

ADDENDA

In 1984 the Department of Natural Resources contracted with Joe Getty to conduct a follow-up survey of selected historic properties on DNR lands. DNR funded the field survey and photography but did not prepare finished copy. The attached photocopy pages were forwarded to the Maryland Historical Trust to supplement existing files. All original material and photographs remain in the possession of the Department of Natural Resources under the supervision of Ross Kimmel (x3771).

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

Griggs house is a two-story, gable-roof (ridge parallel to facade), stuccoed frame house--three bays on facade, entrance in the south bay--with central gable dormers front (east) and rear (west). Original sash was 6/6.

There is a small pedimented porch at the entrance, a long hipped roof porch on the north, and a simple wooden cornice under the major eaves. Proportions and sparse detail are classical. Interior is a side-hall plan with simple Victorian stair details. Most of the remaining woodwork appears to be late Federal/early Classical. Large double parlor doors on the first story are 8 panel, hinged rather than sliding.

SPECIFIC DATES before 1817 BUILDER/ARCHITECT

STATEMENT OF SIGNIFICANCE
 (See Smith House/Sumwalt House BA-1528, DNR-135 - Patapsco)

This house probably illustrates an improvement in the condition of the homestead on which the neighboring Smith house was built. Characteristics of the house suggest a very early Victorian building date.

DRAFT--GRIGGS HOUSE

The Griggs House is a two-story, three-bay by two-bay frame structure on a stone foundation. The house has a gable roof with a single gable dormer. There is a one-story rear addition. The key characteristics of the house ^{are} ~~is~~ its Federal style use of details such as the symmetrical facade, the interior floor plan, and the window and mantel designs. From these details and construction techniques, the house appears to have been built in the mid-nineteenth century. Early twentieth century remodeling includes the covering of exterior ^{with} ~~a~~ stucco.

The Griggs House is located on Herⁿwood Road, approximately one quarter mile north of Old Court Road, northwest of Granite, Baltimore County. The house is sited on a prominent slope in the gently rolling countryside. A short distance west of the house is the Smith/Sumwalt House. It appears that both houses were in the same family's ownership during the late nineteenth century.

The Griggs House is a two-story, three-bay by two-bay frame structure on a stone foundation. The foundation is slightly elevated above ground level and has two-pane windows located on the south and west sides of the house. There is also an exterior foundation entrance on the west facade. The main facade of the house faces south and is symmetrically arranged with an entrance in the westernmost bay ^{and} ~~is~~ six-over-six windows in the other bays of the first and second stories. The entrance has a one-bay, one-story porch with a pedimented roof. The door has four-panel trim and a molded frame with a bead edge. The six-over-six windows

are double hung sash with bead edge frames. There is a box cornice and a single pedimented gable dormer is located on the roof. The gable roof of the structure is covered in asphalt shingles. There is a brick chimney stack that rises on the northern side of the gable roof.

The west gable end has a single window in each story and a six-over-six sash window in the gable. The east gable end has two windows on each story and a six-over-six sash window in the gable. The east gable end also contains a full-length, one-story porch.

The north end of the structure contains a one-story addition with a shed roof. This addition has a door and a window on both the east and west facades. The north facade has two windows and ~~then~~ an interior-end brick chimney. The north facade of the main section of the house has two windows on the second story.

The building is constructed of a post and beam frame on a stone foundation. The interior walls are plastered and materials used included machine-sawn lathe and machine-made nails. The floors are random width wood floors supported on log joists. The exterior was originally covered in weatherboard siding but now contains stucco applied over chicken wire nailed to the weatherboard. The foundation is constructed of cut-stone and the main porch has large granite steps. The interior has a side hall plan with two rooms in the main section off the hall. The stair hall is quite wide and contains a late nineteenth century ~~h~~ newel post

handrail and balusters. The ~~scull~~ room of the original section is plainly designed with a baseboard, molded window frames, and a wide door between the front room and the parlor. The parlor contains a fireplace mantel and a built-in cupboard. The mantel has a molded shelf with a molded panel below it and unadorned pilasters. The room in the addition was used as a kitchen and has a pressed tin ceiling.

Statement of Significance.

The Griggs House shows the application of Federal style architectural characteristics to regional farmhouse construction in the Maryland Piedmont. The house is symmetrical facade, porch details, room plan, and wood ornamentation display characteristics frequently found in urban Federal design. However, the structure has been extensively remodeled and later vandalized. Remodeling has included the addition of a late nineteenth century stairway and the exterior covering in stucco. Vandalism has accounted for the breakup of the interior architectural fabric of the structure including the removal of the mantel piece on the second story and of several window frames.
