Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of six two-story, two-bay wide Italianate-style brick houses with shed roofs and wooden scroll-sawn bracketed cornices were built c. 1885. All of the houses retain their original brick facades, which were always painted a dark red, as they are today.

The houses are two stories in height, only 11' wide and occupy lots 50' deep. Each house is only two rooms deep, with the kitchen located in the tall basement. Because of the steep grade of the slope, the basement kitchen opens directly out into the rear yard. The houses are constructed in common bond and were originally painted. Each house has a single hooded chimney located at the rear corner of the house. The shed roofs are capped by a wooden cornice consisting of a crown molding supported by two long scroll-sawn end brackets, decorated with grooves. The frieze panel, which also serves as ventilation for the attic, is decorated with a row of fan-like shapes, created with a jig saw. A tiny, scroll-sawn bracket marks the center of each frieze panel.

The tall, narrow window and door openings have segmentally arched brick lintels, composed of a double row of headers, and brick sills. All window openings are filled with 1/1 replacement sash. Doorways have single-light transoms and a variety of replacement door styles. At street level the entrances are reached by a single step, or directly from the street. The basement kitchen opens out to the rear yard.

8. Significance

Specific dates c. 1885

Builder/Architect

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of houses significant as representing the level of architectural stylishness builders were willing to give to small street houses in the late nineteenth century and is testament to the fact that their was no stigma attached to small street living. The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the period c. 1870 to 1910. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and northeast and southwest of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide three-bay-wide, two-story houses on the main streets, and smaller, 11' to 13'-wide two-bay-wide, two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell for \$1,200 - \$1,500; small street houses for \$700 - \$900.

Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties. In this way people of varying means could afford to live in the same block. If they couldn't afford the approximately \$750 purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The houses are especially significant because of their proximity to the slaughterhouses of southwest Baltimore and their related industries, particularly the William Wilkens & Co. Curled Hair Manufactory, one of the largest employers in the area. A number of German-American owned breweries were also located in this section of the city. Moderately-priced housing was built to provide homes for the mainly German immigrants who came to southwest Baltimore to work in these rapidly expanding industries in the decades after the Civil War.

9. Major Bibliographic References
