Description of Property and Justification: *(Please attach map and photo)*  
 The Overlea Survey District is located within the community of Overlea in portions of both Baltimore County and Baltimore City. The district is comprised of five early twentieth century subdivisions, Overlea, Overlea Manor, the Addition to Overlea, Overlea Park, and Cherry Heights. Development within these five subdivisions formed the core portions of what became the suburban community of Overlea. Belair Road (US 1) bisects the center of the district, and is a mix-use residential-commercial corridor consisting of many early twentieth century houses that have been converted to commercial use and post 1960 commercial development.

The original "Overlea" subdivision, located northwest of Belair Road, is laid out in a grid pattern. Northwest-southeast-extending streets within the subdivision (Pinewood Avenue, Fleetwood Avenue, Northern Parkway, W. Overlea Avenue, Chesley Avenue, and Walnut Avenue) bisect northeast-southwest extending streets (Brook Avenue, Rosemont Avenue, Cedona Avenue, Ashley Avenue, and Spruce Street). Located north of this area is Overlea Mannor, which contains three northwest-southeast streets (W. Elm, Manor, and Fuller Avenues) and one cross street, Highview Avenue, which intersects with these streets, ending at Taylor Avenue. The portion of the Overlea Survey District southeast of Belair Road includes all of the subdivisions known as the "Addition to Overlea," Overlea Park," and "Cherry Heights." This portion of the district located between Kenwood Avenue and

Fullerton Avenue contains two long northeast-southwest extending streets (Linden and Beech Avenue), which are intersected by irregular patterns of southeast-northwest-running streets, which include Maple Avenue, E. Overlea Avenue, Willow Avenue, Madeline Avenue, E. Elm Avenue, Apple Street, Cherry Avenue, Hazel Avenue, and First Avenue. Residential construction is consistent throughout the residential portions of the district on both sides of Belair Road. Early-twentieth-century construction (1905-1940) includes examples of Queen Anne, Foursquare, bungalow, Tudor Revival, Colonial Revival, and vernacular gabled-roof cottages. Later mid-century, residential development after World War II includes examples of two-story, side-gabled dwellings, a few of which contain Tudor and Colonial Revival influences; one-and-a-half story gable-front-and-wing cottages; Colonial Revival, and Cape Cod houses.

The Overlea Survey District contains three previously recorded individual resources and one district. Two of the three individual resources represent churches. St. Michaels the Archangel (BA-2627), a 1914 Romanesque Revival church with 1950 rectory and school, is located at the intersection of Willow Avenue and Belair Road and St. James Lutheran Church (BA-2641), a Gothic style church constructed in 1906 and located at the intersection of W. Overlea Avenue and Belair Road. Built in 1917, The Overlea Waiting Station (BA-2772) is a streetcar station on the line between Overlea and downtown Baltimore. The building, located at the intersection of W. Overlea Avenue and Belair Road, is a rectangular, wood-frame, hipped-roof building with bracketed eaves and an inset porch. Finally, Cherry Heights (BA-3055), or the Overlea African American District, was previously documented during an architectural survey in 2002. This district, which includes all of the Cherry Heights subdivision platted in 1910, was intended as a planned African-American neighborhood and includes various examples of early-twentieth-century-domestic construction representing Foursquare, Queen Anne, bungalow, and Colonial Revival dwellings mixed with later mid and late-twentieth-century construction representing examples of Cape Cod, ranch, and modular houses.

The Overlea Survey District is not eligible for listing on the National Register of Historic Places. The district is primarily associated with the suburbanization of northeast Baltimore during the early and mid-twentieth century. Overlea was one of many street car suburbs that grew up northeast of Baltimore during the early-twentieth century. Other suburbs developed at the same time included Mayfield, Lauraville, Hamilton and Woodhome Heights. There is no evidence to suggest that Overlea possesses any historic distinction apart from typical suburbanization around Baltimore that would warrant sufficient significance to meet Criterion A. Although Cherry Height was originally intended for African American settlement, census research from 1920, 1930, and 1940 has shown African American settlement patterns were limited to only a small portion of Linden Avenue. Census records indicate that Breech Avenue and the other cross streets within the subdivision were settled by "white" working class families, which was typical of settlement patters within neighboring subdivisions.

The Overlea Survey District is not associated with any person or group of persons of outstanding importance to the community, state, or nation, and is therefore not eligible under Criterion B. There were no other groups of significant individuals that lived in the survey district that would provide eligibility under Criterion B. The district was primarily occupied by typical working class families.

The architecture of the district largely represents common forms of domestic property types popularly constructed for working class families during the early and mid-twentieth century. Examples of bungalows and Foursquare dwellings are the most prolific forms of early-twentieth century construction which are intermixed with more elaborate Late Victorian design that include examples of Queen Anne dwellings and vernacular Victorians. Later revival architecture (Colonial and Tudor) appears throughout all five of the subdivisions that comprise the district, as do less elaborate minimal traditional and Cape Cod property types constructed between 1945 and 1955. Other later non-contributing property types that include ranch houses and modern neo-traditional and modular homes are located on redeveloped lots intermixed with the historic period dwellings within the residential areas of the district. Because the architecture of the survey district comprises an eclectic variety of property types from various periods throughout the twentieth century (primarily early and mid-century), the survey district as a whole does not constitute a

MARYLAND HISTORICAL TRUST REVIEW													
Eligibility recommended				Eligibility not recommended									
Criteria:	A	B	C	D	Considerations:	A	B	C	D	E	F	G

collection of significant properties types from any distinct period of construction, nor does the area as a whole contain any significant examples of domestic construction that represent the collective works of a master architect or even developer such as Henry Kolb. For these reasons, the survey district does not comprise any significant collection of property types that would meet Criterion C for architectural significance. The district was not evaluated under Criterion D.

