

## SUMMARY

HA-1594  
St. Clair Farm  
4302 St. Clair Bridge Road  
Jarrettsville, Maryland 21084

This large farm complex has a wide variety of agricultural buildings from different periods, and a large "eclectic" style dwelling house. One can learn much about the evolution of farming processes from an examination of this site.

## DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The St. Clair Farm is a splendid example of a 19th-20th century farm complex which has undergone an evolutionary transition on farming methods and agricultural building needs change. This description is keyed to the site plan, which gives the approximate position of each of the 16 structures in the complex.

The farmhouse faces South West is a 2 story frame gable roof structure with a T - Plan. It rests on a rubble stone foundation, has 1/1 windows, and is clad in weatherborads. There are two brick chimneys with corbelled caps, centrally located and projecting through the ridge. It is best described as being eclectic in style; the house serves as a unit onto which various 19th century architectural elements have been grafted. The house is approximately 3 bays wide with 2 story swells on the northwest and south-west (The ends of the T). Notable features of the main elevation are a projecting cross gabled center pavilion and a 1 story shed roof porch with turned wooden posts and spindle decorative elements supported by decorative brackets. In the 3rd story of the cross gable is a triple round arched window with the center window articulated by colored glass panes. The gabled peak is finished with cove butt and half circle butt shingles. At the peak, there are delicately sawn wooden vergeboards. Below the Palladian window is a pair of 1/1 windows with colored glass panes articulating their perimeters.

The roof line extends over the cut away portion of the swells at the northwest and southeast ends. Large wooden brackets decorate the underside of this overhang. In gable ends above the swells, there are round arched Palladian windows and half circle butt shingles, as well as vergeboards similar to the one on the front of the house.

On the northwest and southeast sides there are shed roof porches, flanking the stem of the T, each with turned columns and decorative wooden spindles. On the southeast side is an oculus and an entrance to the basement. This was more of a work porch as evidenced by tables. The northwest was the informal entrance to the house, via the kitchen.

The interior revealed a number of elaborated wooden mantelpieces with sawn wooden spindles and decorative ceramic tiles surrounding the openings. The windows in the front parlors (in the swells) had interior triple sliding louvered blinds, to regulate sunlight and fresh air.

St. Clair Rutledge, the owner of the property when it was being surveyed, reported that this house was built in 1906 (?) and it replaced an earlier house that stood to the northwest of the present barn (#15). The farm and house were electrified sometime between 1932-1935.

### Outbuildings

#### Outbuilding #1

Poultry - Brood house

A 12'1 X 15'6 shed roof frame building with 5" tongue and groove siding fixed with wire nails (wall heights - Southwest-7'10" northwest 5'9")

**STATEMENT OF SIGNIFICANCE**

The present St. Clair Farm complex contains three generations of domestic farm buildings on the same site. Consequently, one can learn a great deal about the evolution of Harford County from the mid 19th century to the present from them. The log springhouse remains from the first generation of structures, which also included a log barn. The newest buildings include a concrete block equipment shed and a gambrel roof dairy barn constructed in 1950 from stock plans. The transition from large to even larger scale farming can be seen in this complex as well as the addition of structures designed specifically to shelter gasoline driven equipment.

The dwelling house, a second generation structure, is a magnificent rural interpretation of the eclectic, blending elements of the Gothic Revival and Queen Anne styles to produce a very impressive residence.

Unlike many farms which are being sold in Harford County and subdivided for residential units the St. Clair Farm has been recently sold to another farmer, who will carry on the tradition of dairy farming. As such it is a "living" document of an agrarian community which is over two centuries old.

HA-1594

cc. Clair Farm  
4302 St. Clair Bridge Road  
Jarrettsville, Maryland 21084

Outbuilding #2Poultry-brood house

A 10' X 11'4" frame shed roof structure with vertical board siding (13-15" wide) affixed with wire nails (wall heights SW 7'9", NW 5'1").

