

HA-1054

Bennett-Mitchell House
3006 Snake Lane
Churchville, Maryland 21028

The Bennett-Mitchell house stands on land once owned by the Harford Furnace. It was built in the 1880's by Ernest Bennett, who modeled his house on the Bechtold House (HA-1289) across the lane, with only slight changes. The front (north) portion is the typical 5 bays wide, 1 room deep house so often found in Harford County.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

Built in the 1880's to copy Frederick Bechtold's house (HA) on the north side of Snake Lane, this two-story, gable-roofed frame house is T-shaped and set on a stone foundation. There are brick chimneys with corbelled caps in each end and most windows have 6/6 sash. Five bays wide and one room deep, the main or north section has a three-bay, shed-roofed front porch with square posts. The principal facade has a central entrance flanked by two windows on both sides, with three windows in the second story. The one light over two panel door has a three light transom. The west end is blank except for two gable windows; the east end is similar, with the addition of one window in each story.

The 1/2-story stem of the T-or south section-is two bays long and one room wide, with a one-story shed-roofed adjunct on the east. Centered in the south side of the north section it is flanked by windows in that side.

Both sides of the south section have two 3/3 sash windows in the second story. The west side has a door in the first story north bay flanked by a window on the south. The south end is blank.

Northeast of the house is a two-story, gable-roofed stone outbuilding.

BUILDER/ARCHITECT

STATEMENT OF SIGNIFICANCE

Built by Ernest Bonnett, this house was copied from the house built by Frederick Bechtold (the Bechtold-Lohr house) across Snake Lane. Comparison of the two indicates the changes that were made later on the Bechtold house.

This house is slightly smaller than its prototype; otherwise, however, the basic format is the same. The el-1½ stories and two bays long with a porch on one side and an interior end chimney-is probably the same shape as the Bechtold's was originally. (It is now two full stories, three bays long, with a central chimney, which was probably in the end of the original el.) Probably constructed in the 1880's, Ernest Bonnett first shared,¹ and then acquired² this parcel from Adam Bechtold. In 1882, Bechtold had purchased 124 acres in a sale of Clement Dietrich's property consisting of parts of two tracts, "Montrial" and "Abbott's Forest."³ The former had belonged to Edward Griffith, the latter to Elizabeth Webster.

The land was part of Harford Furnace, owned first by Patterson & Green and subsequently by Clement Dietrich.

Background Information on Mitchell properties in Snake Lane vicinity

NA-1054

On October 4, 1779; Amos Cord conveyed 150 acres of "Stony Ridge Enlargement" to John Mitchell for the sum of 500 pounds.¹ In a description of the boundaries of Mitchell's land, this property was referred to as part of "Stony Ridge" and "Paca's Enlargement".² Originally, this land had belonged to John Paca, who in 1775 conveyed it to John Blackburn,³ Blackburn then sold it to Thomas Perigrine Farsby who exchanged it with Amos Cord in 1776.⁴

Also, on December 17, 1783, John Stevenson sold 243 acres of "Stony Ridge" to John Mitchell for 486 pounds.⁵ And in 1800, Captain James Philips of Baltimore City conveyed 100 acres of Stony Ridge, which he had inherited from his father, to John Mitchell.⁶ This parcel had been confiscated from James Christie after the Revolution and sold by commissioners appointed to preserve confiscated British property to James Philips on October 1, 1782 for 100 pounds.

John Mitchell (b. 1737, d. 1801), has been described as "a respected and thrifty millwright." He married Mary Tidball in 1765 and had eight children. The property we are concerned with here-i.e. on the north side of Snake Lane-presumably passed to John Mitchell's son, Elijah, and then to Elijah's three sons William, Robert, and Elisha.⁷

It is said that in 1831 Elisha Mitchell possessed the land on which the Bechtold-Lohr house and the Mitchell-Lauterbach (HA-1288) house now stand.⁸ William's house burned. Robert owned the property where the Winfield Mitchell house (HA-1286), the Mitchell Tenant house #1, the Markline house, and the Mitchell-Magness house are now situated. Robert probably lived in the house now owned by William Craig, located behind the Mitchell-Magness house. However, that structure has been altered extensively, and the house as Robert Mitchell would have known it is unrecognizable.

Robert Mitchell married Averilla Hawkins and together they had seven children: Robert Louis, Mary Jane, Samuel, George, John Thomas, Catherine, and Margaret. In the last quarter of the 19th century, Robert Louis Mitchell built the Winfield Mitchell house⁹, Samuel built the Markline house (HA-1283)¹⁰ and eventually occupied his father's house; John Thomas built the Mitchell Tenant house #1,¹¹ and Margaret lived in the Mitchell-Magness house.

John Thomas Mitchell had two sons, George and Alonzo. George's house burned; Alonzo lived in what is called the Mitchell tenant house #1 and inherited Robert Louis Mitchell's house. John Winfield Mitchell, son of George Mitchell, then inherited the property of Alonzo Mitchell who had no children of his own.¹²

Thus, most of the Mitchell houses on Snake Lane were built during the last quarter of the 19th century by the children of Robert Mitchell.

