Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

Summary paragraph:

Greenmount is a linear community developed one lot deep along Maryland Route 30/Hanover Pike. The majority of its principal resources are residential. Perhaps four of these were erected during the antebellum period and a few more late in the nineteenth century. Most, however, are late Victorian dwellings, foursquares, and bungalows built during the first third of the twentieth century. The community's few principal nonresidential resources include a stone mile marker from the opening of the nineteenth century, and a store and Methodist church erected early in the twentieth century. Its secondary resources are outbuildings associated with the residences, the most notable of which are three large bank barn raised in the late nineteenth or early twentieth century. Modern residential and nonresidential resources are scattered throughout the district. The overall appearance of the district is much like that of the town of Hampstead, which borders it to the south. Indeed, Greenmount is largely a northern, early twentieth-century, suburban extension of Hampstead.

Description

Greenmount is a linear, one-lot-deep community extending along Maryland Route 30 or the Hanover Turnpike north of Hampstead. The majority of its primary resources are residential and most of these residences have been erected since 1900, when the community first began to fully develop. Its non-residential residences, with the exception of an early mile marker and a few bank barns, also date from the twentieth century. The survey district's primary resources are about evenly divided between buildings of frame and brick or brick veneer. Because of the late date of its development, the district contains no log resources.

Greek Revival-style features, most notably cornerblocks, mark the five-bay, gable-end brick dwellings at 1819 Hanover Pike (#39) and 2008 Hanover Pike (#64) as antebellum structures. (Lengthened front bays and brackets at 2008 Hanover Pike are later alterations.) Two more plainly finished gable-end frame dwellings--the three-bay-wide house at 1809 Hanover Pike (#40) and the four-bay-wide house at 1933 Hanover Pike (#31)--might also have been built in mid century, though perhaps after the Civil War.

The development of Greenmount did not begin in earnest until the close of the century, however. At this time, and into the teens, two-story gable end dwellings continued to be constructed. These were formed of both frame (2103 Hanover Pike/#13) and brick (1943 Hanover Pike/#28). These dwellings were joined by houses with more complicated L-and T-plan forms that reflected Victorian tastes. Victorian decorative devices also mark these dwellings, such as elongated windows and ornate porches with turned posts, spindles, and brackets (2022 Hanover Pike/#65), and conical-roofed corner towers (2024 Hanover Pike/#66 and 2112 Hanover Pike/#67). The heaviest concentration of late nineteenth- and early twentieth-century dwellings in the district is near Greenmount Church Road on both sides of Hanover Pike.

The early twentieth century also saw the introduction of the foursquare and bungalow forms to the survey district. The foursquares are largely concentrated near Greenmount Church Road and at the northern end of the district on the east side of Hanover Pike. Many of the bungalows are located south of Greenmount Church Road on the west side of the turnpike. Brick or brick-veneer form the foursquares, a number of which are quite similar design to each other and to groups of contemporary foursquares located to the south along Hanover Pike in Hampstead. For example, the foursquares at 2135 (#2) and 2131 (#4) Hanover Pike appear to have sprung from the same plans, as do those at 2133 (#3) and 2139 (#5) Hanover Pike. The survey district's bungalows are more modest, frame, one- and one-and-a-half-story structures, such as the neighboring houses at 1906 (#48) and 1908 (#49) Hanover Pike. Craftsman-style porches with tapered posts on frame or masonry piers adorn many of the survey districts foursquares and bungalows, and some its gable-end and early Victorian dwellings as well. Residences erected within the past 50 years in the district are generally small, one-story structures, such as the house at the corner of Hanover Pike and Zakira Court (#62).

The Greenmount survey district includes relatively few non-residential resources, with the exception of garages and other outbuildings located behind its houses. The most notable of these non-residential resources are a mile marker, a store, a church, and three bank barns. The small stone mile marker north of 2027 Hanover Pike (#16) probably dates from the opening decade of the nineteenth century, when the Baltimore and Reistertown, later the Hanover, Pike was established. Heavily worn, it appears to have the mileage to Baltimore carved into its face. A forebay timber bank barn behind the house at 1936 Hanover Pike (#60) is typical of the county's many late nineteenth- and early twentieth-century bank barns. It carries a date of 1884 at one gable end. The other two bank barns in the survey district (south of 1933 Hanover Pike/#32 and 1819 Hanover Pike/#39) date from the late nineteenth or early twentieth century. A large, two-story, gable-front, frame general store (#20) stands vacant along the former Baltimore and Hanover Railroad tracks, just east of Hanover Pike. It may also have served as a depot for the rail line. The most prominent nonresidential resource within the survey district is the former Greenmount United Brethren in Christ Church (#26), erected in 1924 at the northwest corner of Hanover Pike and Greenmount Church Road. It is a Gothic Revival-style building with rough, dark-gray, granite walls and limestone accents. Other nonresidential commercial and industrial buildings have been erected within the survey district and to its north, which is dominated by a modern shopping center.

INVENTORY LIST OF SURVEY DISTRICT RESOURCES

Key

ID#: The principal resource on a lot is assigned a number. Additional resources associated with that resource, such as garages and barns, are assigned the same number and a letter. Outbuildings insubstantial in size or scale are not included in the inventory list. The district map accompanying this inventory, which is based upon an enlargement of the Lineboro and Hampstead, MD USGS maps, is labeled with the ID numbers of the principal resources.

