Description of Property and Justification: *(Please attach map and photo)*

Physical Description

The William J. Weir House is located on the north side of Avilton-Lonaconing Road about one third of a mile east of the intersection of Avilton Lonaconing Road and Swamp Road. The property consists of a house, tenant house, and small tool shed. There is also one collapsed unidentifiable outbuilding on the property.

Main Dwelling (Circa 1880)

The Weir House was built with a T-plan that has been heavily modified with single-story shed additions on all sides. The bulk of the frame house sits atop a stone foundation, while several of the additions are supported by concrete block foundations. The side-gabled structure also has a gable in the back of the "T" while all additions are covered by shed roofs. The main body of the house and the northwest and northeast additions are all covered with metal roofs. One quarter of the porch still stands, and is covered with asphalt shingles. A yellow-brick chimney protrudes through the side-gabled roof in the center of the house. Original lapped wood siding is visible in the lower right of the primary façade, however the majority of the house is covered with simulated brick asphalt siding. The southwest and northeast additions are both covered with asbestos siding. Windows throughout the house are of wood construction with a two-over-two pane arrangement. Overall the house is highly altered from its original form and many of

the original materials have been covered up or lost.

Tenant House, c. 1920

The tenant house associated with the Weir House is located approximately 200 feet southeast of the main house, also on Avilton-Lonaconing Road. The tenant house is a frame structure sitting on a cut-stone foundation. The house has a front gable and is covered with a corrugated metal roof. The enclosed front porch is covered with a hipped roof and a standing-seam metal roof. A small addition on the southeast side of the house is covered with a shed roof with corrugated metal roofing. White-glazed bricks were used as piers for the front porch and were also used for the chimney located along the gable line in the center of the house. All of the windows in the house appear to be made of wood, with wood surrounds. They are in nine-over-nine configuration on the enclosed front porch, one-over-one on most of the rest of the structure, and a few stationary windows located in the sides of the enclosed front porch and in the southeast addition. A vertical board door leads to the basement. All siding on the building, other than the southeast addition, is lapped wood siding. Covering the addition is corrugated and flat Plexiglas.

Tool Shed, c. 1900

The tool shed is located just northwest of the main house. It is a gable-roofed structure with board-and-batten siding. Tar-paper covers the roof and a plank door allows entrance on the southwest side.

History and Significance

The first Europeans began to arrive in the area around Avilton, Maryland in the mid-eighteenth century. There is little record of those who settled in the area first, as they did not file patents or commission surveys, but built cabins and cleared small portions of land. However, after the Revolutionary War development in the area greatly expanded. The forests that covered the mountains were slowly but surely cleared. Pine forests largely made up the land between Savage and Negro Mountains, with a few other varieties like spruce and hemlock intermixed (Brown 1896:54). These large wood-covered miles attracted many hunters to the area, including Meshach Browning, who wrote a book about the many years he spent living as a pioneer in the area around Avilton and directly west. Hunters like Browning who populated the area used the National Road, which was constructed through the area in the early nineteenth century, to get their hides and meats back to eastern markets (Browning 1942:195). While the hunters settled early, it was not long before additional lots were readied for settlement. Many of the earliest lots in the area were surveyed for veterans of the Revolutionary War. Some of these lots went to men like Thomas Johnson, who eventually became Governor of Maryland. There were also land speculators who made their mark on the area, including men like Brooke Beall and William Deakins (Rowland 2009:39).

The earliest land records of the area typically consist of people with large tracts of land selling those tracts to other speculators. But, starting in the mid-1800s that began to change, as smaller portions of land were sold off, and more and more farms were raised in the valleys between the mountains. As land was freshly cleared, many farmers from east of the Appalachians began to plant tobacco. However, they learned quickly that the soil was made too poor by tobacco farming in this area (Brown 1896:300). The settlement that would later become Avilton was originally known as "The McKenzie Settlement" for the many numbers of Scottish immigrants, particularly McKenzies, who settled there. The early farmers of this area grew primarily wheat, rye, oats and potatoes. A partial listing of the founding families of this area was included in Garrett County: A History of Maryland's Tableland and includes: Garlitz, Blocher, Wilhelm, Broadwater, Miller, Crowe and Merrill among others. By 1885, the area was known as Avilton, and a post office was opened under that name (Schlosnagle 1978:65).