The survey district is also largely comprised of prolific forms of working class housing common among residential development during the early and mid-twentieth century, with many having been altered with the application of non-historic materials (synthetic siding and vinyl windows) and features (enclosed porches and additions). As such, the architecture within the survey district does not represent a distinctive collection of resources to merit consideration under Criterion C. The district was not evaluated under Criterion D.

**Integrity Assessment**

Many of the contributing resources within the Overlea Survey District have undergone significant alterations that have diminished integrity necessary to convey significance. Most of the dwellings within the residential portions of the Overlea Survey District have been altered with the application of non-historic materials that has resulted in significant diminishment of integrity of materials for most buildings within the district. Dwellings commonly have been sheathed in vinyl and aluminum siding or asbestos shingle and have had their original wooden fixed-sash windows replaced with modern vinyl windows. Other notable alterations have diminished design integrity. Many early-twentieth century dwellings have had porch alterations that have included the reconstruction of porches with non-historic wrought iron detailing and even the partial or full enclosure of porches. Additions have been constructed onto a few of the houses, but most notably alongside or the rear elevations.

The most significant changes to the survey district have occurred along Belair Road. Belair Road originally was lined with domestic construction similar to other parts of the survey district. The corridor became increasingly commercialized during the late-twentieth century as large blocks of dwellings were demolished and replaced with post 1950 commercial buildings. The earlier dwellings that were not removed were unsympathetically renovated to commercial use, which often included the construction of storefront additions. While a few examples of early and mid-twentieth-century-domestic construction along Belair Road have survived these changes, the general character of the portion of the survey district now represents a commercial corridor that no longer retains integrity of design, feeling, or association.

**CAPSULE SUMMARY**  
**BA-3297**  
**Overlea Survey District**  
**Baltimore City and Baltimore County, Maryland**

The Overlea Survey District is comprised of five early-twentieth-century subdivisions, Overlea, Overlea Manor, Addition to Overlea, Overlea Park, and Cherry Heights that form the core area of the community of Overlea, which is located along Belair Road (US 1) northeast of Baltimore. Overlea initially developed as a streetcar suburb and grew throughout the early and mid-twentieth century. The district contains residential areas on the northwest side of Belair Road located between Pinewood Avenue and Taylor Avenue, and on the southeast side of Belair Road between Kenwood and Fullerton Avenue. One of the subdivisions within the Overlea Survey District, Cherry Heights (BA-3055) was developed to be an African-American neighborhood. Early twentieth century construction (1905-1940) within the survey district includes examples of Queen Anne, Foursquare, bungalows, Tudor Revival, Colonial Revival, and vernacular gabled-roof cottages. Later mid-century, residential development after World War II includes examples of two-story, side-gabled dwellings, a few of which contain Tudor and Colonial Revival influences; one-and-a-half story gable-front-and-wing cottages; Colonial Revival; and Cape Cod houses. Four churches are also located within the district. The largest of these churches is St. Michael the Archangel Roman Catholic Church (BA-2726), a 1914 Romanesque Revival church with 1950 rectory and school, located at the intersection of Willow Avenue and Belair Road.

Many of the buildings within the Overlea Survey District have seen significant alterations resulting in a diminishment of integrity of materials, design, and workmanship. Most of the buildings have been clad with synthetic sidings (vinyl and aluminum) or asbestos shingles and have had their original fixed-sash wood windows replaced with vinyl windows. Other common alterations have included partial and full porch enclosures and reconstructed porches. The portion of the district along Belair Avenue has seen the most significant changes. This area has been transformed into a commercial corridor with many of the early-twentieth-century dwellings demolished or altered with storefront additions.

Prepare both a one paragraph summary and a comprehensive description of the resource and its various elements as it exists today.

