltimore's largest candy manufacturers. The
children of Julius Rottholz operated the Virginia Peanut Company at
515 West Lombard Street until 1943, at which time the entire
company, including the building, manufacturing implements, and
supplies, was sold to Ernest S. Vandora and William C. Gereny.
Despite the sale, the three-story, Italianate-style building
continued to function as the home of the Virginia Peanut Company
for approximately thirty years. In 1970, William C. Gereny sold
his one-half interest in the company to Ernest S. Vandora and his
wife Ann. The Paca-Pratt Limited Partnership, later known as the
513-515 Association Limited Partnership, purchased the building
from the heirs of Ernest Vandora in 1984, closing the candy factory
two years later. Vacant for several years, the Rottholz Brothers
Building was sold in 1990, along with the dwelling at 513 West
Lombard Street, to the State of Maryland for use by the University
of Maryland at Baltimore (UMAB). The building was used by UMAB as
a storage warehouse until it was vacated in the spring of 1996.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

This common bond commercial building with a 1st floor storefront is three stories high and 4 bays wide. Symmetrical fenestration punctuates the facade.

The four rectangular windows on each floor, double hung with 2/2 lights, are underlined by stone sills and capped by stone Jackarch lintels with keystones. They are united by skew blocks of the same material.

The first floor storefront entrance is composed of double doors with 2/2 glass panels. Like the large, flanking display windows, it is capped by a bipartite glass transom. To the left of this grouping is another wooden glass paneled double door panels which offers access to the upper floors. A high wooden sign advertising the concern functions as a 1st floor cornice.

The 2nd floor sills appear as a single stone belt course, as they are interspersed with banding of the same material.

The vertical lines of the building are subdued by brick string courses above the 3rd floor windows, and by stone cyma molding below the roofline, which lacks a cornice.
