

CAPSULE SUMMARY CT-1142

Norfolk barn A is the oldest barn on the Norfolk farm. The Norfolk farm is located on the east side of highway four, just slightly south of Dunkirk town center. The farm is relatively large, and once served as both a tobacco and dairy farm. The Norfolk family purchased the property in 1913 and moved here from the Lower Marlboro area, where Mr. Norfolk's father had been a tenant farmer. The barn was on the property when it was purchased. Norfolk barn A is on the east side of the highway, and the closest to it of any of the barns on the property. The original farm house is set on top of a hill, a little bit to the north of barn A. This hill was the original site of the barn. The barn was moved from this site in 1917, when the Norfolk family decided to use the site to build their house. This forty by twenty-four foot barn has a cross-axial plan, hewn timbers and fully mature machine cut nails. There is a sixteen foot wide shed built on to its south facade. It is typical of the ante-bellum period of barn construction in Southern Maryland. An enclosed stripping room area was built in to the southwest corner of the shed ca. 1932.

7. DESCRIPTION CT-1142

Norfolk barn A is the oldest barn on the Norfolk farm. The Norfolk farm is located on the east side of highway four, just slightly south of Dunkirk town center. The farm is relatively large, and once served as both a tobacco and dairy farm. The Norfolk family purchased the property in 1913 and moved here from Lower Marlboro area, where Mr. Norfolk's father had been a tenant farmer. The barn was on the property when it was purchased. Norfolk barn A is on the east side of the highway, and the closest to it of any of the barns on the property. The farm road runs past the north facade of the barn. There are two other tobacco barns on the farm, one on the opposite side of highway four, to the west, and the other slightly to the east of barn A. There is also a dairy barn on the farm that is located to the north, near the new farm house. The original farm house is set on top of a hill, a little bit to the north of barn A. This hill was the original site of the barn. The barn was moved from this site in 1917, when the Norfolk family decided to use the site to build their house. This forty by twenty-four foot barn has a cross-axial plan, hewn timbers and fully mature machine cut nails. There is a sixteen foot wide shed built on to its south facade. It is typical of the ante-bellum period of barn construction in Southern Maryland.

The forty foot length of the barn is divided into five eight foot wide bays. The central bay serves as a central aisle, and the sills have been cut out from this aisle in order to accommodate vehicle passage. There are cross-sills on either side of this central aisle. There are two four foot wide doors centered on each of the gable ends, and a large double twelve foot wide door centered on the south facade of the shed. There are pintel holes remaining in the doorposts along the south facade of the barn, from where a door once stood prior to the building of the shed addition.

Concrete and wooden blocks, in addition to some large unmortared fieldstones, support the frame. The timbers are large hewn and pit sawn timbers attached with fully mature machine cut nails. The posts are joined by mortise and tenon joints and held with trunnels. One of the cross-sills is a circular sawn replacement. Vertical siding covers the barn. There is one hinged ventilation door on each eight foot bay. These hinged ventilation doors were added when the barn was moved. The south facade wall of the barn was once sided. This is indicated by the remaining fully mature machine cut nails in the nailers. Shingle nailers are visible underneath the standing seam metal roof. The roof rafters are on four foot centers and rest on a flat false plate. There are four windbraces (one on each diagonal) on the roof. These windbraces extend into the shed. Three collars and king posts also help to support the roof. The poles down the central axis are peeled logs with holes drilled out and pegs inserted. The peeled log tier poles then rest on these pegs. The tier poles are separated by forty-three inches vertical distance, and there are four levels of them before the tie beam. Other tobacco remains in the barn

7. Description CT-1142 (continued).

include tobacco sticks, iron wagon wheels, and "salamander" heaters, similar to those used in Florida to heat the orange groves.

