Description of Property and Justification: *(Please attach map and photo)*

CT-59, known variously as Preston's Cliffs, Charles's Gift, and the Wilson Farm, is situated north of the existing power plant and within the viewshed of the proposed project. The property presently consists of three large tobacco barns, some of which date from the first half of the nineteenth century, a modern frame building, and the ruins of a seventeenth-century house. (Previous investigations have determined that the barns illustrate the development of tobacco house architecture in Maryland.) In the vicinity of the ruins, the Calvert Cliffs Nuclear Power Plant buildings occupy the setting. The nuclear power plant's parking lot and security gate stand near CT-59. One barn and the modern frame building serve as the Visitor's Center; a second barn has been used for public display purposes.

Throughout history, CT-59 has changed ownership many times, thus contributing to its many different names. In 1658, Cecilius Calvert, second Lord Baltimore, granted the land to Richard Preston. It then became known as Preston's Cliffs, but development of the estate languished. The name changed when Charles Calvert, third Lord Baltimore, turned the land over to Captain Richard Ladd in 1676. It was renamed Charles's Gift. In his will, Capt. Ladd bequeathed his land and house to nearby Christ Church Parish in 1691. At this point, the property became glebe land. The property's third name, Wilson Farm, dates from after this time, the period following disestablishment of the Anglican Church after the American Revolution.

According to the CT-59 site form, the house, which was first mentioned in Capt. Ladd's will, underwent multiple phases of

200701093

attic chamber. A single chimney stood at one end (which was later removed). In circa 1720, the house was enlarged with a one room addition to the west façade. Two chimneys were then built at the south end. At a date of circa 1830, the house was extended by a center hall and two rooms to the north end, also with two exterior chimneys.

In its final state, the house stood on a continuous brick foundation, and, due to the multiple additions, featured an asymmetrical façade. It was five-bays wide with a central door that was topped with a transom light. The fenestration consisted of nine-over-six, double-hung, wood sash windows. In 1972, this building was in an advanced state of deterioration. After it was structurally examined and fully recorded, the building was razed. Two pairs of shouldered, brick chimney stacks with corbelled caps and brick outlines of the foundation comprise the ruins, which has been preserved for public interpretation. A wood rail fence surrounds the ruins. Text panels have been installed near the fence. The tobacco barns (CT-59A and CT-59B) are now facilities for the visitor's center and stand southwest of the ruins. The barns had been opened to the public for on-site interpretation, but they have been closed to the public due to increased security measures at the nuclear power plant. CT-59 C (Photograph 14) is used for storage. According to the CT-59A site form on file at MHT, CT-59A is mapped in the wrong location. Nevertheless, CT-59A is the first barn built at the site in 1820 from material salvaged from older, moveable tobacco houses. It is a single pen log barn measuring sixty-feet long and thirty-three-feet wide. The barn underwent multiple alterations and additions. The original building was constructed with chestnut poles locked at the corners with diamond notches. The thickest logs were laid on the bottom and appeared thinner at the top. The sill logs were supported above the ground by large rocks. The shed on the south side was original. It was framed around hole-set cedar wall posts mortised, tenoned, and pinned to the wall plate. Both the shed and gables were closed in with vertical planks. During the economic downturn following the Civil War, the barn was neglected and its roof failed. Late in the century, before it could be put back into use, the barn and its shed had to be completely re roofed. During reconstruction, many of the old members were reused, so that original and replacement timbers alternated in the roof frame. Then, in the mid-twentieth century, the barn was enlarged with a six room, box-framed extension. The extension probably dates after 1936. Presently, CT-59A stands as a heavy timber framed building with a shed roof extension. It stands on a concrete block pier. Two-and-one-half sides of the barn are clad in vertical wood planks, while the remainder is constructed with unhewn logs that feature dovetailed corner notching. An uninterrupted sill is present on the log core. It has a metal cover on its gable roof.