The Overlea Survey District is located within the community of Overlea in portions of both Baltimore County and Baltimore City. The district is comprised of five early twentieth century subdivisions, Overlea, Overlea Manor, the Addition to Overlea, Overlea Park, and Cherry Heights. Development within these five subdivisions formed the core portions of what became the suburban community of Overlea. Belair Road (US 1) bisects the center of the district, and contains a mix-use residential-commercial corridor consisting of many early twentieth century houses that have been converted to commercial use and post-1960 commercial development. The original "Overlea" subdivision, located northwest of Belair Road, is laid out in a grid pattern. Northwest-southeast extending streets within the subdivision (Pinewood Avenue, Fleetwood Avenue, Northern Parkway, W. Overlea Avenue, Chesley Avenue, and Walnut Avenue) bisect Northeast-Southwest extending streets (Brook Avenue, Rosemont Avenue, Cedona Avenue, Ashley Avenue, and Spruce Street). Located north of this area is Overlea Manor, which contains three northwest-southeast streets (W. Elm, Manor, and Fuller Avenues) and one cross street, Highview Avenue, which ends at Taylor Avenue. The portion of the Overlea Survey District southeast of Belair Road includes all of the subdivisions known as the "Addition to Overlea," "Overlea Park," and "Cherry Heights." This portion of the district located between Kenwood Avenue and Fullerton Avenue contains two long northeast-southwest extending streets (Linden and Beech Avenues), which are intersected by southeast-northwest-running streets, which include Maple Avenue, E. Overlea Avenue, Willow Avenue, Madeline Avenue, E. Elm Avenue, Apple Street, Cherry Avenue, Hazel Avenue, and First Avenue. Residential construction is consistent throughout the residential portions of the district on both sides of Belair Road. Early twentieth-century construction (1905-1940) includes examples of Queen Anne, Foursquare, bungalows, Tudor Revival, Colonial Revival, and vernacular gabled-roof dwellings. Later mid-century residential development after World War II includes examples of two-story, side-gabled dwellings, a few of which contain Tudor and Colonial Revival influences; one-and-a-half-story gable-front-and-wing cottages; Colonial Revival, and Cape Cod houses. Four churches are also located within the district. The largest of these churches is St. Michael the Archangel Roman Catholic Church (BA-2627), a 1914 Romanesque Revival church with a 1950 rectory and school, located at the intersection of Willow Avenue and Belair Road. St. James Evangelical Lutheran Church (BA-2641) is a Gothic style church constructed in 1906 and located at the intersection of W. Overlea Avenue and Belair Road. The Overlea United Methodist Church, a Georgian Revival church constructed in 1950 is at the intersection of Overlea and Cedona Avenues, and the Emanuel Baptist Church, constructed in 1930 and reconstructed in 1994, is located along Linden Avenue.

### *Overlea (Platted 1901)*

When originally platted in 1901, the subdivision of Overlea contained six major northwest-southeast extending streets, five of which were named after trees species. Walnut, Chestnut, W. Overlea, Maple, Popular, and Locust Avenues were originally laid with right-of-ways for these roads set at 50 feet. These streets are bisected by five northeast-southwest-running cross streets with 30-foot right-of-ways, creating a grid pattern of blocks. These cross streets also named for trees were Oak, Hickory, Cedar, Ash, and Spruce Streets. The only changes to the original plan of the subdivision have been the renaming of Maple, Popular, and Locust Avenues, which today are the E. Northern Parkway, Fleetwood Avenue, and Pinewood Avenue. Both the E. Northern Parkway

---

and Fleetwood Avenue have been expanded to four lanes. All of the other streets remain two-lane roads. An un-subdivided square in the center of the subdivision between W. Overlea, Cedona, Chesley, and Rosemont Avenues originally contained the Everett Mansion, which was demolished to make room for the Overlea United Methodist Church, constructed in 1950 at the corner of W. Overlea and Cedonia Avenues. The remaining portions of the block not owned by the church were subdivided.

Two individually recorded buildings are located within the Overlea subdivision. The St. James Evangelical Lutheran Church (BA-2641), located at 7 W. Overlea Avenue, is a Gothic Revival church constructed of coursed ashlar-cut stone. Located northeast of the church is an associated church school, constructed in 1968. The Overlea Waiting Station (BA-2772) was built in 1917 as a streetcar station on the line between Overlea in downtown Baltimore. The building, located at the intersection of W. Overlea Avenue and Belair Road is a rectangular, wood-frame, hipped-roof building with bracketed eaves and an inset porch.

Most of the buildings that comprise the subdivision are residential buildings located within a residential setting west of Belair Avenue. Development has primarily occurred along the northwest-southeast-running streets of Walnut Avenue, Chesley Avenue, Overlea Avenue, E. Northern Parkway, Fleetwood Avenue, and Pinewood Avenue. The cross streets are mostly devoid of development with the exception of a few lots fronting Brook Avenue. Houses were constructed on 50 x 145 foot lots. The dwellings are set back at various intervals between 15 to 35 feet or from 15 to 25 feet from the streets. The streets were not designed to be tree lined, although trees have been planted sporadically at a few locations within the front of the lots. Most vegetation is contained to areas in the rear of the lots, behind the houses. Many of the properties also contain frame sheds and garages, constructed during the same time as the houses, located in the back yards at the rear of many of the lots.

The architecture within the Overlea subdivision primarily contains an eclectic collection of early-and-mid-twentieth century property types, most built for working class families. The most prolific examples of early-twentieth century construction are Foursquare and Craftsman bungalow style dwellings. The Foursquare houses are all two-story, frame dwellings that feature hipped roofs with dormers and contain front porches. These buildings were largely constructed throughout the subdivision from 1910-1920. The bungalows, constructed between 1915 – 1930, are one-and-a-half story frame dwellings with full width porches and prominent dormers. The side-gabled bungalow represents the most common type, however examples of hipped, front-gabled, and gambrel roof bungalow are also located within the Overlea subdivision.

A few examples of late Queen Anne architecture can also be found in the subdivision. Less frequently constructed than the other more prolific early twentieth century houses, Queen Anne houses within the subdivision are all two-story frame dwellings with irregular massing elements that include turrets, canted bays, and bay windows. All of the Queen Anne dwellings have porches. Some have porches limited to one elevation, while others have wrap-around porches. The dwelling at 7701 Walnut Avenue represents a common example

# Maryland Historical Trust

## Maryland Inventory of Historic Properties Form

Inventory No. BA-3297

Name Overlea Survey District  
**Continuation Sheet**

Number 7 Page 2

---

of Queen Anne architecture within the district. This dwelling features a turret with a conical roof and a hipped-roof porch.

