

FHD-793
FREDERICK ARMORY
Frederick
Public (Restricted)

1913

The Frederick Armory is a two-story brick structure with full basement designed by architect John B. Hamme. The facade is executed in Flemish bond, and emulates a medieval fortification. A newer and nearly identical facade has been added to the rear of the building. The Armory is situated on the north-east corner of Baker Park and is across the street from the western boundary of the Frederick Historic District.

The Armory was built for Company A, First Regiment of the Maryland National Guard. Company A traces its origins to the band of Frederick riflemen led by Michael Cresap, who joined Revolutionary War troops in June of 1775. The Armory has served the City of Frederick in numerous ways over the years as much needed community meeting and convention/exhibition space,

Describe the present and original (if known) physical appearance

The Frederick Armory occupies a 0.7 acre niche at the northeast corner of Baker Park, a large city property through which runs Carroll Creek. Immediately to the south of the Armory building are pedestrian walks, a band shell, and a much used and well equipped playground.

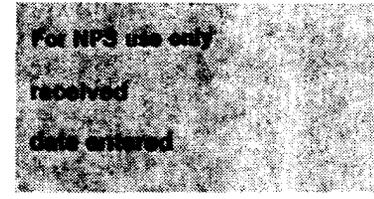

The building, setting on a full basement, is two stories tall and emulates a Medieval fortification. The east and west facades are connected by a one-story drill hall. A bronze plaque in the center hall names John B. Hamme as architect and Lloyd C. Culler as builder, and dates the building 1913. The center front block is executed in red brick laid in Flemish bond pattern. The front (Bentz Street) facade faces east and is comprised of symmetrical two-bay sections on each side of a center block containing three-story towers. The side sections contain two windows at basement level with 2/2 sash and stone water table. First and second floor windows occur two at each level. These have 4/4 sash and brick segmental lintels and stone sills. A dentilled cornice crosses each side section (10 dentils two headers tall per section) surmounted by 6 crenelles with stone caps at the roofline.

The center of the front facade is characterized by two three-story towers flanking a one-bay center section with stone segmentally arched doorway. The stone water table corresponding to that of the side sections crosses the bases of the towers. Towers are octagonal and contain one window in each of their three full sides at first and second floor levels, 2/2 replacement sash, stone lintels and sills. A band of stone molding corresponding to the line of the dentilled cornice of the side sections crosses the towers above the second floor windows. The third floor of the towers feature narrow decorative slots (one header wide) centered over the windows of the lower floors. The slots have stone caps and sills. At the roof levels of the tower are two narrow stone strip moldings with dentils between the strips, one dentil to each of the three full sides of the towers.

The center section of the front facade features wide double doors recessed 3-4 feet under the segmental arch. Surmounting the arch at the front wall plane is a rectangular stone panel identifying the building as the possession of the Maryland National Guard. At second floor is a segmentally arched window composed of three 2/6 casement windows under a 6-pane horizontal strip. The window arch is finished at the corners with square stone pieces. The dentilled cornice of the side sections continues across the center block and four stone capped crenelles top the center section. The center doorway is accessed by a cement ramp leading from the north (Second Street) side and gracefully turning cement steps leading from the front (Bentz Street) sidewalk.

The south (Baker Park) side of the front block contains four bays with one window each at basement, first and second floor levels, 4/4 sash on the upper floors. All windows have brick segmental arches and stone sills. The dentilled cornice and crenelled roofline continue as on the front facade.

Frederick County, Maryland

7. DESCRIPTION (continued)

The rear first floor drill hall over full basement is executed in red brick, common bond, and contains 8 bays separated by buttresses with stone capped set-backs corresponding to the bases and tops of the of the first floor windows. At basement level are one window per bay, with 4/4 sash, with brick segmental arches and stone sills. At first floor level are three windows per bay, 4/4 sash, with round brick lintels and stone sills. The last (extreme westernmost) bay is wider than the others, sits on a stone foundation and contains inside a slightly indented segmental arch three windows, 4/4 sash with rounded arches and stone sills. Above the first floor windows just under the segmental arch are two pairs of 6/6 sash windows with stone sills. Surrounding brick arch is accentuated with white stone keystone and corner pieces. Both sides of the drill hall are identical.

The rear (west) facade, executed in buff-colored glazed brick in Flemish bond pattern, is apparently a later addition. It does not appear in a 1914 photograph of the building (on file at the offices of the Frederick News Post). This rear facade is identical in structural details to the front (Bentz Street) facade except that it rests on a stone foundation, it omits the dentilled cornice, and is composed of a different kind of brick. Two flights of stairs lead up from the lawn under the towers to a common landing in front of the center double doors.