Outbuilding #3Poultry (laying house)

A modern structure 24' X 100' with a shed roof, constructed in 2 periods (wall heights SW 9'5" - NW 5'6")

Outbuilding #4Storage-Original function unknown

A frame shed roof structure on stone piers measuring 8'1" X 14'6" with tongue and groove siding. (Wall heights SW 7'8", NW 6'1")

Outbuilding #5Meathouse

A gable roof frame structure 9'2" square with tongue and groove siding (Walls 7' high, 11' to ridge)

Outbuilding #6Woodshed

A gable roof frame structure 15'2" X 10'2" with 5 1/2" tongue and groove siding. (Walls 6'10")

Outbuilding #7Equipment Shed

Modern construction, with concrete block piers, 30'3" X 60'3", 3 bays wide. It contained 5 tractors, 1 general purpose truck, 2 wagons and hay baler.

Outbuilding #8Poultry shed with attached  
Equipment shed

Poultry section is 14'2" X 24' on a stone foundation. A 12' shed to the NW contained a 1900's vintage Ford pick up truck.

Outbuilding #9Combination crib and wagon shed

A most intriguing structure, approximately 38' X 24", with a gable end roof running N-S. At the SW corner, the walls were 12'6" high. This is a hewn post and beam structure with circular sawn braces pinned at the posts. These are log joists and treepole rafters mitred at the ridge. The loft space contained 5 bins for a granary.

Siding is of 13" vertical boards attached with cut and wire nails. The west wall has vents - boards sawn 2" wide with a 1" air space. The northwest vent appears to have been attached with wrought nails. At the southwest is a board and batten personnel door constructed with wrought nails. The wagon shed to the east has a slate roof, and contained 2 horse drawn sleighs at the time of examination. Its interior walls has boards 1" thick and up to 24" wide. These walls were white washed.

NA-1594  
 St. Clair Farm  
 4302 St. Clair Bridge Road  
 Jarrettsville, Maryland 21084

Outbuilding #10Springhouse

This structure has two distinct periods of construction. The first is a log section, 13'2" X 10'6" on a rubble stone foundation with a slate covered gable roof. The V-notched logs are 10"-11" wide and 6" thick, with fieldstone and mortar chinking in between them. The entire structure had been whitewashed. The gable ends are covered with clapboards with 5" to the weather. The structure is built into the side of a hill such that the height of the south elevation is 9'6" and the north elevations 5'9". There is an opening in the east wall 22" X 14" with diamond shape wooden bars. The rafters were a mixture of sawn and hewn material 3" X 4" notched at the plate.

The second section is located off the southwest corner and is an attached frame addition 11'X6". It is of modern materials attached with wire nails, and contains a brick chimney. The log section had numerous farm related artifacts in the loft space over the main room, including a corn sheller, crocks, and a sausage stuffer.

Outbuilding #11Corn Crib

This structure measures 8'6" X 30' 3" and sits on 5 sets of rubble stone piers. The frame is of post and beam construction with pegs. The rafters are mitred at the peak. The height of the walls (from sill to plate) is 10'2". It has a gable end roof.

Outbuilding #12Wagon Shed

This structure measures 20'6" X 10'6" and rests on 6 posts driven in the ground. It is constructed of modern circular sawn wood, and has a gable end roof. The height of the eaves is 6' measured from the ground.

Outbuilding #13Corn Crib

This structure is 16' long, and has sloping sides, tapered upward from the bottom (5' wide) to the top (7'6" at the eaves). The sides are of 4" slats set 1" apart. The slats and frame are all circular sawn but the frame has mortise and tenon joints. The rafters are mitred without a ridgeboard, and there are 3 tie beams running the length of the structure attached with 20 penny wire nails. The crib sits on concrete piers.

Outbuilding #14Hay House

This gable roof structure measures 24'6" X 30'6" overall and has walls 16' high from the top of the plate to the ground. It rests upon cedar posts driven into the ground, and has vertical siding attached with cut nails. The interior revealed hewn posts and circular sawn rails, plates and rafters. Wire nails affix the rafters to the plates. The east half of both the north and south sides are doors, 14'X11'6" mounted on roller wheel tracks. Cut rails were observed in the sliding door. There is a loading door in the east gable end. This building has elements of a transitional approach to construction, incorporation, circular sawn materials and wire nails with the older post in ground - braced frame method.