The early-twentieth-century dwellings characteristically have been extensively altered with the application of modern materials. The earlier period dwellings have been clad with vinyl and asbestos siding, and many have had their original fixed sash, double-hung windows replaced with modern vinyl one-over-one double-hung windows. Additional alterations to some of these buildings have involved the full or partial enclosure of front porches and additions constructed onto the rear or side elevations.

Mid-twentieth-century dwellings occur less frequently within the subdivision than the early twentieth century property types. These dwellings, constructed between 1940 and 1955, are sporadically located along lots intermixed with earlier dwellings. Common examples of mid-twentieth-century construction within the subdivision include examples of gable-front-and-wing minimal traditional and front-gabled cottages. These dwellings are mostly simple frame houses that have now been clad in vinyl siding or brick veneer. Many feature porches of some kind. Less common mid-twentieth-century construction in the subdivision includes examples of two-story, Colonial Revival houses and other vernacular construction. Like earlier houses, these dwellings have been clad with vinyl or aluminum siding and have had their original wood windows replaced with double-hung vinyl windows. The most prominent mid-twentieth-century building is the Overlea United Methodist Church, located at 3902 Overlea Avenue. This Georgian Revival church was constructed 1950 on the block that originally contained the Everett family mansion.

Late-twentieth-century construction and even a few examples of twenty-first-century dwellings are sporadically located along a few of the residential lots that were redeveloped over time. These buildings having been constructed after 1960 and outside of the period of significance for the district are all non-contributing resources that represent neo-traditional and vernacular contemporary domestic construction. Some of the buildings are duplexes.

The portion of the subdivision along the Belair Road corridor is different from the residential portions of the subdivision in that it is more commercial in character. The portions of subdivision along the northwest side of Belair Road are dominated with post-1950 commercial buildings, many of which were built after the period of significance. These buildings are located along with a few earlier domestic properties that have been converted to commercial use. The commercial buildings are all generally undistinctive, vernacular, one-story rectangular brick or concrete block buildings capped by flat roofs. The residential buildings converted to commercial use have been renovated with enclosed porches and storefront additions. A small area of single-family homes still front the northwest side of Belair Road between W. Elm and Taylor Avenues. These dwellings are all early-twentieth-century domestic property types similar to the period dwellings in the residential enclaves of the subdivision and include examples of bungalows, Foursquares, and vernacular side-gabled dwellings constructed between 1910 and 1940.

Inventory No. BA-3297

Name Overlea Survey District  
**Continuation Sheet**

Number 7 Page 3

---

### *Overlea Manor (1916)*

Overlea Manor contains the portion of the Overlea Survey District north of the Overlea subdivision. Henry Kolb subdivided this area from the lands of Alexander Fuller. Platted in 1916, this area included all of the land between Walnut Avenue and Taylor Avenue. Three linear streets were created extending one-quarter mile from Belair Ave to their dead end terminus. These streets became Manor Avenue, West Elm Avenue, and Fuller Avenue. One cross street was laid out in the subdivision that intersects all three of these streets. Highview Avenue extends a distance of .20 miles southwest from Taylor Avenue to its dead end terminus just beyond Manor Avenue.

Most of the buildings that comprise the subdivision are residential buildings located within a residential setting west of Belair Avenue. Houses were constructed on rectangular lots set back 25 to 35 feet from the road. The streets were not designed to be tree lined, although trees have been planted sporadically at a few locations within the front of the lots. Most vegetation is contained to area in the rear of the lots, behind the houses. A few properties contain wood-frame garages and sheds. A rear ally extends behind the lots between Manor and W. Elm Street, providing access to the frame garage for the properties. A few other garages are located at the end of driveways.

The architecture within Overlea Manor represents property types constructed from the early-to-late-twentieth centuries. The most common early-twentieth-century domestic construction in Overlea Manor are bungalow houses. The side-gabled bungalow is the most popular form found in the subdivision, but other less common examples include front-gabled and gambrel roof examples. The dwelling at 22 W. Elm Avenue represents a common side-gabled bungalow found within the subdivision. This one-and-a-half-story, frame house contains a shed-roof porch and a dominant front-gabled dormer on the principal elevation. Like many neighborhood dwellings, 22 W. Elm has been clad in vinyl siding and its original fixed-sash, double-hung, wood windows have been replaced with vinyl, double-hung windows. Other examples of early-twentieth-century domestic construction found in Overlea Manor include Colonial Revival houses built circa 1930. Many examples of Colonial Revival architecture are located along Taylor Avenue.