In the second half of the nineteenth century, railroads made their way through Garrett County, connecting the area like never before. As the railroads arrived, the many pine forests that surrounded area farms were looked at with a new sense of their value. While they had been used as a source of building materials for years, the forests were now logged and the timber was shipped to

larger markets on the railroad. On Savage Mountain, it was the Juniata Lumber Company that took advantage of the fine timber of the area (Brown 1896:264,275). Increasingly, the agricultural area was dotted throughout by people who worked in the industry. As Jacob Brown described the area "she grew from a county of crude backwoods settlements and small self-sufficient farms to a county of coal towns, timber towns, resort towns, trade towns, and increasingly fertile fields and meadows (Brown 1896:304)." While the area was still largely rural, times were slowly changing.

By the first half of the twentieth century, more and more people were working both on their farms and in various industries. By the 1940 Census, many household heads were listed as working in mining or timbering, while it is also indicated that many continued to pursue agriculture (Ancestry.com). While they produced goods for local markets, the demands of an increasingly connected society drew more and more residents off their farms. The effects of the great depression were also seen in the 1940 Census of the area, with many people listed as road builders or general laborers who were employed in emergency government work (Ancestry.com). After World War II, some farms began to not be used for agriculture. This has led to the decline of some of the properties, and the destruction of others. Many families, descendants of the original settlers at McKenzie Settlement, continue to use the fields around Avilton to raise cows and some grains, continuing some of the traditions that were started so many years ago.

The William J. Weir House is located on the east side of Avilton-Lonaconing Road, northwest of Lonaconing and southeast of Avilton. The area is predominantly densely wooded and rural. On the west side of Avilton-Lonaconing Road is an extant agricultural field. The property consists of a main dwelling, a tenant house southeast of the main dwelling along Avilton-Lonaconing Road, a barn on the west side of Avilton-Lonaconing Road, and a shed and ruins of outbuildings immediately northwest of the main dwelling.

On May 26, 1871, James Weir purchased a large tract of land northeast of Lonaconing from Ezra Koontz, and his wife Highley Koontz, for \$2,150.00 (Allegany County Deed Book 33:559). This deed states that the parcel was located contiguous to the Lonaconing Iron Works. It is likely that James Weir constructed the circa-1880 dwelling and early outbuildings located on the William J. Weir House property. According to his obituary, James Weir was born March 15th, 1840 in Lanarkshire, Scotland. After being orphaned at the age of 10, he and his brother William traveled to Maryland, where he worked in the coal mines. James Weir enlisted as a corporal in Company D of the 2nd Regiment of the Potomac Home Brigade of the Maryland Infantry during the Civil War. By the time he was mustered out, he was a sergeant (National Park Service 2007). After the war, James Weir moved his family to the community of Lonaconing, where he lived in town before buying a large tract of farmland (Allegany County Deed Book 33:559). According to the County Tax Records for Allegany County in 1872, the value of James Weir's real estate was \$2000 (Allegany County Tax Records 1872). The 1880 United States Census lists James Weir as a 38-year-old farmer living with his wife 28-year-old wife, Ann (United States Census Bureau 1880). James and Ann had six children living with them in the house including three sons: Hugh, 13 years old and working as a farm laborer; James, 11; David, 9; and three daughters: Rebecca, 5; Rhoda, 3; and Evaline, 1.

The 1900 United States Census lists James Weir as a 60-year old farmer and head of a household of seven, including his wife, Annie, and five children: Rhoda, 23; Evelyne, 20; Agnes, 18; Thomas, 16; and Walter H., 12 (United States Census Bureau 1900). All three of James's daughters worked outside of the home as servants, while both of his sons attended school. James Weir died on February 13, 1908 (Lonaconing Star 15 February 1908; Find a Grave 2011). On May 1, 1908, Ann Weir and her two youngest sons Thomas and William H. conveyed 14.7 acres of James Weir's original property to her eldest son, Hugh Weir, and his wife Celia (Garrett County Deed Book 56:573). The 1910 United States Federal Census indicates that Ann Weir and her younger children lived nearby, and it is possible that she continued to reside on the property, either in the primary dwelling or in another residence on the property (United States Census Bureau 1910).

