"Lucky Discovery"

Woodsboro, Maryland

Private

The Frederick Musser House is a 2 story fieldstone and brick dwelling with a side gable roof. According to the owner, Dr. Frederick Musser, this house dates back to 1750. Several aspects remaining of the original fabric serve to date the building to the late eighteenth century including wattle and daub filling between the framing. The first story of the building is stone; the second story was originally brick. This appears to be a unique use of materials for the region. The interior plan was a central passage plan which had English precedents. The building, in its original form, was unusual in a region predominated by German architectural traditions. It was probably one of the earliest permanent structures built in the vicinity of Woodsboro.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

The Frederick Musser House is a 2 story fieldstone and brick dwelling with a side gable roof that is situated approximately one-quarter of a mile off of Route 550 in the vicinity of Woodsboro, Maryland. The principal elevation faces north and is 5 bays in length. The property is composed of 100 acres and 8 domestic and agricultural outbuildings.

The first story is composed of uncoursed rubble fieldstone with heavy mortar; the second story is brick but has been sheathed in aluminum siding. The side gable roofline of composition shingling is widely pitched. Two interior end brick chimneys with three ceramic pots each sit on the ridgeline. Fenestration throughout the elevations consists of 6/6 replacement windows. The front facade has symmetrical openings with center door placement and 6/6 replacement windows. A two story porch with square columns covers the full facade. The second floor has a center door symmetrical to the first floor door allowing access to the porch. A two part addition extends from the rear (south) elevation: a 1 story stone section with a tall brick chimney, 1 bay wide and deep, has a gable roof of composition shingling running north to south; an aluminum sided section is approximately 28 years old and encloses a modern kitchen with an open deck extending from the back door. The east elevation includes the main block of the building and the two bays of the kitchen addition. It contains a side door into the basement that has a stone arch above its replacement. Both east and west elevations have 6/6 replacement windows positioned assymetrically.

The first floor of the interior was accessible for examination. The owner exposed aspects of the interior structure including wattle and daub between locust posts with horsehair plaster, brick nogging between locust posts and chestnut ceiling beams. The original flooring is chestnut. The basement reveals hand hewn beams, bark on the floor joists and a large stone fireplace. The owner made mention of his renovation activities in the early 1960s which required much of the original fabric to be replaced with new materials given the poor condition of the building.

Outbuildings on the property are mainly to the west of the main house. A 1 story springhouse lies to the east of the house and faces west. It is of fieldstone with frame gable ends of wide clapboards. Its gable roof is composed of standing seam tin. A corral of concrete block lies directly west of the house. A concrete shed with a standing seam roof built on a stone foundation is adjacent to the corral. A 1 story aluminum outbuilding also is aligned with the other buildings. A concrete barn with a gambrel roof of standing seam tin lies to the northwest of the main house. It has five 5 light fixed windows in a ribbon along its east elevation. Its principal facade faces north and contains a sliding door, louvered windows and a hood at the peak of the roofline. The eaves of the roof are flared. An arched window lies beneath the hood of the facade. The gambrel end is of clapboard. A 1 story concrete block dairy is attached to the barn at its south wall. A pond lies directly south of the house.

Prepare both a summary paragraph of significance and a general statement of history and support.

