

ADDENDA

In 1984 the Department of Natural Resources contracted with Joe Getty to conduct a follow-up survey of selected historic properties on DNR lands. DNR funded the field survey and photography but did not prepare finished copy. The attached photocopy pages were forwarded to the Maryland Historical Trust to supplement existing files. All original material and photographs remain in the possession of the Department of Natural Resources under the supervision of Ross Kimmel (x3771).

DRAFT--JERUSALEM MILL SAWMILL STRUCTURE

The 1979 survey form identifies a structure on the north side of Jerusalem Road as a blacksmith shop. According to the sketch of Jerusalem Mill and the community in "A Brief History of Jerusalem and its Mills" by G. B. Littlepage and H. Gay, this structure is identified as the sawmill. It is a one-story stone structure with a rectangular plan. It has a wide gable roof covered in asphalt shingles. The main facade of the structure originally had a wide-open bay that extended about twelve feet in the center of the structure. The building was converted to residential purposes and this bay was given a door and two windows. Another interesting feature of this structure is its ^{ci}principle purlin roof framing system with a ~~que~~^{Ad}-post truss.

The sawmill is located on the north side of Jerusalem Road, approximately .1 mile west of Jericho Road. The millrace for the mill runs within five feet of the east wall of the sawmill. The structure is located on a flat site directly across from the mill.

The sawmill is constructed of rubble fieldstone covered in stucco. The main (south) facade consisted of a single window and a large twelve-foot wide opening which now contains a door and two windows as infill. The west gable end contains a door in the northern ^{most} bay and three windows with a small window in the gable. The east gable end is ^{partially} ~~is~~ underground due to an embankment for the millrace and contains a small window in the gable, (~~partially underground~~). The north facade contains a

single window centrally located. The interior has modern partitions that converted the structure to residential use. Much of the interior has been remodeled except for the roof framing system. The roof system is a principle purlin roof which is supported by a queen post truss. A common rafter roof was then placed over the principle purlins.

Jerusalem Mill
HA-433

Located just on the Harford County side of the Little Gunpowder Falls on Jerusalem Road, the mill building is a massive structure built into a bank, rectangular in plan (about 60' x 36'), one storey of heavy timber frame on a quoined stone basement of between one and two stories. The north elevation is on the highest ground, with one storey of rubble-laid fieldstone, one storey of frame (board and batten) and the north slope of the gable roof, with two ranges of gabled dormers of three bays each. The southern elevation is similar, with the addition of an extra storey in the stone basement, owing to the slope of the site. Openings on the long elevation walls are more or less arranged into three bays on each frame wall, six on the ground level on the south which include two entrances, one entrance on the north. The end elevations (east and west) are similar to each other, with an entrance in the stone basement, two stories of two windows with a loft door between each, and a loft door in the peak of the gable, sheltered by a slight projection of the eave only over the door. Brick chimneys rise out of the southeast and northwest corners of the building, through the roof. Windows are generally 6/6. There is a datestone west of the entrance on the north elevation which is a circular piece of granite inscribed 1772 - DAVID LEE and surrounded by six segments of dressed fieldstone enlarging the circle. The interior appears to be mostly 19th century heavy timber framing, although the major framing members may be much older, in particular the 2' x 2' white oak corner posts, and other posts and beams throughout the total of five floors. All floors are unpartitioned. Some 19th century installed mill equipment, mostly chutes and conveyors, remain in place, but most moveable apparatus has been removed. Stairs rise in irregular flights from the south wall.

Jerusalem Mill
Description (cont'd)

Page 2

Blacksmith Shop
HA-435

A rubble-fieldstone structure of one storey with dressed coins. There is a broadly sloping roof, ridge east and west. Of the four irregularly spaced openings on the facade (south elevation), the group of two windows and a door appear to have been made in a large infill patch, in an original opening wide enough to have accomodated a large wagon. Windows and doors are randomly located on the other four walls. Most of the walls have been covered with a thin layer of "stucco". There are indications that the present apperance of the structure is an "improved" version of the original structure, which was a smaller stone building with a frame extension, perhaps open of the forge side, all under one roof approximately the dimensions of that which exists today.

House
HA-434

A two storey, two bay coursed rubble house under a shallow gable roof, ridge east to west. The house is located south of the mill. There is a massive (for the scale of this very small house) stone chimney centered outside the west gable wall which slopes into the wall and emerges as a brick chimney through the ridge of the roof. The entrance on the north elevation is at ground level and centered. There is a wooden shed addition at the south wall.