NA-1594

. Clair Farm  
4302 St. Clair Bridge Road  
Jarrettsville, Maryland 21084

Outbuilding #15Main Barn Complex

The oldest section of this complex is a post and beam bank barn, 56'6" X 36', extended to the south by a series of sheds measuring 49' X 56'6" and enlarged by a modern (1950) gambrel roof barn to the north measuring 36' X 80'8".

The bank barn is a 3 bay gable rod structure with a shed roof granary to the west beginning at the bier (lowest level), there is a space for cattle defined by whitewashed rubblestone walls. At the extreme west end, there are alterations to the stone work. Extreme curvature at the south end was observed, where the stone walls terminate. Puncheons support the main floor.

At drive level, there is a trapdoor leading to the bier, probably cut through after the barn was built. Also in this area, large (11") butt joined horizontally laid boards define a grain storage area. A floorboard 21" wide was observed. At the south end of the drive, longitudinal bents forming an H pattern, that support puncheons and floorboards forming an open loft.

The roof is supported by treepole common rafters, mitred at the ridge and supported by curlics. Some of the treepoles have been replaced by vertically sawn pieces. The rafters and plates are notched to accommodate one another, and there is a cut spike holding each rafter in place. Cut nails were observed in the west gable end bracing as well. The granary on the west side is probably an addition. It has vertically sawn rafters tied to the treepole rafters with wire nails.

Outbuilding #16Old House Site

There is nothing remaining here and even the precise location within the complex is not certain. However, St. Clair Rutledge recalled that there was an earlier house on the farm that was demolished in his lifetime.

Also examined briefly was a tenant house built by St. Clair Rutledge's grandfather, which stands just west of the main farm group. It is a 2 story - gable roof structure, 26' 6" X 14' 1", resting on a rubble stone foundation. It is 3 bays wide X 1 bay deep and is covered with clapboards. Windows are 6/6. There is an interior end flue in the west end, and a later shed addition is attached at the west. The interiors revealed a 1 room down, 2 rooms up plan, with an enclosed staircase. All materials are circular sawn, attached with wire nails.

We were indeed fortunate to stop and survey this complex when we did, which was shortly before Thanksgiving Day, 1980. St. Clair Rutledge, the farmer in residence told us that on Thursday, December 18th, the farm equipment etc. would be auctioned off and he would be leaving. (See enclosed advertisement) The sale of the land and buildings had already been effected by the time we arrived on the scene. Mr. Rutledge planned on taking up residence in an apartment somewhere in the county. He didn't seem too concerned, nor did he have much of the way of regret at leaving his work behind him, and entering into the ranks of the retired.

## Description Continuation Sheet #4

NA-1594  
St. Clair Farm  
4302 St. Clair Bridge Road  
Jarrettsville, Maryland 21084

Brief conversations revealed certain information about the house and outbuildings. The modern bathrooms in the house were not added until circa 1935, when the farm was electrified and a pump installed to supply water to the upper floors. Mr. Rutledge remembers when cooking was done with a large woodfired cook stove.

Up through the early 1960's chickens were raised on this farm for production of eggs. There were between 1000 and 1500 laying hens, but when larger chicken farms made this small scale operation unprofitable, the hens were sold off.

Mr. Rutledge revealed that there was a log barn on the site of the newer (1950) gambrel roof barn. According to him, it was the same size as the new barn, and had a center drive with 2 log pens above the main floor was a mow with 3 pens for hay. Mr. Rutledge said there were 7 horse stalls and 3 stalls for heifers, and that you could not drive into the barn. He also said that he recalled two other log barns in this area.

When Mr. St. Clair Rutledge's grandfather moved here, the present bank barn (#15) and crib and drive (#9) were already here. His grandfather built the hay house, cattle shed, and the large corn crib (#14, 15, 11) and brought the smaller crib in from somewhere near Jarrettsville (#13). Mr. Rutledge recalled using the sleighs stored in the crib-drive (#9) up through the 1930's and in the 1940's.