Overlea Manor contains more prolific mid-twentieth-century construction than the original Overlea subdivision. More than half of the dwellings constructed within the subdivision are post World War II houses constructed between 1945 and 1955. The majority of Manor Avenue is lined with dwellings constructed in the years after World War II. Common forms of mid-twentieth-century architecture include minimal traditional gable-front-and-wing cottages, vernacular front-gabled cottages, and two-story frame and brick vernacular dwellings. Many of these two-story dwellings contain Tudor and Colonial Revival influences. The house at 17 Manor Avenue is a typical example of a two-story vernacular house constructed circa 1945 that features a Tudor Revival entry bay. The first story of these houses is characteristically clad with a brick veneer and the second story originally had wood siding. All of the examples now are clad with vinyl siding. Only four examples of

Inventory No. BA-3297

Name Overlea Survey District  
**Continuation Sheet**

Number 7 Page 4

---

late-twentieth-century domestic construction are located along Fuller Avenue. The properties at 112, 4, and 3 Fuller Avenue contain modular houses constructed during the 1980s and 1990s.

The portion of Overlea Manor along Belair Road corridor has seen changes resulting from the commercialization of this area, which has been ongoing since the 1950s. A few of the properties, such as 7100 and 7010 Belair Road, have been redeveloped with commercial properties constructed after 1950. However, much of the corridor also still contains examples of bungalows, Colonial Revival, and vernacular side and front-gabled dwellings constructed between 1925 and 1940.

As with the original Overlea subdivision, the early and mid-twentieth-century dwellings characteristically have been extensively altered with the application of modern materials. The earlier period dwellings have been clad with vinyl and asbestos siding, and many have had their original fixed sash, double-hung windows replaced with modern vinyl one-over-one, double-hung windows. Additional alterations to some of these buildings have involved the full or partial enclosure of front porches and additions constructed onto the rear or side elevations.

### *Addition to Overlea (1905) and Overlea Park (1912)*

Henry Kolb platted both the Addition to Overlea and Overlea Park subdivisions from land located on the east side of Belair Road between what is today Kenwood Avenue and E. Elm Avenue. The subdivision was laid out to include two primary, northeast-southwest-running streets named Linden and Beech Avenue, each with 50-foot right-of-ways. Cross streets within the Addition to Overlea included E. Elm, Willow, E. Overlea, and Maple Avenues, which contained 30-foot right of ways. The streets were not designed to be tree lined and currently have minimal vegetation. However, many of the rear of the lots do contain landscaping. Individual lots laid out along the streets were mostly rectangular, measuring 40 by 145 feet or 50 by 150 feet. Located between E. Overlea and E. Elm Avenues, Overlea Park contained even smaller lots that measured 25 by 145 feet which were located along two cross streets, Madeline and Willow Avenues, laid out between Belair Road and Linden Avenue. Dwellings along these streets are set back 20 to 30 feet from the roadway. A few of the properties contain sheds and garages located in back yards behind the houses or at the end of driveways.

St. Michael the Archangel Roman Catholic Church (BA-2627) is the only resource within the Overlea Park subdivision to have been individually recorded. Construction began on the church in 1914 and was completed a few years later. The stone Romanesque Revival church which features twin bell towers stands on the corner of Belair Road and Willow Avenue. The church also contains a rectory and school constructed in 1950.

The majority of the neighborhood around St. Michael the Archangel Roman Catholic Church still remains residential in character with collections of popular styles of domestic construction ranging from the early-to-late-twentieth-century and even some early-twenty-first-century construction. The most common examples of early-twentieth-century construction represent examples of popular forms of bungalows and Foursquare houses

# Maryland Historical Trust

Inventory No. BA-3297

Name Overlea Survey District  
**Continuation Sheet**

Number 7 Page 5

---

largely constructed for working class families. As in the other parts of the Overlea Survey District, a variety of types of bungalow dwellings were constructed in the Addition to Overlea subdivision. The most popular form was the side-gabled bungalow, which characteristically contained a full width front porch and a dormer located on the roof of the front elevation. The dwelling at 101 E. Elm Avenue represents a common side-gabled bungalow found within the subdivision. This one-and-a-half-story, frame house contains a shed-roof porch with rock-faced block piers and a dominant front-gabled dormer on the principal elevation. Like many neighborhood dwellings, 101 E. Elm has been clad in vinyl siding and its original fixed-sash, double-hung, wood windows have been replaced with vinyl, double-hung windows. Other examples of bungalow dwellings in the subdivision included front-gabled, hipped-roof, and gambrel roof dwellings. Many more examples of Foursquares and bungalow dwellings constructed of rock-faced concrete block are found in the Addition to Overlea subdivision than other parts of the district. Other early construction in the subdivision includes examples of late-Victorian-period architecture (Queen Anne and Folk) and vernacular front and side-gabled frame houses all constructed between 1905 and 1915.

As with the case in other parts of the district, the early twentieth century dwellings characteristically have been extensively altered with the application of modern materials. The frame houses have all been clad in synthetic sidings (vinyl and aluminum) or have been clad with asbestos shingle tiles. In addition, most of the dwellings have had their original fixed-sash, double-hung windows replaced with modern vinyl one-over-one, double-hung windows. Additional alterations to some of these buildings have involved the full or partial enclosure of front porches and additions constructed onto the rear or side elevations.

Other examples of architecture in the subdivision include a few later examples of Colonial Revival dwellings constructed between 1930 and 1955 and examples of Cape Cod and Tudor Revival cottages, which were popular during the 1930s and 1940s. Many lots have been redeveloped with late twentieth century and early twenty-first century non-contributing resources representing neo-traditional and simple modular property types. These dwellings are intermixed with the early-twentieth-century domestic construction at various locations within the subdivision.