Jerusalem Mill
Significance (cont'd)

Page 2

The mill did no less well during this stage, producing \$1,200 worth of corn meal and \$12,000 of flour in 1849. Ralph instituted the production of kosher Passover flour for the Jewish community of Baltimore, which was growing rapidly in mid-century. This involved the presence of a congregation official to ensure that no other flour was ground between the start and the finish of the blessed kosher grain.

The business passed to Ralph's son David in 1862, who operated the mill through the Civil War. There was a skirmish at the mill in April 1862, during which a number of Vermont troops were drowned when a mill race was opened, flooding the area.

By this time, the operations of the mill had become widely diversified. This was common among such operations, which functioned as a center point in rural life, normally combining the flour milling with saw milling (David 2nd equipped the mill for lumber), cider presses and various retail operations. The Lees also ran a blacksmith shop and manufactured chair-rungs in the old gunstock addition.

After the Civil War, the personal attention of the Lee family was replaced by tenant occupation: the associated farm, blacksmith shop, store and post office as well as the mill itself, were run by separate lessees in the 1870's. The property passed out of Lee hands about 1886. It continued to operate under water power into the 20th century. A flood destroyed the dam in the early 1900's, and electric power was the replacement. Milling continued at Jerusalem until 1961, when the last miller, John Bridges, died, ending a chain that had been unbroken for nearly 190 years.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

This mill is an extremely massive structure, facing the Jerusalem Road to it's north, and being located just west of the Baltimore County line on the Gunpowder Falls. It is three and one-half stories high, the lower story consisting of uncoursed stone walls, quoined at the corners and covered by stucco on the western end. The upper floors are composed of vertical board-and-batten frame. Overall, the mill measures six bays by three and the windows are 6 X 6, some being covered over. The lower floor's bays have wood, stone or iron lintels and some of the southern side's doors are pegged. A wide, three-panel entrance is sited on the northern side of ground level, while two entryways are sited on the southern embrasure. There are four board-and-batten doors, one above the other, on each floor the structure, on the eastern extreme. A most unusual feature is the configuration of the dormers; two tiers of three gabled dormers each, with two such sets located on either side of the roof. The roof itself is a tin gable-flank, with narrow eaves. A brick chimney is stationed on the interior of the roof near the southeast corner, and a small tongue-like extension of the roof extends to shelter the line of doorways on the eastern wall. This projection probably held a block-and-tackle for the hoisting of flour bags.

Interior- Information provided by Mark Edwards of Maryland Historical Trust

Although much of the interior framing and woodwork has been altered in the Nineteenth Century, many architectural features still exist, such as the two foot square white oak post located at the corners of each floor of the building. Similar chamfered posts are also placed in intermediate positions in the floor and serve to shoulder large oak beams that span the ceiling and support each upper floor. The corner posts, mortised, tenoned and pegged with large treenails, are for the most part structurally sound. Later Nineteenth Century mill equipment, notably the two sets of grinding stones, as well as large storage bins and canvas conveyor belts, are also of interest and importance. Unfortunately, the large sixteen foot diameter water wheel of the overshot type is no longer in place.