Rocks Station was the closest village to this farm, and Mr. Rutledge recalled hauling milk in cans to be shipped via the Maryland and Pennsylvania R.R. into Baltimore. Each farm had 2 sets of cans for shipping milk by rail - one set would be picked up as the other was being delivered at the station. The milk cans were kept cold by packing them in ice. At one time there was an ice house on the St. Clair Farm, and the dimensions were given as about 14' X 14' with a 20' deep pit. Ice was cut from a nearby creek during the winter, and kept over the summer in this ice house. Milk cans were discontinued in the early 1960's, by which time milk was shipped via tank truck.

Mr. Rutledge reported that Rocks had a Post Office, a store, and a dance hall. Just about everything needed on the farm was procured in Rocks, or through the Maryland and Pennsylvania R.R. station there. None of the buildings referred to by Mr. Rutledge exist in 1981. The railroad ceased its operations in the lower part of Harford County by 1960, and Rocks Station was gone.

## Complete Farm Dispersal

Farm Machinery; Hay; Straw; Corn; Barley; Corn  
Ensilage; Milk Equipment; Household Goods;  
Misc. Tools

on

### Thursday, December 18, 1980

AT 9:30 A.M.

The undersigned discontinuing farming will offer for sale on the premises 6 miles east of Jarrettsville via Route 165 turn on St. Clair Bridge road and proceed 1 mile to first farm on left house No. 4225 in the 4th district of Harford County, Md. (watch for arrow signs).

**Farm Machinery:** Ford 601 tractor w/hydraulic 3 pt. hitch and Ford loader No. 703 w/2 buckets; Ford 501 mower 7' cut 3 pt. hitch like new; Ferguson 20 tractor w/hydraulic 3 pt. hitch; Ford 1492 mower 7' cut 3 pt. hitch good cond.; Dearborn single row corn picker; JD 953 rubber tire wagon w/16' flat bed; Ontario 14 disc grain drill; NH 67 baler; NI tractor manure spreader; Mayrath 32' hay and grain elevator w/motor; IHC ensilage cutter 7/50' of pipe; 1936 Ford 8 cyl. truck w/hoist and dump bed; Oliver manure loader; Ford 7' blade; IHC corn binder; dirt-scoop 3 pt. hitch; JD 2 bottom 14" trip plow 3 pt. hitch; JD Killifer disc harrow good cond.; IHC disc harrow; platform scales; 2 sets of tractor chains; 2 top hoist; 2 tractor type circular saws; Quincy air compressor; Harley-Davidson 125cc motorcycle; NI single row corn sheller; Stihl 050AV chain saw w/25" blade; metal hay rack; small 2 man chain saw; 12 volt battery pump; sump pump; battery charger; JD power take off air compressor; 200' elec. cord; bag cart; weed burner; Sunbeam skill saw; 1/2" drill; B&D 3/8" drill; 3 ton hydraulic jack; propane torch; drill bits; rubber tire farm trailer; roll of canvas; creeper; log chain; ax; ext. cord.

**Hay, Straw, Barley, Ear Corn, Ensilage:** Approx. 3000 bales of mixed hay; approx. 3000 bales of barley, straw and spelt; approx. 6 tons of ear corn; approx. 100 tons of corn ensilage; approx. 500 bushels of barley and spelt mixed.

**Milk Equipment:** 2 seamless Surge milk units; strainer; refrigerator; Steward cow clippers; elec. dehorner; hand type dehorner; barn radio; intercom system.

**Antiques:** cherry dropleaf table; iron oval chunk stove; oak bureau w/bevelled glass mirror; oak ornate high back double bed; oak washstand; dresser w/mirror; 2 oak straight back chairs; modern vinyl covered reclining chair. There are many items too numerous to mention.

Not responsible for accidents day of sale.

Lunch served.

Everything sold as is.
