Doub-Routzahn Farmstead
Myersville vicinity
Private

Ca. 1840-1940

The Doub-Routzahn Farmstead was originally an agricultural complex centered on the main dwelling built about 1840, with several domestic outbuildings, and an agricultural group dominated by a large bank barn. The outbuildings include a brick smokehouse, a dairy, and a two-story stone and brick summer kitchen which may have also been used as slave quarters. In the agricultural grouping are a wagon shed/corn crib, a garage, a possible shop, and several smaller frame sheds. The bank barn was extended in the early 20th century to provide a milking room and a concrete block milk house was also added. The domestic buildings have been much altered since about 1945, but the spatial arrangement of the original farmstead is fairly clear. The agricultural buildings added in the last quarter of the 19th century represent the transition of agricultural technology and the extension of the barn for dairy operation reflects the change from grain production to milk as the principal farm product of the region in the early 20th century.

CONTRIBUTING RESOURCE COUNT: 13

The Doub-Routzahn Farmstead is an originally agricultural complex now used as a private residence, centered on a circa 1840 brick two-story dwelling with a mid-20th century, full-height portico and other recent alterations, and its associated domestic and agricultural outbuildings ranging in date from about 1840 to 1940, including a brick smokehouse, a stone and frame dairy, a two-story stone and brick summer kitchen and possible slave quarters, a frame privy, a frame and stone bank barn, two wagon sheds, and other agricultural outbuildings. Three non-contributing modern garages and sheds are also included in the group. The farmstead is located on the west side of Church Hill Road about one mile northeast of Myersville, Frederick County, Maryland. The main elevation of the dwelling faces south and the complex is visible from Church Hill Road at the end of a driveway passing a small pond east of the domestic grouping.

The dwelling's south elevation is laid in flemish bond and is painted white. The portico has square columns rising to the cornice line of the building. The porch platform is brick. The topography of the site slopes downward to the south with landscaped terraces on stone retaining walls. The principal elevation has five bays with a center entrance and a mid-20th century Georgian Revival style door surround featuring a broken pediment. The doorway has a four-light transom and a modern replacement door. The window openings have gauged brick arches and 6 sash. Replacement shutters flank the windows. The bond pattern on the east and west gable ends is 5:1 American and is repeated in the 1-1/2 story rear wing, with a corbeled cornice. The roof of the entire house is slate. Interior end chimneys rise at the east and west gables. The gable ends each have two bays of 6/6 windows on each floor level. The rear wing has a modern frame addition of one story on the west elevation with pressboard siding. An interior end chimney is located at the north end and the sash is 6/6 as on the main section. Replacement shutters are also present. A brick-paved patio is located on the east side of the wing. The interior was inaccessible for this survey.

Domestic outbuildings:

Dairy: The one-story frame and stone building is located immediately northwest of the north end of the rear wing of the house. Its use is unclear, but its position, rectangular form, and lack of windows suggest that it may have originally been a dairy or cooling shed. Its raised foundation is partially stone, and some sections have been replaced with concrete block. The exterior is covered with german siding and a 5-panel door is located in the east elevation. The gable roof is covered with corrugated metal, possibly concealing original wood shingles. The date of the building appears to be at least about 1875-1900. Interior examination should reveal further information on its use and date.

Smokehouse: The brick smokehouse is located north of the dwelling on the higher slope of the farmstead site. It is a rectangular one-story building in 5:1 American bond with a vertical board door in the south elevation. The gable in the east

Prepare both a summary paragraph of significance and a general statement of history and support.

The Doub-Routzahn Farmstead exemplifies the transition of a mid-19th century farmstead from agricultural to private residential use in the mid-20th century. It retains features from its possible establishment as a typical farm of the period about 1840-1870 in the brick dwelling with domestic outbuildings and the frame and stone bank barn, with the additions of late 19th century outbuildings which reflect changes in agricultural technology such as the wagon shed/corn crib, the garage, and the proliferation of various sheds in the agricultural grouping. The agricultural group also shows the early 20th century changes from grain cultivation to dairy operations which predominated in Frederick County from about 1910 into the present, in the extension of the barn to include a milking room and the construction of a lo and milk house. Architecturally, the farmstead is a fair example of vernacular architectural style in the period 1840-1940, as the principal domestic buildings have been considerably altered and the integrity of the group as a whole is moderate.

