Harford Furnace Charcoal Shed/David Smith House
Creswell Road
Bel Air, Maryland 21014

This one-story, gable-roofed stone structure measuring 70 X 22 feet was built as a charcoal shed for the Harford Furnace ironworks. It probably dates from the final ironworks owned and run by Clement Dietrich from 1867 until 1876. His holdings comprised 5873 acres as well as a water and steam power charcoal iron furnace, ore and charcoal kilns, a pyroligneous acid chemical works, a carbonization building, a mythelene building, a building for the manufacture of acetic acid and acetates, a "flouring mill", a steam saw mill, and a variety of dwellings and community service buildings for the workers. The charcoal shed and some ruins on James Run are all that remain of this once-huge industrial complex.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

This structure, said to have been the charcoal shed, ^{for the factory furnace} is located on Creswell Road, just south of the intersection with Goat Hill Road.

This one-story, stone building measuring 70 x 22 feet was converted into a residence 30 years ago. With a recent addition on the south, the building is of coursed stone with a slate gable roof, a bargeboard with a wave pattern, and an interior brick chimney east of center. All woodwork has been replaced (mostly with duplicates of the original elements) as have the doors and windows (now mostly with 6/1 sash). Original windows-in the gables, at least-had 6/6 sash, and the doors were of vertical boards braced and battened; the original bargeboard was of a wave design similar to the present one.

In addition, several window openings are new: where there were single gable windows are now paired windows; in the east end, the original door was made into a window and a new door was opened south of it; in the north side where apparently there was a central entrance flanked by a window on each side are now two windows east of the center entrance and two windows and three lunettes to the west. (The latter fills in the space that held the original entrance.)

STATEMENT OF SIGNIFICANCE

This house was probably a charcoal shed for the Harford Furnace ironworks.

The Harford Furnace ironworks that closed down in 1876 was the last in a series of furnaces on Bush River. The first-Bush River Ironworks-was among the fifteen or twenty furnaces that were established between 1733 and 1767 under the Maryland General Assembly Acts allowing for land acquisition by writ ad quod damnum. The date of precept for the Bush River Ironworks was February 27, 1746; the date of patent was 1750: 70 acres on Bush River were granted to Isaac Webster, John Hall, and Jacob Giles. The exact location of the Bush River Ironworks is unknown. Described as being part of the "Come By Chance" and "Whitaker's Enlargement", it is thought to have been close to the town of Bush, since the original patent was described as being near the Quaker meeting house.

By the time the ironworks (comprising a furnace, grist mill, saw mill, dwellings, oles, smith shops and dam) were sold in 1776, John Bond, John Webster, and James Webster had joined the partnership. The reason for dissolution is undocumented, but one source suggests that the labor supply was erratic, consisting primarily of convicts transported or indented here (i.e. redemptioners whose services were sold to repay their passage expenses).

The second furnace in this area was established by three Pennsylvanians: John Kirk, Samuel Irwin, and John Withers. They agreed to raise a capital stock of \$18,000, each partner contributing a third. Land they acquired included 500 acres of "Montreal", 300 acres of "Mile's Forest", 500 acres of "Abbotts Forest", and 120 acres of "Creeds" as well as parts of "Jones' Addition" and "Hathaway's Hazard". They also acquired 205 acres of "Rangers Lodge" and "Nova Scotia" from St. George's Vestry, making a total of 1947 acres.

In 1831 they sold out to Joseph and Edward Patterson and Richard Green who, in 1833, reorganized as the Harford Furnace Company.

They added to the land holdings with parts of "Daniel's Lott", "Come By Chance", "Bond's Adventure", and "Strawberry Hill" purchased at a public sale held by Albert Constable, Trustee. They also purchased 287 acres of "Acker's Hope" and "HA HA Indeed" from Martha and Sophia Hall, 166 acres of "Montreal" and "Stony Ridge" from William Holland Divers, and 326 acres of "Friendship" and "Littleworth" from Henry D. Farnandis, Trustee.

The furnace was disassembled in 1839 and in 1845 was rebuilt as a steam and water furnace, 33 feet high, and 7½ feet wide at the boshes. By 1857, its main product was car-wheel metal and production had reached 1421 tons annually.

