Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of ten two-story, two-bay wide Italianate-style brick houses with shed roofs and wooden scroll-sawn bracketed cornices were built c. 1880. Seven of the houses retain their original brick facades, which were always painted; the remainder have been covered with formstone.

The houses are two stories in height, 14' wide and occupy lots 58' deep. Each house is two rooms deep and there is no backbuilding. The houses are constructed in running bond and were originally painted and striped. Each house has a single hooded chimney located near the front and rear of the house. The shed roofs are capped by a wooden cornice consisting of a crown molding supported by a row of scroll-sawn modillions set against a plain wooden frieze area.

The first floor window and door openings have splayed brick lintels; those on the second floor have narrow wood lintels. The sills are wood. Window openings are filled with 1/1 or 6/6 replacement sash or are boarded over. An elegant original doorway enframing survives at 1902 Lemmon St. It has a flat, projecting pediment supported by two scroll-sawn brackets. The transom and doorway, however, have been boarded over. The houses whose openings are not boarded over have single-light transoms and modern replacement doors. The houses sit on fairly low basements, marked by a water table consisting of three projecting rows of stretcher bricks and lit by a single-light sash. Each house is reached by three concrete steps.

8. Significance

Period	Area of significance	check one & justify

Specific dates c. 1880

Builder/Architect

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of houses significant as representing the level of architectural stylishness builders were willing to give to small street houses in the late nineteenth century and is testament to the fact that their was no stigma attached to small street living. The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the period c. 1870 to 1910. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and northeast and southwest of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide three-bay-wide, two-story houses on the main streets, and smaller, 11' to 13'-wide two-bay-wide, two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell for \$1,200 - \$1,500; small street houses for \$700 - \$900.

Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties. In this way people of varying means could afford to live in the same block. If they couldn't afford the approximately \$750 purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The houses are especially significant because of their proximity to the slaughterhouses of southwest Baltimore and their related industries, particularly the William Wilkens & Co. Curled Hair Manufactory, one of the largest employers in the area. A number of German-American owned breweries were also located in this section of the city. Moderately-priced housing was built to provide homes for the mainly German immigrants who came to southwest Baltimore to work in these rapidly expanding industries in the decades after the Civil War.