The architecture along Belair Road markedly differs from the other parts of the subdivision east of Belair Road in that it contains a mix of residential and commercial architecture, keeping with the character of the commercial corridor along Belair Road. Although examples of early-twentieth-century Foursquare and vernacular front-gabled dwellings still line Belair Avenue, most of these buildings have been converted to commercial use. This has resulted in the removal or enclosing of porches and construction of commercial storefronts. These buildings, intermixed with post-1950 commercial development, have replaced other earlier domestic construction that has been demolished as a result of Belair Road becoming more commercial in character during the latter half of the twentieth century. These commercial buildings represent examples of early strip mall development constructed as commercial blocks during the 1960s and other simple one-story

concrete block commercial buildings with commercial storefronts containing display windows, awnings, and brick veneer facades.

### *Cherry Heights (1910)*

Cherry Heights (BA-3055), or the Overlea African American District, was previously documented during an architectural survey in 2002. Boundaries of the survey district contain all of the land that was platted in 1910. Located north of the Addition to Overlea, Cherry Heights was intended as a planned African-American neighborhood. Surveyed in 1908 and platted in 1910, the subdivision was located adjacent to the east side of Belair Road between Fullerton Avenue and the northern boundary of the Addition to Overlea. The Cherry Heights subdivision contained a total of 136 lots. The standard lot size was 40 by 135 or 40 by 155 feet, but some larger lots were located along Belair Road that measured 49 by 160 and 58 by 160 feet. Linden and Beech Avenues were the two principal streets within the subdivision extending from the Addition to Overlea to the terminus of these streets at Fullerton Avenue. Both streets contained 50 foot right-of-ways. Cross streets planned within Cherry Heights included Apple, Cherry, Hazel, First, Second, and Third Streets, each with 30 foot right-of-ways.

Nearly all but a handful of lots were laid out to ensure that development primarily occurred along Linden and Beech Avenues. Only a few lots faced the cross streets. Houses are set back 15 to 25 feet on lots facing Linden Avenue and between 25 and 45 feet on lots facing Beech Avenue. As with other parts of the district, the streets were not designed to be tree lined and are largely devoid of vegetation. What vegetation has occurred within Cherry Heights has been limited to the back of the lots, behind the houses.

Cherry Heights still retains examples of early-twentieth-century-domestic construction. Linden Avenue contains frame, Queen Anne and vernacular late-Victorian-period dwellings built shortly after the subdivision was created in 1910. Examples of bungalow construction appear on both Linden and Beech Avenue. Foursquare dwellings are less prominent in Cherry Heights as compared to many of its surrounding neighborhoods, with the only examples in Cherry Heights located at 7418 Beech Avenue; 7201, 7203, and 7403 Belair Road; and 4207, 4209 Fullerton Avenue. A few examples of Colonial Revival dwellings are also within the district.

The Emmanuel Baptist Church, located at 7404 Linden Avenue, is the only church located in Cherry Heights. This one-story, vernacular, frame, front-gabled church was originally constructed in 1930, but was renovated in 1994. The church currently contains a stucco clad masonry exterior and its original windows have been replaced with double-hung, vinyl replacement windows.

Areas of the subdivision along Belair Road and Fullerton Avenue also contain early and mid-twentieth-century dwellings. The Belair Road portion of Cherry Heights is much more residential in character than compared to

Number 7 Page 7

other parts of this commercial corridor, which has seen much commercial redevelopment. This portion of Belair Road is lined with examples of Foursquare, Colonial Revival, bungalows, Queen Anne, and vernacular front-gabled and side-gabled dwellings constructed from 1910 to 1935. Fullerton Avenue also contains examples of Foursquare, bungalows, and vernacular front and side-gabled dwellings constructed from 1910 to 1930. Later examples of domestic architecture include Cape Cods constructed circa 1950.

The residential areas of Cherry Heights contain more contemporary infill development than many of its neighboring subdivisions. Three houses along Linden Avenue are intermixed with early-twentieth-century dwellings. Ten contemporary houses along Beech Avenue were constructed in the 1990s or 2000s and four houses were built during earlier construction campaigns in the 1950s, 1960, and 1970s. Apple Street contains an example of ranch construction built circa 1965.

Most of the dwellings that do remain from the early twentieth century have undergone many of the same renovations as other neighborhoods in the Overlea Survey District. Common alterations have included the sheathing of frame buildings in synthetic sidings (vinyl and aluminum) or asbestos shingle tiles, and the replacement of original fixed sash, double-hung, wood windows with vinyl, double-hung windows. Some of the dwellings have also had reconstructed porches, full or partial enclosure of front porches, and additions.

**Construction dates** 1905-2010

Evaluation for:  National Register  Maryland Register  not evaluated

Prepare a one-paragraph summary statement of significance addressing applicable criteria, followed by a narrative discussion of the history of the resource and its context. (For compliance projects, complete evaluation on a DOE Form – see manual.)

