

F-4-61

Recher-Morgan Farmstead
Wolfsville vicinity
Private

Ca. 1841-1930

The Recher-Morgan Farmstead is an agricultural grouping centered on a circa 1841 log dwelling which was extensively improved in the 1880's with the application of german siding, a bracketed one-story porch, and a two-story rear wing. The farmstead also contains a log summer kitchen which local tradition states was an early schoolhouse which was moved to the farmstead after its closing in the late 19th century. Other outbuildings include a frame bank barn, two chicken houses, a frame hog barn, a butchering shed, a frame smokehouse, and a privy. Most of the structures date from the period after 1880. The log house was probably built by John Recher, who sold it to James W. Morgan in 1883, the founder of a furniture factory across the road from the house, which became regionally famed for its well-made, simple furniture. The factory, later a planing mill producing building materials, was the forerunner of the present Morgan-Keller, Inc., a large regional contracting company. The mill buildings have been demolished, but the Recher-Morgan Farmstead is conveys a feeling of the late 19th century period in which the rural industry was begun.

CONTRIBUTING RESOURCE COUNT: 11

The Recher-Morgan Farmstead is an agricultural complex centered on a circa 1845 two-story log dwelling with german siding and a one-story bracketed porch and its associated domestic and agricultural outbuildings, which include a log summer kitchen which was originally built in the mid-19th century as a school in another location, a frame bank barn of the last quarter of the 19th century, and a frame chicken house, hog barn, corn crib, privy, smokehouse, and two other frame outbuildings, ranging in date from about 1875 to 1930. The farmstead is located on the east side of Brandenburg Hollow Road near the Wolfsville Ruritan Community Park on the west side of the road, the site of the Morgan Mill, with which the Recher-Morgan Farmstead is historically associated, about 1/2 mile northeast of Wolfsville, Frederick County, Maryland. The dwelling faces west toward the road and the outbuildings are located east of the house.

The dwelling has a three-bay west elevation with a center entry. The one-story porch, probably added in the 1870's or 1880's, was entered via steps at the north end of the wood deck, but these have been removed and a reproduction of the scroll-sawn balustrade installed at the north side. The principal entry is currently located in the rear wing. The window and door surrounds are peaked, a vernacular version of a pediment common in the Greek Revival rural house in central Maryland. The windows are 2/2 and the door is paneled with a glazed upper section. The roof is pressed metal. The chimneys are located at the north and south gable ends. The rear wing was a later addition to the house, according to Mrs. Ida Rae (Morgan) Leatherman, a descendant of J. W. Morgan, the founder of the mill. It has frame structure, but is also covered with german siding. A one-story porch is located in the northeast angle formed by the wing and main section. The entrance to the cellar under the main section reveals the spring which flows through the stone foundation. The interior of the house has been altered, with the fireplaces closed off and the mantels removed and stored in one of the outbuildings for future rehabilitation of the house. There are enclosed stairways in both sections near the original chimney locations. The two-room plan of the log section has been changed by the insertion of a partition wall in the north parlor.

Domestic outbuildings:

Smokehouse: The frame smokehouse is located directly east of the rear wing of the dwelling. It has german siding, a composition roof, and a vertical board door in the north elevation. Its date is probably in the last quarter of the 19th century.

Garden shed: The small frame garden shed is located just west of the smokehouse. Its original use is unknown. It has german siding, 2/2 windows in the west and south elevations and a vertical tongue-and-groove door in the north elevation. The gable roof is composition material. It was also built in the last quarter of the 19th century or first decade of the 20th century.

Prepare both a summary paragraph of significance and a general statement of history and support.

The Recher-Morgan Farmstead is primarily significant for its association with the Morgan Mill, being the homestead of James W. Morgan, the founder of the furniture factory across the road from the farmstead in the 1880's. The house was a log dwelling probably built by John Recher about 1841. James W. Morgan (1833-1902) operated a paper mill near Myersville with his father and also was a teacher and furniture maker prior to purchasing the property near Wolfsville where he built a furniture factory in about 1883. He married Delilah Recher, the daughter of John Recher, from whom he purchased the farmstead and undoubtedly made the exterior improvements including the application of german siding and the porch and the building of many of the outbuildings. The farmstead's high level of exterior integrity conveys a strong feeling of the late 19th century period. The log summer kitchen, which may have been used originally as a schoolhouse, may have architectural and educational significance as the only identified log school of the 19th century in Frederick County. Further survey work may show that others exist, and documentation of its use as a school may be impossible beyond local tradition and family information regarding its origin.

Morgan's furniture factory became famous throughout the region and examples of the furniture made at the mill are found in many local private homes. The mill eventually became a planing mill in 1905 under Irving R. Morgan. In 1962, Morgan incorporated a contracting business with Laurence E. Keller, the beginning of Morgan-Keller, Inc., a large regional contracting firm. The mill continued to operate until 1966. After its closing, the property was sold to the Wolfsville Ruritan Club which demolished the deteriorated mill buildings except for one building repaired for use as a meeting house. The Recher-Morgan Farmstead remained in the Morgan family until 1922.

7.1 Description (Continued)

Summer kitchen/schoolhouse: The log summer kitchen is a one-story structure with german siding and an exterior stone and brick chimney on the east gable end. The roof is standing seam metal and the windows, one in the west gable end, and two in the south elevation, are 2/2. The door in the south elevation is vertical flush boards. The north elevation has no openings. The building's origin as a schoolhouse was related by Mrs. Leatherman, whose older siblings attended the school in the late 19th century, prior to its being closed and moved to the farmstead for use as a summer kitchen. No identifying features of its school use are visible and it is currently used as a storage building. Pending further information on this building, it is the only log schoolhouse identified in the current survey.

Garage: The frame garage appears to have been built in the 1930's with a concrete foundation and german siding. The windows are 2/2 and the roof is standing seam metal. At the east gable end, are sliding tongue-and-groove doors with a loading door above to the loft above the main floor space. In the west elevation is a vertical tongue-and-groove door and a single 2/2 window is located in the south elevation.

Privy: The 2-seat frame privy is a square plan structure with vertical siding and a corrugated metal shed roof. The building probably was erected in the early 20th century.

Agricultural outbuildings:

Barn: The frame bank barn appears to date from the period 1875-1900. Its interior structural beams have circular saw marks and the vertical siding of the exterior also appears to have been applied in the early 20th century. The lower level on the south has a flush board enclosing wall. The roof is standing seam metal and a wagon shed and corn crib are attached to the west gable end.

Corn crib: The free-standing frame corn crib is located east of the garage. It has vertical siding and a standing seam metal shed roof. It was probably erected in the first decade of the 20th century.

Hog barn: The frame hog barn is also a structure built in the first decade of the 20th century. It has vertical siding, a standing seam metal roof with an overhang on the south elevation, covering an exterior feed bin. The foundation is concrete and the wood-fenced wallow is located on the north elevation under an extension of the roof.

Butchering shed: This frame shed is located east of the hog barn. It has german siding and the foundation is concrete. The three-bay south elevation has a vertical tongue-and-groove door flanked by 2/2 windows with molded lintels. Windows are also located in the east and west elevations and the north has no openings. The butchering shed was probably built at the same time as the hog barn in the first decade of the 20th century.

Chicken house: The large frame chicken house is located east of the shed described above and has a standing seam metal shed roof, german siding, and a five-bay south elevation with a center entry, molded lintels, and replacement 6/9 sash. This chicken house probably dates from the 1920's and has been repaired in recent years, although it is currently used for storage.
