Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This group of fourteen two-bay-wide brick houses are primarily two-story-and-attic houses typical of a popular type of Baltimore rowhouse built in the late 1840s and 1850s to serve the city's growing working class population. The lower-pitched gable roof allowed for a more spacious upper story, which now could be lit by small rectangular windows at both the front and rear of the house, instead of the earlier dormer windows. Despite its practical nature, this new feature had its roots in a stylistic change in Baltimore's fashionable housing, the small "attic" windows being an important part of the façade design of much larger town mansions being built in the new Greek Revival style. 309 – 311, 313, and 321 are two-story, gable-roofed houses, a common type of small street house built in the 1850s and 1860s; 319 and 323 were originally two-story-and-attic houses which had their roofs raised to a full three stories.

The houses are mainly two-and-a-half stories in height. 303 – 307 are 12'4" wide with the end house being 14' wide to serve as a combination storefront/residence and occupy lots 68'6" deep; 309 – 311 are 12' wide and occupy lots 62'6" deep; 313 – 323 are 10' and 11' feet wide, with end houses 14' and 15' wide, and occupy lots 49'6" deep; 325 – 329 are 10', 10'7", and 10'6", respectively, and occupy lots 56' deep. Each two-room deep house has a one-story brick rear kitchen addition somewhat narrower than the house.

The houses are constructed in common bond, but most have been covered with formstone. The low-pitched gable roof has a simple corbelled brick cornice. The roofs are covered with modern asphalt shingles overtop the original cedar shakes. There is a double chimney located at the peak of the gable roof. Each house also has a chimney at the rear of the kitchen addition.

The door and window openings have splayed brick lintels on the first floor and flat wood lintels on the second and attic stories. All of the sills are wood. The window openings are filled with either 6/6 sash or 1/1 replacement sash. All of the original doors have been replaced with a variety of replacement door types set beneath single light transoms. The houses sit on low basements and each entrance is reached by a single concrete or brick step. 313 S. Durham St. is an exception—it sits on a much higher basement lit by a wide, single-light sash, and its entrance is reached by four brick steps, set parallel to the façade.

The houses are two rooms deep, with the front room being entered directly from the front door. The front and back rooms of the first floor are separated by a wide opening, with the tightly winding, narrow stairs set in the rear room, in the space between the partition wall and the fireplace. There are two bedrooms on the second floor of the main part of the house, each with a fireplace. The third floor attic rooms have low sloping ceilings, with a maximum ceiling height of about seven feet at the peak of the gable sloping down to about four feet at the front and rear of the house. The one-story rear addition served as the kitchen, with its own cooking fireplace.

Specific dates c. 1845 - 1855

Builder/Architect

Prepare both a summary paragraph of significance and a general statement of history and support.

This row of houses is significant as being representative of a large group of such houses built in the 1840s and 1850s to accommodate the growing labor force centered around the Baltimore waterfront. Although showing stylistic influences from Greek Revival style buildings constructed in Baltimore in the 1830s and 1840s (in the proportions of the attic windows, the chaste exterior details, and the double parlor floor plan), the outstanding feature of these houses is their extreme simplicity of design and detailing. They are practical adaptations of a current mode of building, designed to meet the need for efficient, low-cost housing for a growing working class community. The floor plan is essentially the same as that of the earlier Federal-style two-and-a-half story houses, but the opening between the two rooms is wider, reflecting popular Greek Revival tastes. The increase in height of the third story (from a dormer story to an attic story) allowed the third story to be divided into two separate rooms, in place of the one open room of the dormer story, thus providing welcome additional private living space to large families or those who had to take in boarders. The houses do not differ markedly from similar two-story-and-attic houses built on nearby main streets—they are simply somewhat narrower versions priced to serve less affluent residents of the old walking city.

These particular houses were built at a time when Fells Point was already an important ship building center for the growing town of Baltimore. Early occupants included people involved in the maritime trades, small-scale craftsmen, and laborers who made their homes in the smaller scale and more affordable housing located on the small "alley" streets of Fells Point. Until about 1850 Durham Street was known as Happy Alley and its occupants were racially mixed.