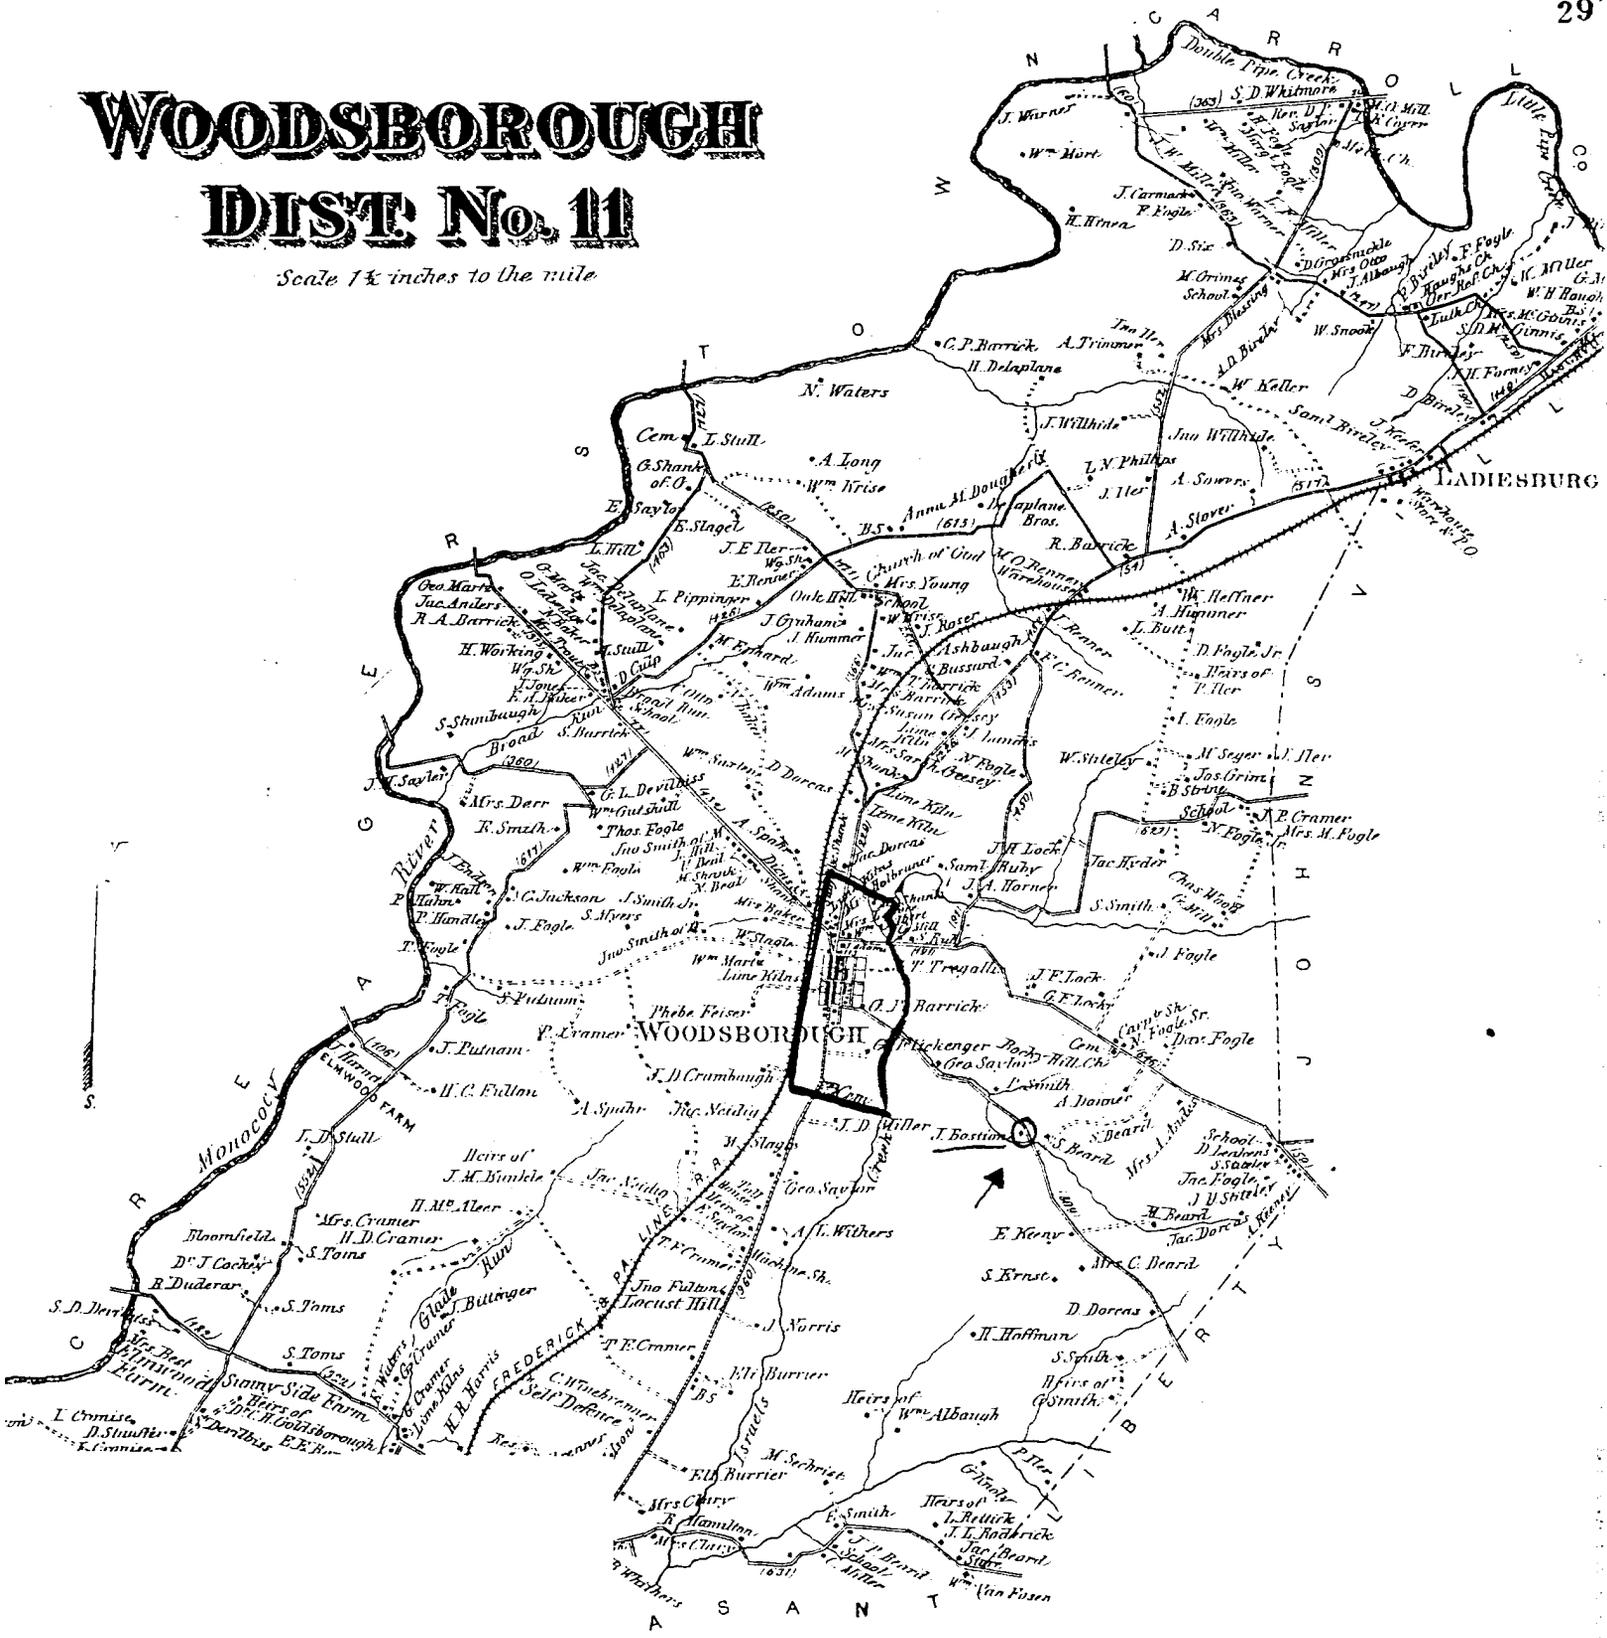

According to the owner, Dr. Frederick Musser, this house dates back to 1750. The property associated with the house has been known as "Lucky Discovery", "Resurvey of Andrew's Chance" and "Smith's Plot". In 1873, the Titus Map shows J. Smith's heirs as owning the property; on the 1858 Bond Map, a J. Bostion resides on the property. A large number of contributing outbuildings reveal domestic and agricultural uses.

Although the property has been altered through renovations in the 1960s, several aspects remaining of the original fabric serve to date the building to the late eighteenth century including wattle and daub filling between the framing and horsehair plaster. The first story of the building is stone; the second story was originally brick. This appears to be a unique use of materials for the region. The interior plan was a central passage plan which had English precedents. The building, in its original form, was unusual in a region predominated by German architectural traditions. It also was probably one of the earliest permanent structures built in the vicinity of Woodsboro.

The property was most likely associated with agriculture from its beginnings although no original agricultural outbuildings remain. An early twentieth century dairy barn testifies to later agricultural pursuits that may have been more crop-oriented initially. A stone springhouse is probably the oldest outbuilding that may date to the house's origins.