STATUS: The letter "C" denotes a resource that contributes to the survey district. "NC" denotes a resource that does not contribute to the survey district.. The reason a resource was deemed noncontributing is given in this category: "NC-age" indicates that the resource was built within 50 years of the preparation of this form, "NC-alt" that the resource, although more than 50 years old, has lost its integrity through alterations. Greenmount has been recorded as a Survey District rather than a historic district and is not recommended as eligible to the National Register

as a historic district. The use of the terms contributing and noncontributing relate to a resource's contribution to the *survey district*, rather than to any National Register-eligible historic district.

ADDRESS: The address listed is the present address of the resource.

STYLE/FORM: The primary style and/or form of a resource is listed in this category. The style/form for outbuildings is generally given as "functional."

MATERIAL/CLADDING: The primary construction material and/or cladding of a resource is listed in this category. Common abbreviations utilized are "asph" for asphalt, "asb" for asbestos, "alum" for aluminum, "vert bd" for vertical board, "vnr" for veneer, "wthrbd" for weatherboard, "blk" for block, and "Germ" for German.

CONDITION: "Exc" equals excellent. "Det" equals deteriorated.

DATE OF CONSTRUCTION: Because of the late appearance of Victorian forms in the county, residences that might appear to have been built in the late nineteenth century were generally assigned a date range of 1900 to 1920.

[]: Additional notable information about a resource is given briefly in brackets underneath its entry.

Prepare both a summary paragraph of significance and a general statement of history and support.

Summary paragraph

The community of Greenmount did not develop until the opening of the twentieth century. Prior to that time, it was largely a stretch of the Hanover Pike located just north of the town of Hampstead and south of Manchester. Most of the resources within the survey district were erected during the first third of the twentieth century utilizing the common, popular gable-end, late Victorian, foursquare, and bungalow forms. They are almost all residential with few commercial or other service buildings, for the community has always been more of an off-shoot (or even suburb) of Hampstead than an independent town. The Greenmount survey district is not believed to be eligible for listing in the National Register under any of its Criteria. It is not believed to be eligible under Criteria A or B, for it does not represent a pattern of community planning or development and is not associated with other significant events or with any known significant persons. It is also not believed to be eligible under Criterion C, for although a distinguishable entity, it is not believed to be a significant one.

History

The oldest resource in the Greenmount survey district is a small stone mile marker located north of 2027 Hanover Pike (#16). It probably dates from the opening decade of the nineteenth century, when the Baltimore and Reistertown, later the Hanover, Pike was established. The turnpike played a large role in the subsequent development of the community, which awaited almost a full century.

In 1862 (Martenet) farmsteads dotted the Hanover Pike between Hampstead and Manchester, the principal market towns of northeast Carroll County. Some of these residences, perhaps four of which survive (1819 Hanover Pike/#39, 2008 Hanover Pike/#64, 1809 Hanover Pike/#40, and 1933 Hanover Pike/#31), were located within the present community of Greenmount. By 1877 (Lake, Griffing, and Stevenson) a United Brethren church had appeared on the map, but the community was still an undifferentiated assortment of farmsteads located in relation to farmland and the turnpike. (The congregation was established in 1871, according to the date stone of the

Greenmount Methodist Church at Hanover Pike and Greenmount Church Road (#27), its successor.)

Between 1876 and 1879, the Baltimore and Hanover (later Western Maryland) Railroad was built through northeastern Carroll County. It included stations in Hampstead and in Greenmount, where it swung north, bypassing Manchester. The line increased growth in Hampstead but, perhaps Greenmount was so close to that established town, it had little immediate impact on Greenmount. The community may have acquired its name around this time, but it is not identified on a map as Greenmount until the drawing of the 1916 atlas of the county (Rand McNally).

Substantial development began in Greenmount around the turn of the century. Between about 1900 and 1920 a group of two-story brick and frame residences rose just north and south of Greenmount Church Road, on both sides of Hanover Pike. At the same time a general store (#20), which also perhaps served as a depot, was built near these residences just east of the turnpike along the tracks. The dwellings look much like those built around the same time in Hampstead. By 1930 they had been joined by a collection of small undistinguished bungalows. In 1924 a new United Brethren Church was constructed at the site of its predecessor.

Since 1950 modern houses have been erected as infill within the district. These include clusters of houses on Zakira Court opposite the church and between the houses at 2024 (#6) and 2112 (#67) Hanover Pike. A few modern services have been added to the community, such as doctors' offices (2113 Hanover Pike/#10), light industrial activity (north of 2027/#16 through 2025B Hanover Pike/#19), and a restaurant (north of 1804 Hanover Pike/#45). However, the community has largely remained a linear residential one, with heavier development occurring to its north and in Hampstead to its south. It has never developed into a true town.

Evaluation

The Greenmount survey district is not believed to be eligible for listing in the National Register under any of its Criteria. It developed incrementally and was not laid out as a town, as was Hampstead to its south and Manchester to its north. It did not develop as a direct result of the railroad, as did a number of communities in northeastern Carroll County, including Maple Grove and Melrose to its north. Accordingly, it does not represent a pattern of community planning and development. It is not associated with any other significant events and is therefore not believed to be eligible under Criterion A. Because of its lack of association with any known significant persons, it is also not believed to be eligible for Register listing under Criterion B. The survey district forms a distinguishable entity, but not a significant one. It is generally marked by a mixed collection of undistinguished resources similar to those found in more significant, distinguishable, and intact nearby communities, including Hampstead, Maple Grove, Manchester, Melrose, and Westminster. It is therefore also not believed to be Register eligible under Criterion C.