SPECIFIC DATES

BUILDER/ARCHITECT

STATEMENT OF SIGNIFICANCE

The land that this mill is located upon was called Jerusalem and was patented in 1687. Another portion was known as Groom's Chance, also patented in 1687. Nicholas Hempstead and John Valley were the original patentees of the tract, and it was later rented from the lord proprietor by an Enoch Spinks for an annual rent of twelve shillings nine pence. The first mention of the builder of the mill appears in 1772, when the Baltimore County Land Records (AL E 383) indicate this tract to be owned by David Lee, who purchased it from one Isaiah Linton. This is also the date that the mill was said to be erected. The 1783 Tax List shows David Lee as owning 50 acres of "Bond's Water Mills" and "the mill thereupon". Lee not only made a successful living grinding flour, but also manufactured musket stocks during the War of Independence in a building attached to the rear of the present mill, conducting this business despite his Quaker heritage. The 1798 Tax List for the Gunpowder Upper Hundred, which is not very detailed, cites David Lee as owning two dwelling houses, seven outbuildings and 173 acres of land. The Lee mill was also demarcated on the 1795 Griffith as well as on the 1797 Bond maps. Court Records also state that in 1793, David Lee had an apprentice under his charge, one twelve-year old named Russell Davis. Davis was to be trained as a miller and a cooper. After nearly forty years of profitable enterprise, David Lee left the mill to his son, Ralph S., in 1811 and the son operated the concern until 1862. In 1850, under the ownership of Ralph S. Lee, an industrial census was taken, indicating that this mill was worth \$12,000, with two pairs of stones. In 1849, the mill produced 2000 barrels of flour worth \$12,000 and 2500 bushels of meal worth \$1200. In 1862, the mill passed into the hands of Ralph S. Lee's son, David, and did a thriving business during the Civil War. It was especially renowned for the production of passover flour for the Jewish population of Baltimore, an official being stationed there to supervise the procedure and to bless the flour. The small stone building in the rear of the mill proper was used as a cooper's shop for the manufacture of barrels for flour, and the rear addition was used for the making of chair rungs and also contained a cider press. A blacksmith shop across the road fabricated firearms during The Civil War, and it was at about this time that David Lee equipped the Jerusalem mill for sawing lumber. After 114 years of ownership by four generations of Lees, the business was conveyed to Ezra Phillips, who operated the mill until 1891, when William A. Wilson took the reins and lasted until 1905. Short stints by Joseph Weiner and Hymen M. Smotrisky led to ownership under Frank V. Hurley (1907-1926). The mill was water-powered

Jerusalem Mill- Historical Significance

going into the Twentieth Century, but a flood destroyed the dam and electric turbines were installed. Harry Pyle operated the mill into the 1950's, until Arthur Wells acquired the property in 1961. The last miller John Bridges, died in that year, and an industry that functioned for nearly 190 years ceased. The mill has never been drastically altered since it's conception, nor ~~have~~ the stone house or the blacksmith shop. This group of structures would be ideally suited for an historical interpretive site.

Description of Miller's House HA-434

This structure is located just south of the Jerusalem Mill. It is a two-story building with embrasures of uncoursed stone with quoined corners. A ramshackle clapboard addition is attached to the southern exposure. The dwelling is two bays across and one deep, with the windows having pegged frames, but being covered over. There is a door centered on the northern side of the building. The roof is a tin gable-flank. On the western extreme is an unusual chimney, where the outside-end, which is stone, curves into the wall as a buttress would, forming a flush-end brick stack.

Blacksmith's Shop HA#435

The blacksmith shop is located directly opposite the mill on Jerusalem Road, a one-story structure of uncoursed rubble stone, quoined at the corners. The walls are stucco-covered and the structure registers as four bays by four, although there have been alterations to the walls. There is an attic opening at either gable-end. The windows are 2 X 2's, with wooden lintels overhead. Single doorways are located on both the western and southern sides. The new asphalt roof is gable-flank, with a stubby stone chimney centered on the interior ridge-line. The eastern side of this building is built into the slope of the land.

city or town Annapolis state MD

The Maryland Historic Sites Inventory was officially created by an Act of the Maryland Legislature to be found in the Annotated Code of Maryland, Article 41, Section 181 KA, 1974 supplement.

