DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

The Lake Clifton Valve House, or Gate House, is a massive octagonal stone structure. Large Romanesque archways alternate with Gothic style windows which once contained stained glass. Remnants of the colorful glass patterns may still be seen in the turret, atop an intricate tile roof supported by a complicated system of iron trusses. The interior contains the wheels by which the water gates were opened and closed. There is also a marble tablet inside which commemorates the completion of the Lake Clifton project in 1888.

The Valve House stands at the juncture of two tree-lined drives, constructed at the same time, to afford the Victorians a fine carriage ride around the lake and a vantage point from which to view the entire eastern section of the City.

A thorough search of City records has failed to reveal the name of an architect for the building, although the engineers for the project were Edward Heffner, Jr., Samuel W. Knapman and Charles A. Hook. In all probability, the style of the structure was copied from a similar building or a sketchbook of architectural studies, as was usual in those days. (A detailed description of the Lake Montebello Valve House, which closely resembles this one, is included in the Water Department report of December 31, 1878.)

The exceptional quality of this building results not only from its unique design and sturdy construction, but more from the fact that it is one of the few remaining relics of an era when men of imagination ventured to create a temple to fill a mundane need.

STATEMENT OF SIGNIFICANCE

The Valve House (Gate House) at Clifton Park is one of several unique structures built by the Baltimore City Water Department during the period of its expansion in the late 1800's.*

Following several periods of drought, the State Legislature appropriated \$4 million to dam the Gunpowder River at Loch Raven and bring water through a tunnel into the north-eastern section of the City. This project, begun in 1876, was scarcely underway when it became evident that the capacity of the distributing reservoir (Lake Montebello) was insufficient for the rapidly increasing needs of Baltimore City. A second reservoir was necessary and it was located at Clifton, the summer home of Johns Hopkins, less than a mile south of Montebello.

The new Lake Clifton and its gate chambers were completed in 1888. The Water Department annual report for that year states that water was let into Lake Clifton on December 27, 1888 and that the "gatehouse is completed and is now in working order."

In 1894, Clifton was purchased by the City for a park and the reservoir remained in service until it was no longer needed. In 1968, the lake was drained and filled as the site of a new senior high school. At the present time the only vestige of Lake Clifton remaining is the old Valve House, a remarkable Victorian structure still housing the machinery of a bygone age.

* Other interesting structures are located at Lake Montebello and at the Druid Hill Park reservoir.