7. DESCRIPTION CT-1142

The sixteen foot wide shed is supported on earth-fast principal posts. There is a large twelve foot wide double doorway centered along its south facade. The top plate is hewn, the tie beams and rafters are re-used timbers. The nailing rails are all circular sawn. Plain vertical wall siding with hinged ventilation doors covers the exterior walls of the shed. There is one ventilation door each eight feet. Wooden shingle nailers are visible underneath the standing seam metal roof. The shed was built after 1890 -- all nails are wire, but before the move in 1913. There is a stripping room area that was built into the southwest corner of the shed ca. 1932. All that remains of this stripping room is some evidence of siding along its east wall, two windows on the west side and boarded up windows on the south side. According to Mr. Norfolk, this was the first inside stripping area built in the third election district.

8. SIGNIFICANCE CT-1142

This barn is significant as an example of the typical ante-bellum barn in Southern Maryland. Its forty by twenty-four foot measurements and cross-axial plan are the most frequent arrangement for barns of this period. The location of a shed on the south side is also frequently seen. The barn is also significant because of the oral history provided in conjunction with it. Mr. Norfolk states that the barn was here when the family moved here in 1913 and was moved to its current site in 1917. Apparently, when the barn was moved, the original mortises and materials (including nails) were re-used. The stripping room in the southwest corner is important because, according to Mr. Norfolk, it was the first internal stripping room built in the third election district.

This barn also yields information regarding agricultural history in Southern Maryland. In February 1990, a tobacco barn survey was initiated in order to study the tobacco barns of Calvert County. Until fairly recently, tobacco was the most important farm crop of the county. More acreage was devoted to its cultivation than for both of the next most extensive farm products (corn and wheat). The barns and stripping houses related to this "Tobacco Culture" are widely recognized as the most common element on the rural landscape. These structures are also the most threatened, as the market for tobacco declines. They seem to have, at present, only limited capabilities for re-use. Many barns and stripping houses now stand empty. The purpose of this survey has been to gather information and document a wide sample of these structures before they disappear from the landscape.

Historical Period theme(s): ca. 1830-; Tobacco; Agriculture
Geographical Organization: Western Shore Chesapeake Bay Calvert Cty MD
Chronological/Developmental Period: ca. 1830-Present
Resource Type(s): Tobacco Barn

This farm is up for sale, and is zoned industrial, so it is likely that a large portion of it will soon be developed. The dairy on the farm was the last operating milk run in Calvert County. The farm is now used solely as a residence and for growing small private crops. There has been no tobacco grown on the farm for four years. Norfolk barn A was standing when the Norfolk family moved here in 1913. The Norfolks moved the barn in 1917 in order to build a house on the same site as that previously occupied by the barn. Mr. Norfolk and his father moved the barn. At the time it was moved, the shed was extant. According to Mr. Norfolk, tobacco was loaded into ox-carts and unloaded at all four doors. This was done until the 1920s, when vehicles began to go into the barns. Parts of the sills and some of the internal posts were replaced when the barn was moved. Later alterations include the removal of the sill from across the central doorway, the replacement of the shingle roof with metal, and the building of an internal stripping room area ca. 1932.

Field Notes

#2115 - Norfolk barn A in Dunkirk MD. Farm i son east side of highway four just past Stevenson Pools. Private Ownership, unoccupied. TW recorder. Sunny and pleasant weather. No tobacco grown for four years. Barn built when family moved here in 1913. Moved barn in 1917 in order to build house on same site as previously occupied by barn. Mr. Norfolk and his father moved the barn. At the time it was moved, the shed was extant. According to Mr. Norfolk, tobacco was loaded into ox-carts and unloaded at all four doors until the 1920s, when vehicles began to go into the barns. Parts of the sills and some of the internal posts were replaced when the barn was moved.