Title research indicates that Abraham Doub purchased approximately 233 acres of the tract called "Hamburg" in 1840. It passed to his son Enos Doub in 1854 and to John H. Routzahn in 1866. Ezra Routzahn purchased the farm in 1870 and it was probably under his ownership that the agricultural group increased in numbers of structures. Routzahn was one of the founders and first president of the Myersville Savings Bank in 1899, a position of local prestige which reflected his prosperity and a level of general respect for his obvious success as a farmer. The farm remained in the Routzahn family until 1944. The possibility of slaves residing in the brick outbuilding has not been researched; however, the size of the outbuilding compared to other summer kitchens or wash houses in the region suggests that the outbuilding may have been concurrently used as living quarters by domestic servants or slaves. Tax records may verify whether the Doub or Routzahn families were slaveholders.

7.1 Description (Continued)

elevation is plastered. The roof is covered with corrugated metal. The interior still has a "tree" with a wheel and hooks for hanging meats. The building is somewhat deteriorated and is currently partially filled with wood debris. Its date is probably 1840.

Summer kitchen/slave quarters: The two-story stone and brick building is located east of the house and a non-contributing concrete block garage. It has been considerably altered in the 20th century, particularly its interior finishes, and its exterior is painted white. It is sited at a slight angle from the house, with an exposed stone foundation on the southeast elevation, where a beaded vertical board door with mid-19th century hardware is located. A pair of 6/6 windows in this level are modern alterations. The upper story has 6/6 windows and an exterior stone and brick chimney are located on the east gable end. A second interior chimney is located at the west gable end. The roof is slate. On the north elevation is a modern one-story porch with square posts. A replacement door gives access to the upper level through the porch. The interior of the building was inaccessible, but its original use as a summer kitchen and possible slave or servant quarters is apparent from the exterior features and siting. The date is less certain, but may be contemporary with the house.

Privy: The frame privy is located west of the house at the end of a concrete walk through the garden on that side of the dwelling. It has beaded vertical siding and a corrugated metal shed roof, with a door in the west elevation. The privy probably dates from about 1875-1900.

Agricultural outbuildings:

Frame shed: Immediately west of the privy is a two-story frame building possibly used as a shop or other agricultural outbuilding. It has a concrete block foundation, german siding, and a corrugated metal roof. An exterior concrete block chimney is located on the north elevation. The south elevation has an irregular bay arrangement with three on the lower level and two on the upper level. The centre entrance is a vertical board door. A missing door on the upper level of the west elevation shows an open floored space with 6/6 windows. This building may date from the period 1875-1900.

Wagon shed: The frame wagon shed is located on a concrete foundation north of the frame shed and a non-contributing plywood shed. The wagon shed has board and batten siding and a standing seam metal roof. The shed may be a circa 1930's building.

Bank barn, silo, and milk house: The large frame bank barn is located at the west side of the farmstead and has a stone foundation with the stall level on the south elevation. The upper siding is vertical tongue-and-groove and plain vertical boards. The roof is corrugated metal. The stall level is walled with stone and an extension on the west end is enclosed with horizontal wood siding to form a milking room. This extension was probably made in the late 1920's or early 1930's. A brick silo base is located near the northwest corner of the barn and a concrete block milk house, built at the same time as the milking room extension, stands next to the west end of the barn.

7.2 Description (Continued)

Wagon shed/corn crib, frame tool shed, and garage: These three buildings are located south of the dwelling on a farm lane leading off the main driveway toward the agricultural grouping west of the house. The wagon shed/corn crib, built probably in the period 1875-1900, has a single corn crib on the south side of the drive-through passage and a shed extension on the north side. The exterior is vertical board siding and the roof is standing seam metal. The frame tool shed is located near the junction of the farm lane and driveway and has a stone foundation exposed on the south elevation. The upper level is covered with vertical board siding and a vertical board door opens on the north elevation. Its original use is unknown, but its location and general form suggests a possible blacksmithy, although there is no evidence of an exterior chimney or vent. The roof is corrugated metal. The frame garage was probably built to shelter farm equipment during the period 1875-1900. It has a standing seam metal gable roof and vertical board siding. Double swing doors are located in the east gable elevation.