According to the 1900 United States Federal Census, Hugh Weir was once employed as a coal miner (United States Census Bureau

Date

1900). After purchasing the tract of land from his mother, however, Hugh Weir resided and farmed on the property with his wife, Celia, his daughter Ruby, and his son, William J. (United States Census Bureau 1910). By 1920, the couple has three children residing with them in the dwelling, and by 1930, Hugh and Celia Weir are living alone (United States Census Bureau 1920; 1930). Hugh Weir died on November 8, 1949 (Find a Grave 2012). In 1950, Celia conveyed the 14.7-acre property to her son William J. Weir and his wife Anna (Garrett County Deed Book 56:573). William, born in 1903, had been listed in the 1940 United States Federal Census as a laborer in "government work" and head of a household of four, including Anna Weir and their two sons William D, age 12, and Allan, age 1 (United States Census Bureau 1940). He had also worked as a mail carrier (Find a Grave 2009) William J. Weir died in April 1967 (Social Security Administration 2011). Anna F. Weir conveyed the property to William Dale Weir for \$10.00 on August 3, 1983 (Garrett County Deed Book 426:518). William Dale Weir owned the property until July 25, 1996, when he conveyed the 14.7 acres to Roy D. Weir and Brianne M. Weir as joint tenants for the consideration of "love and affection" and reserving the right of survivorship (Garrett County Deeds 685:827). Roy and Brianne Weir are the current owners of the property.

NRHP Evaluation

No information could be located that connects the William J. Weir House with significant events or themes in local, state, or national history. While the property was at one time associated with agricultural practices, it no longer functions agriculturally and is currently vacant. In addition, the extant structures, including the main dwelling, tenant house, and tool shed, do not present a cohesive reflection of any associated agricultural practices, largely due to the absence of contemporary agricultural structures and/or outbuildings. Therefore, this resource is recommended not eligible for NRHP listing under Criterion A. The property is associated with the Weir family, including Civil War veteran James Weir, Hugh Weir, and William J. Weir, for whom the property is named. Local historical and genealogical sources provide no further information related to the Weir family or any other individuals associated with the property, and there is no evidence that any individuals associated with the property were significant in local, state, or national history. As such, this resource is recommended not eligible for NRHP listing under Criterion B. The William J. Weir House stands as a common and heavily altered example of rural vernacular architecture in western Maryland. The modern additions to the dwelling and application of asphalt siding especially diminish the historical character and integrity of the resource, and it no longer maintains integrity of design, materials, workmanship, feeling, or association. The property also currently stands vacant and deteriorated. Therefore, the resource is recommended not eligible for NRHP listing under Criterion C. Eligibility under Criterion D cannot be determined as this resource has not undergone archaeological testing.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The William J. Wier House is located on the northeast side of Aviliton-Lonaconing Road approximately .5 mile southeast of Swamp Road. It is situated on the edge of the road with its facade pointing southwest.

The house is a frame, two story, gable-roofed building on a coursed, roughly squared stone foundation. Its basic configuration is a T-plan with a three bay by one bay main block and a one bay by one bay rear extension. The facade has a symmetrical, three bay, center door arrangement with its second floor, center bay unfenestrated. A porch extends the full length of the facade. One story, shed-roofed additions obscure the northwest and southeast sides of the rear extension and the northwest endwall.

Two over two sash windows light the building on all elevations. The facade door has a window on its upper half with a picture of Niagara Falls in frosted glass. This pane is framed by an egg and dart molding above and a dentil molding below. Five panels with a sunburst motif occupy the lower half of the door.

Red, brick-patterned asphalt siding covers the exterior walls of the house and tarpaper covers the roof. A yellow brick stove chimney is positioned at the center of the ridgeline. The porch has a concrete block foundation and four turned posts with jigsaw brackets supporting its shed roof.

Northwest of the house is a one story, frame, gable-roofed building. Its original use is unknown. The structure is one bay by three bays with a gable end facade (SE elevation). It rests on a dry laid foundation of uncoursed, roughly squared stone and has German siding on the exterior walls. Six over six sash windows with pedimented window heads light the northeast elevation. Two large, batten, double doors open on the southwest elevation. The facade door is four-panel with a white porcelain knob and a pedimented lintel.

Four board and batten sheds are located northwest of the house.

STATEMENT OF SIGNIFICANCE

This house is an example of a common western Maryland type. Houses of this general configuration, based on the T-plan with shed additions on the side elevations, were constructed in Garrett County from the late nineteenth through the early twentieth centuries.