CT-59B, underwent three phases of construction. The first phase was constructed in 1818 and consisted of a forty-by-twenty-foot barn. The body and roof of the barn were tier-railed and poled at four-foot intervals for hanging tobacco. The only original doors were two pedestrian doors, one on each side of the barn at the north side of the cross sill. The barn originally was covered with shingles and enclosed with plank. The second phase, conducted later in the nineteenth century, consisted of the addition of a shed to the west side and gable ends of the barn. The final phase of construction included the extension of both ends and the west side of the barn with sheds. The sheds were constructed with hole-set cedar posts and pine pole rafters and shingle lath. These additions are shown in a 1936 Historic American Buildings Survey (HABS) photograph. Subsequently, the south shed was removed, and the barn was extended another thirty-six-feet. As noted earlier, CT-59B has been converted into visitor's centers for the Calvert Cliffs Nuclear Power Plant. Adjacent to CT-59B stands a modern frame building constructed circa 1985. Both buildings have been completely modernized and feature concrete floors, modern plumbing, electricity, and insulation.

One newly surveyed tobacco barn stands near CT-59A and CT-59B and contributes to the significance of CT-59. Similar in construction to CT-59B and across the roadway from CT-59A stands CT-59C (the newly surveyed tobacco barn that contributes to CT-59). CT-59C is a heavy timber frame building that stands on a poured concrete pier foundation. It is clad in vertical wood siding and features wire nails. The gable roof is covered with metal sheets and is trimmed with exposed rafter tails.

Based on previous research investigations, it is likely that the barns associated with CT-59 have been built from material salvaged from older, moveable tobacco houses on the farm. Earlier investigators identified carpenter's numbers etched into some of the logs. The numbers are not assembly numbers; rather, the wall logs were numbered when old tobacco barns were dismantled to allow for easy reassembly elsewhere. Because the present arrangement of the logs bears little relationship to their numbers, it can be assumed that some of the logs had been used and reused numerous times before being incorporated into the present structures. This illustrates the transition from cheap, impermanent tobacco barns to the well built, permanent structures that gradually replaced them beginning in the eighteenth-century.

Based on its association with local tobacco culture and agricultural history, CT-59 is NRHP eligible under Criterion A at the local level. Although the main residence has been demolished, a contemporary frame building has been constructed among them, and the former tobacco houses have been altered, the resource continues to convey its historic association with tobacco culture and the historic development of Calvert County through the barns and ruins. In its massing, workmanship, materials, and design, the contemporary frame building is constructed in a style sympathetic to the frame vernacular style of the extant buildings and does not diminish the integrity of CT-59's setting. CT-59 is also eligible for listing in the NRHP under Criterion C. The barns are unique examples of tobacco house architecture reflecting their evolution from impermanent tobacco barns to permanent, structurally sound buildings. No information was identified to associate former owners of the property with prominence or significant historic events. The resource is not NRHP eligible under Criterion B. Further directed historical research and archaeological investigations are warranted to determine the resource's NRHP eligibility under Criterion D. Based on reports of previous historical investigations and the likelihood of encountering undisturbed soils containing features, CT-59 has the potential for yielding historic archaeological information.

4. NOTABLE FEATURES, HISTORICAL SIGNIFICANCE AND DESCRIPTION		OPEN TO PUBLIC NO	
<p>Preston's Cliffs, a good example of a small Maryland plantation house of the 18th century, now stands deserted, rotting away, and beyond hope of restoration.</p> <p>The house is 5 bays wide with a central door which had an overlight from one existing frame, it appears that the windows were 6/6. There are double chimneys at each end of the house, separated from the wall above the first storey level. There were one storey frame pents between these chimneys but only piles of rotting boards remain. One of the chimneys has an opening on the outside, and from the marks on the brick it appears that a kitchen wing was once attached to the house at that point. There are 3 dormers on the front and back of the house. The first mention of the house occurs in 1691 when Captain Richard Ladd left it in his will to Christ Church Parish. From the framing now exposed it appears that this was a one room house with a narrow winding staircase to the loft above. Another room was added in back of this about 1720 or so. Both of these old rooms have chair rails beaded on both sides and very simple door and window frames surrounded by simple molding like that found on the fireplace. The fireplaces in these rooms had their frames covered with plaster and were surrounded by a flat board edged with molding. The two loft rooms above are similarly treated. In 1750-1780 the central hall and the two rooms on the other side of the hall were added. No panelling remains in these rooms. The stair hall had square balusters and scrolled step-ends. The second floor balcony rail curved as is typical of many houses in Calvert County. The boards on the staircase itself are vertically applied and are beaded. The interior woodwork in this house*</p>			
5. PHYSICAL CONDITION OF STRUCTURE		Endangered Interior Exterior	
*is very similar to that in the old part of Parran's Park.		Deteriorating rapidly. Something should be done to save the existing moldings and panelling from further vandalism.