The Overlea Survey District is comprised of five subdivisions located along both sides of Belair Road (US 1) within portions of Baltimore City and Baltimore County, which form the core areas of the community of Overlea. The period of significance for the district encompasses the years all of these five subdivisions, Overlea, Overlea Manor, the Addition to Overlea, Overlea Park, and Cherry Heights were initially settled between 1901 and 1955. Overlea developed as a street car suburb during the early twentieth century and development progressed into the mid-twentieth century. Today, most of the district contains residential neighborhoods that still retain collections of common forms of working class housing from the early twentieth century (bungalows and Foursquare dwellings) mixed with less prolific examples of Late Victorian period architecture (Queen Anne and vernacular two-story, side and front-gabled houses) constructed between 1905 and 1915. Significant concentrations of later period revivals (Colonial and Tudor) along with gable-front-and-wing minimal traditional and simple vernacular front-gabled houses constructed between 1930 and 1955 also populate the district. Some of the parcels within the residential portion of the district have been redeveloped with contemporary infill development representing later periods of twentieth and twenty-first century construction. In marked contrast, the Belair Road Corridor has been heavily redeveloped during the last half of the twentieth century with commercial development intermixed with older residential construction that has been renovated for commercial use.

Much of the land that now comprise the core area of what is now the community of Overlea was originally part of a tract of land known as “Sophie’s Garden Regulated” and 43 adjoining acres that were purchased by Margaret Fuller in 1858. Fuller, a widower with six children, relocated from Ohio to settle on this property.<sup>1</sup> The setting remained characteristically rural during the late nineteenth century consisting of numerous small farmsteads occupying elevated areas of the rolling topography. By 1885, the first post office and general store was established near Overlea. A year later, the Fullerton School opened its doors for the first time. In 1890, a frame school house replaced the one-room log building that originally housed the school.

The expansion of the city’s street car system along Belair Road in 1904 provided the means for suburban growth, and developers began purchasing and subdividing large farm tracts along Belair Road between 1901

and 1912. The proximity of the Belair Road street carline made areas adjacent to Belair Road attractive to land speculation. As early as 1895, the Kennard Land Company purchased the Lange Farm and subdivided this property into various lots. Although originally known as “Lange’s Farm”, the subdivision was soon renamed “Overlea”, which means “over the meadows”.<sup>2</sup> In July of 1901, The Overlea Land Company filed a plat of the new community with Baltimore County. The new subdivision consisted of a grid pattern of blocks formed by north-south and east-west intersecting streets. All east-west streets were 50 feet wide, while north-south streets were 30 feet wide. Each block was intersected by an east-west running ally that was 10 feet wide. The streets were named after common trees: Spruce, Ash, Cedar, Chestnut, Hickory, Walnut, Willow, Poplar, and Elm, with the exception of Overlea Avenue. Typical lot size measured 50 x 145 feet. One block in the center of the plat was laid out for the Everett family mansion, intersecting West Overlea Avenue between Hickory and Cedar Streets. The mansion, built during the nineteenth century, is noted on the plat map as already existing at this location. The mansion was demolished prior to the construction of the Overlea United Methodist Church in 1950, which currently occupies this site. Another dwelling that pre-existed the subdivision occupied two lots in the adjacent block west of the Everett family mansion along West Overlea Avenue.<sup>3</sup>

Real Estate interests helped persuade United Railways to expand the Belair Road carline to Overlea, resulting in a real estate boom for the area. In 1904, The United Railway streetcar line expanded to Overlea from Baltimore City with a single set of tracks providing rail services that terminated at Kenwood Avenue.<sup>4</sup> With the commuter line intact, individual parcels within Overlea were rapidly sold and were developed upon. It was at this time the Four Mile House, or Coach House, was constructed along the 6600 block of Belair Road. In operation as a tavern since 1902, this building was moved 60 feet to the north in 1941 to make room for the construction of a gas station at its original location.

New subdivisions were soon platted as demand for property escalated. Henry Kolb, one of the most prodigious suburban developers in northeast Baltimore during the early twentieth century, oversaw the development of much of the land on the east side of Belair Road. A native of east Baltimore, Kolb began his career at the firm of Smith and Schwartz. His first venture in real estate was investing in property along Maple Avenue, just off Belair Road, where he built his family home. Kolb was one of the first people to realize the real estate potential of suburban development along the Belair Road corridor. During the first decades of the twentieth century, Kolb began acquiring large parcels of land along Belair Avenue for speculative purposes. While the expansion of Baltimore’s streetcar system along Belair Avenue provided the transportation means to allow for suburban growth, city water mains did not stretch as far north, requiring Kolb to sink deep wells at his own expense to provide water for his subdivisions. Kolb built hundreds of houses in what became Overlea. He also provided

---

reasonable mortgages to buyers and was lenient with payments during the tough economic times with the Great Depression. Subdivisions created by Kolb included Overlea Manor, Linhigh, and Fullerton Heights.<sup>5</sup>

In 1905, Kolb platted the "Addition to Overlea" which subdivided the land on the east side of Belair Road, opposite the Overlea subdivision. This subdivision contained two long northeast-southwest running streets which were named Linden Avenue and Beech Avenue. These streets were intersected by three southeast-northwest running streets, E. Elm Avenue, E. Overlea, Avenue, and Maple Avenue. Lots within the subdivision measured 40 or 50 feet by 145 or 150 feet, depending upon location.<sup>6</sup> In 1912, Kolb platted another subdivision known as Overlea Park, which contained 14 acres located on the east side of Belair, between E. Elm and E. Overlea Avenues. Two of the more prominent streets in this subdivision were Willow and Madeline Avenues. Madeline Avenue was named after Kolb's daughter. Lots along Willow Avenue measured 25 x 150 feet, with the depth being greater among the lots that lined Madeline Avenue.<sup>7</sup>