Although unimpressive singly, this cluster of houses in the Snake Lane vicinity represents a good cross-section of Harford County's small farmhouses built in the second half of the 19th century. Each is ordinary and, thus, together they represent the surprising variety of vernacular forms built at that time. None seems distinctive, but, on closer examination, no two are the same (although at least one house was a deliberate imitation of its neighbor).

There are certain common denominators among these buildings. They are all two story frame structures with gable roofs. Most are L or T shaped, with 6/6 sash windows and brick end chimneys (for stoves). They are of various construction: clapboard, shingle, board-and-batten, (However, most have been covered in asphalt shingles or aluminum siding, so the original materials are not apparent.) There is minimal exterior ornament: the shutters, gable returns, and carved porch brackets on the Winfield Mitchell house represent the height of fancy; the Wakeland-Gorrell house with its projecting vestibule and colored glass windows is an anomaly. Similarly, the interior plans are functional: one or two rooms in each story of the main section, one or two rooms in the el, with a staircase tucked in between. Or, if the staircase is in the center of the main section as in larger houses, it is not given undue prominence by being set apart in a hallway (again, except for the Wakeland-Gorrell house); it is against one wall of one of the rooms. Utilitarian, functional, with few conceits--these are the underlying themes of these houses.

Other motifs are subtler--the relationships between formal and informal elements, for instance. This dichotomy is represented in various ways: the symmetrical fenestration on the front facade versus the haphazard arrangement on the rear; the ambiguous relationship between the facade and the interior arrangement, wherein the former formalizes the latter. Perhaps the best way to discuss this cluster of seemingly non-descript buildings is to group them on this basis.

All houses have a front porch--less one for sitting than one to announce the entrance. It is the way visitors are introduced to the house and is often the one element that is decorated. The porches on these houses are of different shapes--their scale and ornament in direct proportion to the size and prosperity of the house: The George Jones house (HA-1053) is absolutely straightforward: three parts built side by side with an entrance in each. The formal entrance, in the west section, has a one bay wide, gable-roofed portico--and that is the only exterior element that could be considered extraneous. The Markline house and the Mitchell Tenant house #2 both having two parts, each two bays wide and two bays deep have undecorated shed-roofed porches spanning their front facades. The Markline house represents a slightly more formal arrangement than the other two--with its additions annexed to the rear, leaving the front facade symmetrical and singularly autonomous.

The Mitchell Tenant house #1, which is wider than the Markline house by one bay and has a central entrance, correspondingly has a more ornate porch with gable returns and collared posts. Likewise, instead of the stair being tucked between the front and rear sections as in the Markline house, the stair is in the center, against the east wall of the parlor.

The Winfield Mitchell house and the Mitchell-Magness house--both four bays wide, with entrances in the two center bays--illustrate well the formal-informal dichotomy that the other houses suggest. The symmetrical facades, the porches with carved brackets, collared or turned posts, and central flights of steps represent the public gestures; and the rear elevations, haphazardly arranged, are for residents' eyes only. The two entrances--one leading into the family parlor, the other into the formal part--manifest the duality.

The Bechtold-Lohr and Bonnett-Mitchell houses are both five bays wide--and the latter was copied deliberately from the former. The porch of the Bechtold-Lohr house with its

HA-1054

massive rock-faced concrete block piers, tapered columns, and hipped roof was constructed after the house was built but is appropriately-and symbolically-prepossessing for a house of this breadth. Its cousin, the Bonnett-Mitchell house, has a relatively scaled-down porch with square Doric posts covering the central three bays. Both houses have central entrances and central sets of porch steps-but no center hall on the interior. The formal symmetry of the exteriors bely the simply, functional interiors. Inside of both are two rooms, the room with the staircase (which is aligned with the entrance) larger than the other.

Finally-with the ultimate formal arrangement-the Gorrell house is three bays wide, with floor-length windows in the first story. Spanning the facade, the hipped-roofed porch with square posts shelters the projecting three-sided vestibule with a double-leafed door in the center, flanked by windows with colored glass borders. Inside, the house has a central hall plan. The principal facade of the Gorrell house has all three formal elements present in varying degrees in the other houses of this area: the extroverted porch, the inflected entrance, and relatively elaborate ornament.

DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

This frame house, asphalt shingles, covered clapboard is T shaped. 2 stories ^{on a stone cellar,} facing east 5 bays by 1 downstairs 3 by 1 upstairs, with a smaller-scale west wing 2 bays by 1. Pairs are moderately wide on both parts of the house but there is a strict absence of trim. A chimney rises to the peak inside each gable end wall from stove flues in the main house and kitchen wing. Windows throughout have 6 lights on 6 except upstairs in the wing, 3 on 3.

There is a ^{one-story} porch south of the wing and another sheltering the front door and a window on either side.

Tenant houses, slave quarters and large and small outbuildings characteristic of the mid-19th century remain in fair condition.

STATEMENT OF SIGNIFICANCE

The center-hall plan of this house is a survivor from earlier layouts but the ~~stone~~ room by room heating system is one of several indications of mid-19th century construction.

Still a working farm, one of a diminishing number of family farms.