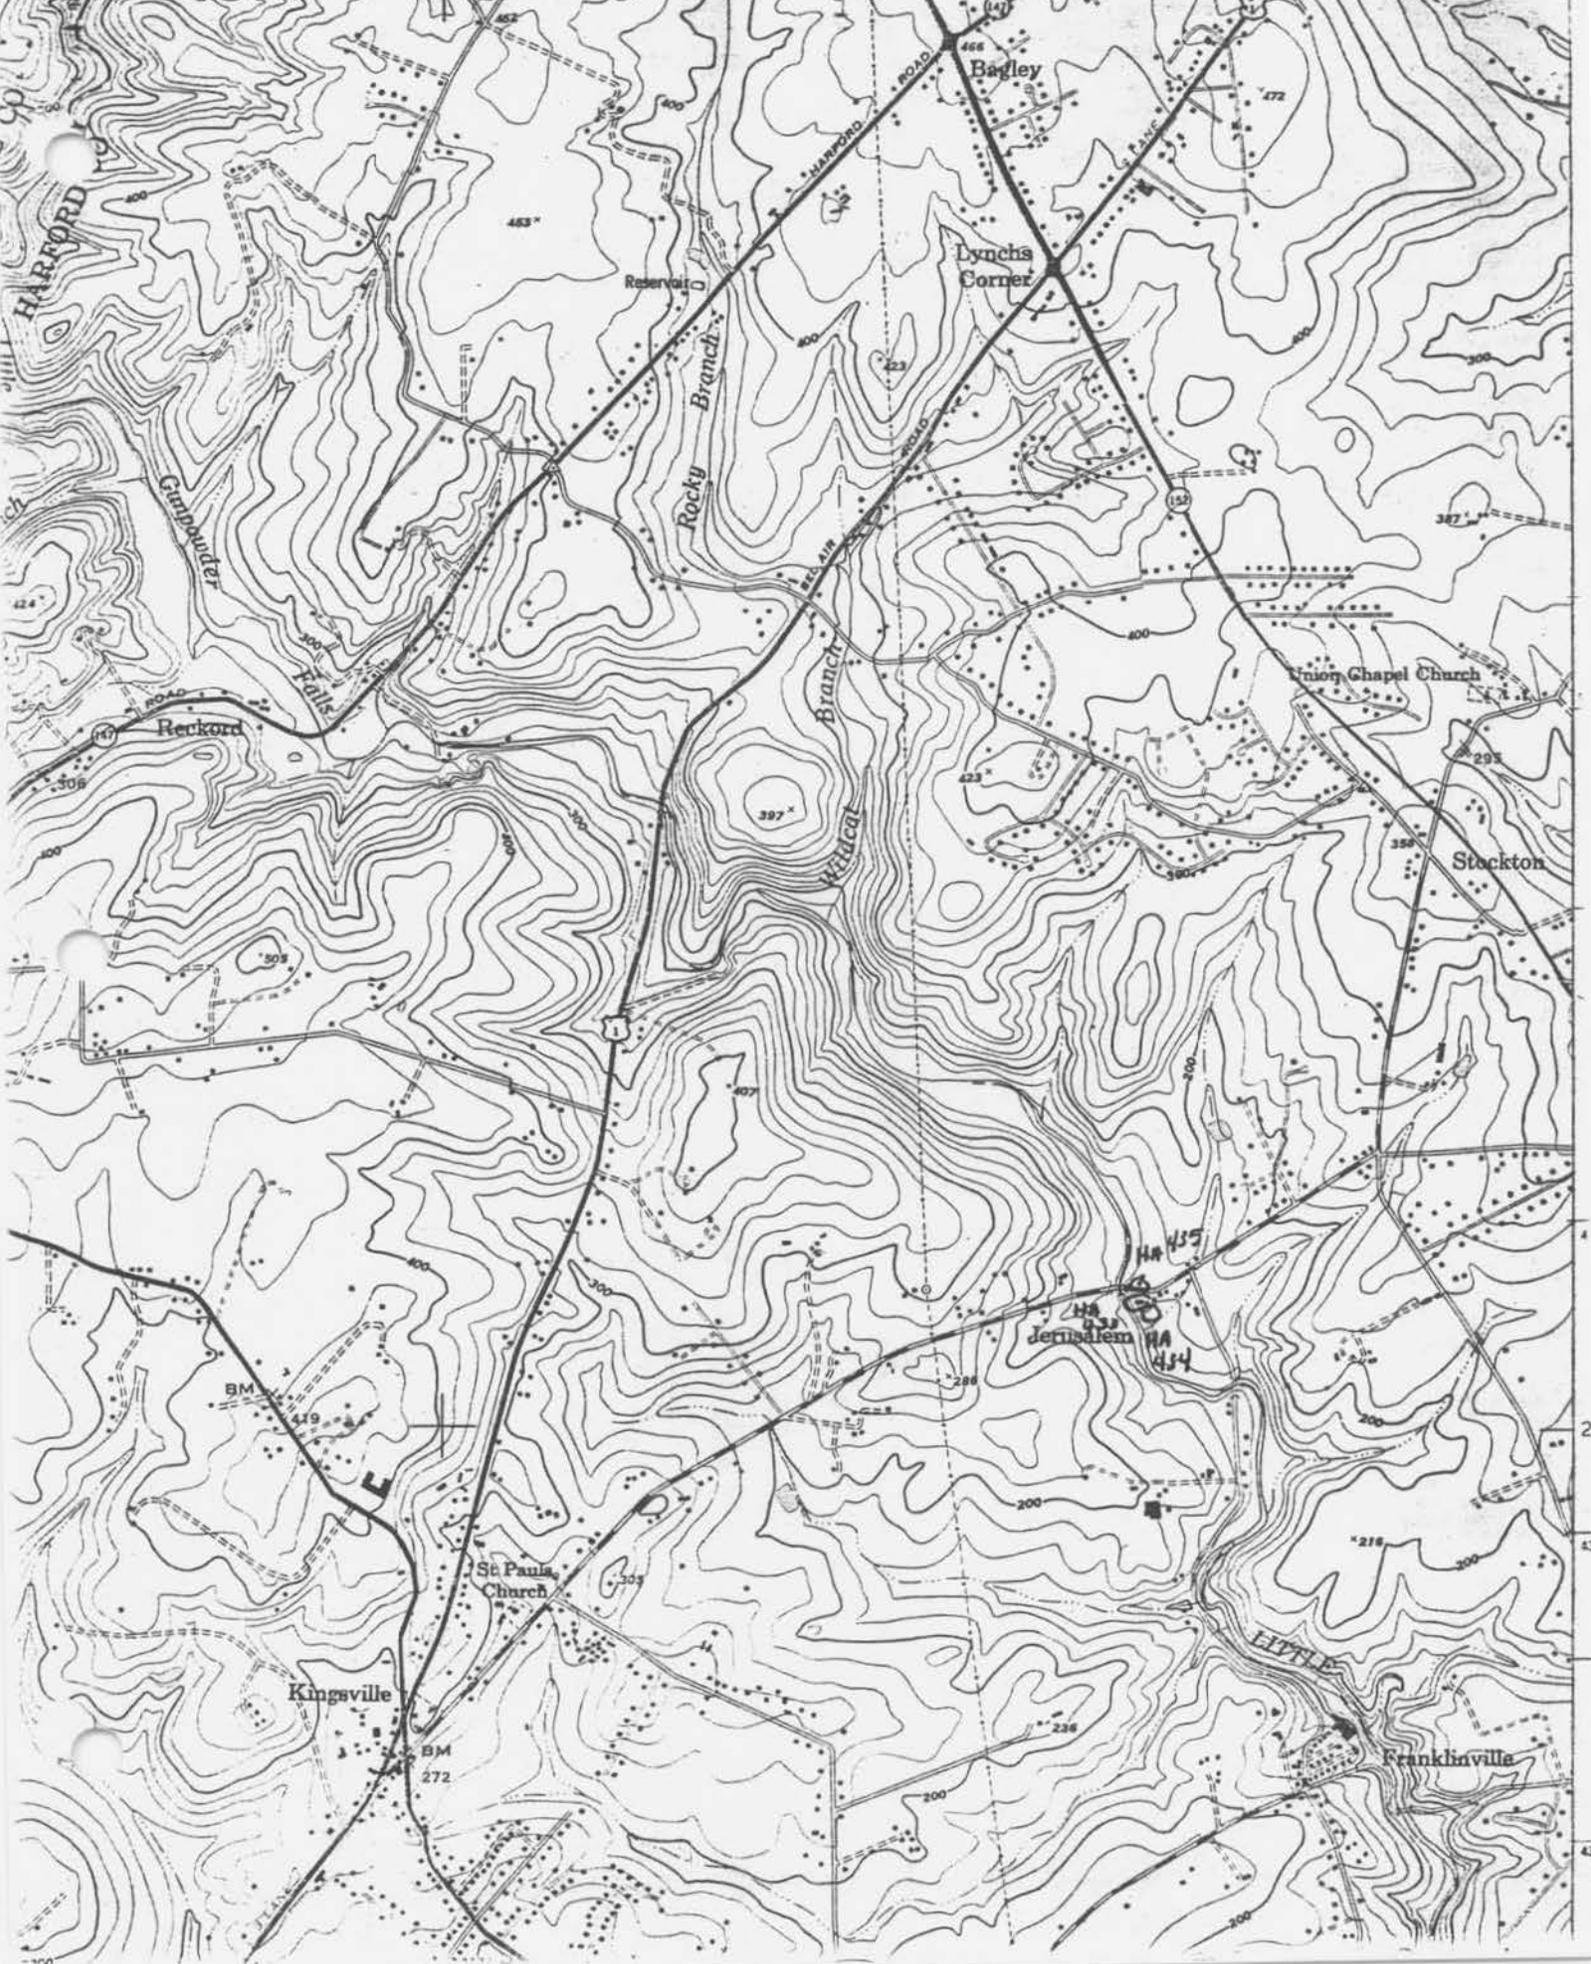

The survey and inventory are being prepared for information and record purposes only and do not constitute any infringement of individual property rights.