In 1861 ownership changed hands again. At that time, William F. Pannell (listed as postmaster and storekeeper on the 1858 Jennings and Herrick Map) purchased the furnace. During his proprietorship, the furnace was supplied by two ore banks: the Walsh ore bank-½ mile northeast of Sewell, with an opening 100 yards wide and 100-200 yards deep; and the S all ore bank-¼ mile north of Sewell, with an opening 300 feet wide and 60 feet deep. addition, Davies suggests that ore banks near Little Gunpowder Falls around Joppa were leased on a royalty basis. Transportation of raw materials and the finished products was by the B&O and the Baltimore, Wilmington and Philadelphia railroads.

In 1867, William Pannell sold his 5056 acre holdings to Clement Dietrich, who added a chemical works to the furnace complex. By the time his mortgage was foreclosed and his property ordered to be sold in 1876, Harford Furnace comprised 5873 acres. According to a newspaper advertisement, the 5056 acre parcel sold to Dietrich by Pannell had on it: one charcoal iron furnace, water and steam power, of fifty tons capacity per week, the ore and charcoal kilns; a large chemical works for the manufacture of such products as pyroligneous acid, wood alcohol, acetic acid, sugar of lead, and acetates, consisting in part of: a carbonization building, 100 x 65 feet, with 24 cylinders and 8 furnaces, having a capacity of 600 bushels of charcoal and 1600 gallons of pyroligneous acid per day; a mythelene building, 60 x 20 feet, for manufacturing wood alcohol, with a 1000 gallons per month capacity; a building, 200 x 65 feet, for manufacturing acetic acid and acetates, etc., with stills, evaporators, engines, etc., with a 60 x 30 foot warehouse attached to it to store acids; also a "flouring mill" with water power, and a steam sawmill, 65 x 50 feet, with circular and upright saws. The parcel also included what is described as a stone mansion house "with the usual outbuildings", a stone dwelling, store house, warehouse and offices; three comfortable dwelling houses; 35 dwellings for employees, workmen, etc.; wheelwright, blacksmith, copper-smith, cooper and harness shops; barns, stables, barracks, "and other necessary outbuildings"; 400 acres in cultivation around the mansion house, with wood cuttings, young timber, and iron ore banks.

Two other parcels were included in Clement Dietrich's Harford Furnace holdings: one known as the Long Bar Farm, consisting of 510 acres sold to Dietrich by Josiah Lee in 1872. On it were a dwelling house, new corn and wagon house, new stables and other outbuildings, a 50 acre young peach orchard, a 1 acre pear orchard, iron ore banks and 4 new dwellings "for the use of the hands employed thereat". The other 298 acre parcel, described as "unimproved", lay near Perryman. Fifty acres of wheat, 62 mules, 8 horses, 5 yoke of oxen, cows, and farm implements were also included in the package.

The demise of the Harford Furnace in 1876 paralleled concurrent developments in Maryland's iron industry. Between 1865 and 1885, 19 furnaces in Maryland were abandoned: the industry's antiquated and economically irrational methods could not compete with the rest of the country. Like Harford Furnace, most Maryland iron furnaces made their own charcoal and mined their own iron ore--they were relatively small hand-scale operations carried on in costly ways, run by a furnace boss who knew everything. Between 1860 and 1880, the industry became a highly-specialized, intricately-financed, automated production complex, and steel replaced iron as the main product.

had its stonework relaid. A Massive frame lintel marks the original large opening which is said to have been the location of the barn door. That bay now houses a kitchen door and three small kitchen windows.

In 1835 the Glebe was purchased by the owners of Harford Furnace⁴ who used it to house factory workers.

There is a one-story, gable-roofed brick spring-milk house about 100 yards downhill southeast of the house. Like the main section it was standing in 1798 and is cited in the tax list, "milk house 11' by 10'." There is also a modern outbuilding east of the house constructed by the Glebe's present owners for recreational purposes, it does not contribute to the historic significance of the property.

CHARCOAL HOUSE, 2606 Creswell Road; C. 1845 (HA-1247)

This one-story, stone structure measures 70' by 22'. Maryland mill scholar John McGrain, among other sources, has determined that the building was the charcoal shed for the "steam and water cold-blast charcoal furnace" built here in 1845.⁵ It is located on Creswell Road, just south of Goat Hill Road. Converted to a residence c. 1950, the building is of coursed stone with a slate gable roof and an interior brick chimney. The roof's bargeboards are sawn into a distinctive wavy pattern. Other woodwork, doors and window frames, dates to the 1950 adaptive reuse but, when the shed was converted into domestic use, great care was taken to duplicate the original design. Some window openings date to 1950; in the east end, the original door was made into a window and a new door was opened south of it. The three-bay north side originally had a center door and two windows but it now has a center door with two windows to the east and two to the west.
