Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of nine two-story, two-bay wide houses early Italianate-style brick houses with shed roofs and simple, scroll-sawn bracketed cornices were built in 1871 by Samuel W. French, a local builder of working class houses in East Baltimore. Some of the houses retain their original brick facades, which have been painted, but others have been covered with formstone.

The houses are two stories in height, 13' wide and occupy lots 55' deep. Each house is two rooms deep and there is no backbuilding. The houses are constructed in common bond and were originally painted. Each house has a single hooded chimney located at the rear corner of the house. The shed roofs are capped by a continuous wooden cornice consisting of a crown molding supported by simple block modillions set above a plain frieze area. The window and door openings have flat wood lintels and sills. All of the openings are boarded over but the original sash would have been 2/2, an example of which survives in the contemporaneous row to the north. The houses sit on low basements, lit by a single-light sash. Each house is reached by one or two concrete steps.

Specific dates 1871

Builder/Architect Samuel W. French

Prepare both a summary paragraph of significance and a general statement of history and support.

This simple form of small street house is typical of those built in the 1870s, often in neighborhoods of predominantly three story houses, like Union Square or the nearby Madison Square. This group of houses is significant as representing a very plain type of small street house that was constructed to serve as rental housing for the working class residents of the area, most of whom were German at the time of construction.

The houses were built by Samuel French, a local builder, according to a pattern that was quite common to the city's new neighborhoods of the 1870s and 1880s. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and north-east of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide three-story houses on the main streets, and smaller, 11' to 13'-wide two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell for \$2,000 - \$3,000; small street houses for \$ 700 - \$900.

In this particular case French sold the houses to a variety of investors interested in their rental income. In this way people of varying means could afford to live in the same block. If they couldn't afford the approximately \$750 purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

Samuel French also built thirteen similar houses on the east side of Chapel St. and the seven three story houses on the west side of Washington Street, just to the east of the former row.