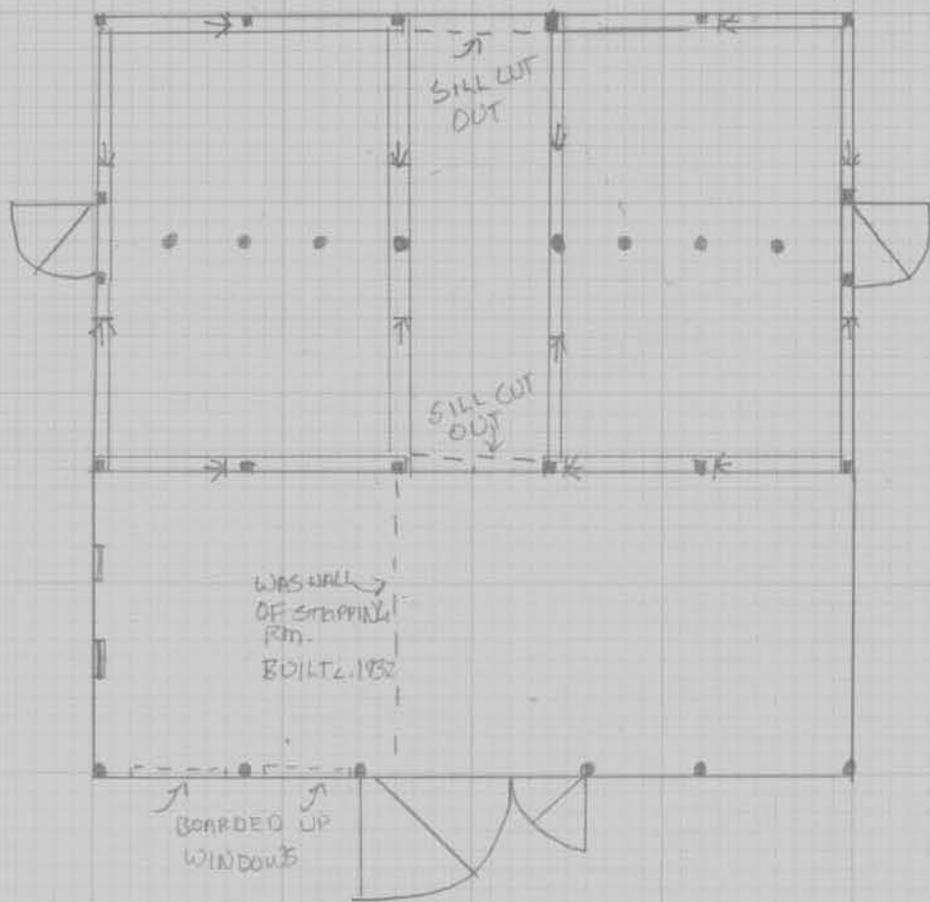

Concrete and wooden blocks support the frame, in addition to some large unmortared fieldstones. The timbers are large hewn and pit sawn timbers attached with fully mature machine cut nails. The posts are joined by mortise and tenon joints and held with trunnels. One of the cross-sills is a circular sawn replacement. Vertical siding covers the barn. Hinged ventilation doors were added when it was moved. There is one hinged ventilation door on each eight foot bay. Shingle nailers are visible underneath the standing seam metal roof. The roof rafters are on four foot centers and rest on a flat false plate. There are four windbraces (one on each diagonal) on the roof. These windbraces extend into the shed. Three collars and king posts also help to support the roof. Peeled log tier poles rest on pegs set into the central axis poles. The tier poles are separated by forty-three inches vertical distance, and there are four levels of them before the tie beam. The poles down the central axis are peeled logs with holes drilled out and pegs inserted. Other tobacco remains in the barn include tobacco sticks, iron wagon wheels, and "salamander" heaters. Door from south side barn removed. Stripping room area built into barn ca. 1932, according to Mr. Norfolk, was first stripping area in third election district.

The shed is formed of earth-fast principal posts. The top plate is hewn, the tie beams and rafters are re-used timbers -- previously studs. The nailing rails are all circular sawn. Plain vertical wall siding with hinged ventilation doors covers the exterior. There is one ventilation door each eight feet. Wooden shingle nailers are visible underneath the standing seam metal roof. The shed was built after 1890 -- all nails are wire, but before move in 1913.
