

CAPSULE
400 W. PENNSYLVANIA AVENUE

Dr. Grafton M. Bosley was initially responsible for the residential development of west Towson. He was a prominent land owner who is especially noted for having donated part of his estate for the site of the Court House and Jail in 1853. By 1899, Bosley Avenue, Allegheny Avenue, W. Pennsylvania Avenue, W. Chesapeake Avenue, Highland Avenue, and later Central Avenue were laid out for accessibility to lots ready for public development.

Presently, areas such as west Towson are seeing the commercial growth of central Towson slowly creeping into their neighborhood. This house, however, has remained residential and retains most of its original fabric. This is an especially good example of late Victoriana. It combines the features of the Queen Anne Style which include various surface materials, projections and different rooflines with the Japanese influence of the Shingle Style which can be seen in the wood shingles and concave shapes.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

Exterior Only:

This house on the corner of Pennsylvania and Central Avenues is very distinguishable among its neighbors. It is one of the earlier houses in the area and contains several features representative of the late Victorian period.

The 2 story frame structure with an attic rests on a stone foundation and is topped with an equilaterally hipped roof with very deep eaves. The exterior walls are covered with thin german clapboards, the roof with slate. The fenestration is a regular 6/1 sash with louvered shutters. The building is the equivalent of three bays square.

The south facade is the main facade. Because this house was observed from the street only, bushes and trees obscured detail features. However, it is observed that the first story is covered with a full hipped-roof porch supported by square columns and surrounded by a balustered railing. The entrance door is off center to the west and has side lights and transom. The east bay is occupied by a swell front which can be seen clearly on the second story. This polygonal projection is topped with a gabled roof which is vented by a six light casement window. Most interesting is that this gable is covered with brown wooden shingles and the gable sides have a slight concave curve. This characteristic is repeated on several other features of the house and is reflective of the Japanese influence on the Shingle Style. There is a concave-shaped dormer with two 8 light casement windows and a hipped roof. This too is covered with wooden shingles and occupies the west bay of the roof.

The porch of the south facade was at one time a wrap around as is characteristic of a corner lot house. However, the porch has been enclosed on the east facade and occupies one-half of the first story. The northernmost bay contains a polygonal bay window topped with a hip-like hood. Only the outer bays of the second level are occupied by window.

A large centrally located gable dormer sits atop the roof and is again characterized by the concave slant of the sides and is covered with wooded shingles. It is vented by two 6/1 sash windows. This dormer gives the facade a unique appearance because the gable end itself is concave, a flue chimney pierces the ridge and the shingles between the windows have been designed to form a diamond shape.

The north facade too contains a polygonal bay window in the westernmost one-half of the first story. All three bays are occupied by windows on the second level. The roof contains a centrally located dormer similar to the one on the south facade.

The west facade could not be seen.
