DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

This small octagonal concrete structure rises two stories above its foundation abutting the drawbridge which carries Maryland Route 213 over the Sassafras River. The building is highly decorative, with a bell-cast metal roof topped by a round finial, and a variety of ornamental details cast into its concrete walls. The first floor has the entrance in the east side, with 1/1 casement windows in the others; on the second story, double 1/1 easements pierce the north, south, east, and west walls, with single 1/1 casements on the other four sides. A moulded frieze and round arches with Keystones are cast into the concrete above the second-story windows, and a broad cast drip moulding runs around the building at the level of the second-story window sills. The first-floor window sills have similar treatments, and a cast Neo-Grec motif embellishes the north and south facade below sill level. A drip moulding visually separates the building from the concrete pier upon which it rests.