10. GEOGRAPHICAL DATA:

Verbal Boundary Description:

In the City of Frederick:

BEGINNING for the portion hereby intended to be conveyed at a stake on the West side of North Bentz Street at the original north east corner of said lot and running thence N. 81-3/4 degrees West 180 feet, N. 16-3/4 degrees East 5.3 feet to the south side of West Second Street Extended; thence by and with the south side of said street N 85½ degrees North 64.1 feet, thence S 4½ degrees West 70.07 feet, S. 84¼ degrees East 103.05 feet, N. 16-3/4 degrees East 8 feet, S 82¼ degrees East 80/70 feet, S. 79 degrees East 88.28 feet, N. 16.3/4 degrees East 70.75 feet, to the place of beginning...

Boundary Justification:

The nominated property comprises the total parcel historically associated with the resource.

Specific dates 1913 **Builder/Architect** Architect: John B. Hamme
 Builder: Lloyd C. Culler

Statement of Significance (in one paragraph) Applicable Criteria: A, C
 Applicable Exceptions: none
 Significance Evaluated: state

The Frederick Maryland Armory is primarily significant for its association with the reorganization and expansion of the National Guard system in the twentieth century. It derives additional significance from its role as a social center for its community, a function it has served continuously since its construction date. Architecturally, the building embodies the distinctive characteristics of its type, including a T shaped plan with a two-story front "head house" section and a one story perpendicular "drill hall" extending to the rear; its facade is detailed to recall Medieval fortifications, with towers flanking the central entrance, crenellated parapets, and strip buttresses.

The Frederick Armory was designed by John B. Hamme and built by Lloyd C. Culler in 1913. Hamme was a York, Pennsylvania architect and Culler a local contractor who also constructed several buildings at the Hood College Campus in Frederick.

The design is the product of the study of ideas gathered after inspection of several northern armories. Although the main purpose of the Armory was to maintain a "stable and proper" militia, it was also planned from the beginning that the public would share in the use of the building. The drill hall was intended to double as an auditorium to serve long-felt community needs for convention and meeting space.

The Armory was built for Company A, First Regiment of the Maryland National Guard. Company A traces its origins to the famous band of Frederick riflemen led by Michael Cresap, who joined the newly organized First Battalion of Infantry and saw action in subsequent border disputes and both world wars. The Armory was originally constructed to house one regimental headquarters and one other company sized element. Over the years it has housed medical, maintenance and other infantry companies. Since 1968, however, Company A has been the sole occupant. Over 16,000 men have passed through the Armory during their service in the Guard.

Like most of the armories in the State, the Frederick facility suffers from lack of vehicle storage space. Therefore, it must store most of its vehicles at Fort Detrick, several miles away.

Company A is in the process of vacating the Frederick Armory in order to occupy the new armory on I-70 outside Hagerstown. The Maryland Department of State Planning is currently studying possibilities for re-use of the building. A proposed municipal lease agreement would give the building to the city at a cost of \$1 per year for use as a recreation center. The location of the Armory on the edge of Baker Park and adjacent to a playground and band shell make such an alternative use both logical and feasible. The building was recently reassessed in excess of \$300,000 making it more likely that the State will offer it for sale at auction. The building is already in de-facto recreational use in that the gymnasium is extensively used by the YMCA and visitors to the adjacent park make use of soda machines and toilet facilities inside the building.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Armory is a two story, detached brick building, seven bays wide and approximately twenty-three short bays in depth using yellow sand-colored brick on the front, north side, and newer, rear entrance facades with red brick on the south side, all in common bond. The front facade and the first five bays of the sides are capped by battlemented parapets accented by three story, octagonal-shaped battlemented towers rising on either side of the central entrance. This wide, segmentally arched entrance is now approached by a ramp for vehicles and contains heavy double doors of wood panels with small panes of glass. A narrow passageway between the towers crosses above this entrance emblazoned with a placque proclaiming Maryland Guard and shields bearing the arms of the U.S. and of Maryland. Tall flagpoles rise from each tower bearing the U.S. and Maryland flags.

The first two stories of the towers are lighted by narrow, 1/1 windows with flat cement lintels and narrow slits for arrows pierce these walls above. A triple window lies above the entrance and the front end bays are lighted by regular 2/2 windows, all with two row brick segmental arches.

The 2/2 windows in the center sections of the sidewalls are grouped in pairs being recessed between brick piers and arched segmentally with marble keystones, forming drip moulds above these windows.

A newer, rear entrance section extends three bays in depth and resembles the front entrance with battlemented towers and parapets. The center drill shed section is surmounted by a segmentally arched roof and the building sets on a high foundation and basement.