In 1909, another developer, Daniel Murray, began efforts to subdivide land located north of the "Addition to Overlea" for African-American settlement. His efforts resulted in the creation of a new community plat known as Cherry Heights, which was subdivided and recorded in 1910. Located north of the Addition to Overlea, *Cherry Heights* was reportedly one of the first housing developments intended for African-American homeowners in Baltimore County.<sup>8</sup> Lots were located between Linden and Beech Avenues within Elm and Fullerton Avenues. What made Cherry Heights unique from other subdivisions developed for African-American settlement was that this settlement was created by an African-American for African-Americans.<sup>9</sup> Murray was a native of Baltimore who served as an assistant librarian with the Library of Congress. He was a recognized leader in the African-American community, who served as the first African-American member of the Washington Board of Trade and also testified about African-American concerns before the House of Representatives about Jim Crow laws. Murray also twice served as a delegate to the Republican National Convention and frequently contributed to many African-American publications, most notably *The Voice of the Negro*. Following his death in 1925, the Library of Congress acquired Murray's personal library of African-American works.<sup>10</sup> Despite his involvement creating Cherry Heights, census records indicate that Murray never resided in the community.

Rapid development occurred within Overlea during the first two decades of the twentieth century. By 1918 the City of Baltimore annexed a large portion of Overlea from Baltimore County. At this time, approximately 200 homes had been constructed in the original Overlea subdivision, further fueling the

---

development of additional subdivisions.<sup>11</sup> Cherry Heights developed at a slower, but steady pace. In 1915, only six dwellings had been constructed. However by 1920, Census data indicates 14 separate households living on Linden Avenue. All of these residents were African-American families. The heads of households of these families were largely employed within service related industries or were unskilled workers. Occupations listed in the 1920 federal census included cooks, laundress, drivers, porters, common day laborers.<sup>12</sup> The 1920 federal census identifies the streets in the same general location as Linden Avenue as being settled by people of white ethnicity. Beech Avenue, Madeline Avenue, Kolb Avenue, East Elm Street, East Overlea, Maple, Willow, Willowdale, and Kenwood Avenues all contained families of European descent, as did the streets located in the original Overlea subdivision that included Maple, Walnut, East Overlea, Chestnut and Popular Streets. Many of these families held German ethnicity, having either immigrated from Germany or were first generation German-Americans. The heads of these families tended to be a mixture of both skilled and unskilled laborers. Common occupations included machinists, factory foreman, tailors, storekeepers, clerks, stenographers, plumbers, and day laborers. Many worked for either the railroads or the shipyards.<sup>13</sup>

The racial and social demographics of Overlea did not change during the next two decades. Both the 1930 and 1940 census identify Linden Avenue as containing a concentration of African-American families whose heads of households were employed as unskilled laborers or in service related positions such as chauffeurs, barbers, and maids; all of which were typical professions that employed African-Americans during the early twentieth century. Like in 1920, the streets surrounding Linden Avenue were populated with white families of European ancestry. The heads of these families remained employed in both skilled and unskilled working class professions. Common occupation included machinists, salesmen, carpenters, watchmen, janitors, carpenters, factory workers, clerks, plumbers, butchers, and shipyard workers.<sup>14</sup>

Suburbanization moved beyond Overlea during the decades after World War II. During the 1950s and early 1960s, many large scale highway projects were completed that expanded the regional roadway network. By 1952, the Chesapeake Bay Bridge was completed, and in 1954, the Baltimore-Washington Parkway was opened. Three years later in 1955, the Harbor Tunnel was completed, and by 1962, the Baltimore Beltway and the Jones Falls expressway opened. These projects, along with various other local road improvements allowed for the suburban development further into exurbia. Most of the neighborhoods in Overlea were already densely developed by the early 1950s. The primarily change to the community in the years after 1960, occurred primarily along the Belair Road corridor. Better highway systems also affected commercial development, allowing for the advent of strip malls and eventually larger shopping malls. Following World War II, the streetcar also discontinued service along Belair Road. In order to attract more business from auto-traffic,

businesses along Belair Road began to modify buildings during an urban renewal efforts aimed to help the area compete against new commercial strip malls. Many former residences along Belair Road were converted to commercial and retail space. To make them more noticeable to automobile travelers, retailers added new commercial storefront facades or enclosed open porches. Many also applied modern awnings and signage to building facades. In some instances entire blocks of residential housing were demolished for the construction of large commercial buildings.<sup>15</sup>

### Verbal boundary description and justification

The district's southern boundary extends along Pinewood Ave and Kenwood Ave. The west boundary extends along Brook Ave and a portion of Walnut Ave, and western boundaries of the last properties along three dead end streets, Manor Ave., W. Elm Ave., and Fuller Ave. The northern boundary extends along Taylor Ave and Fullerton Ave. The eastern boundary extends along the rear or southwest boundaries of the lots on the southwest side of Beech Ave. These boundaries encompasses all of the original subdivisions known as Overlea, Overlea Manor, Addition to Overlea, Overlea Park, and Cherry Heights, which formed the core area of the community of Overlea.
