

Jonestown Road Bridge  
Rogers Avenue and Center Way  
HO-619

The Jonestown Road Bridge is located about 200 feet east of Rogers Avenue south of the intersection of Center Way. Between the early-to-mid 1800s and 1960, the bridge carried Jonestown Road (now Rogers Avenue) over the Sucker Branch between Elysville (now Daniels) and Ellicott City. The single-span, single-lane bridge with a wood deck supported by steel beams has been altered over the years.

This road bridge is probably the last surviving early to mid-19th century road bridge in Howard County. The bridge carried traffic on Jonestown Road, later Rogers Avenue, until 1960.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

The Jonestown Road Bridge is located about 200 feet east of Rogers Avenue south of the intersection of Center Way. Between the early-to-mid 1800s and 1960, the bridge carried Jonestown Road (now Rogers Avenue) over the Sucker Branch between Elysville (now Daniels) and Ellicott City. The single-span, single-lane bridge with a wood deck supported by steel beams has been altered over the years. It was raised about five feet in the 1920s after flooding threatened to destroy it, and during the last decade its wood deck and steel supports were replaced and a simple wood railing was added, but its 19th century character and setting has been retained.

The bridge's deck is 25 feet long and ten feet wide, rising about 12 feet above Sucker Branch, a rocky stream flowing from Frederick Road to the Patapsco River at Ellicott City. The bridge has curved random-coursed rough-faced stone abutments topped by decorative rectangular cut blocks of granite. The abutments' walls rise about three feet above the roadway and curve outward creating a wall which "funneled" traffic onto the bridge. The north side of the bridge has been repaired with concrete which was added over the stone at its base. The south side retains its original appearance. The crushed stone roadway leading to the bridge on both sides dates from the 1920s.

The Jonestown Road bridge might be the last surviving mid-19th century road bridge in Howard County. It is surrounded by dense commercial and residential development on the U.S. 40 corridor. But, tucked away in a tiny swath of forest along the Sucker Branch stream valley, it still retains its historic character and setting.

Prepare both a summary paragraph of significance and a general statement of history and support.

This road bridge is probably the last surviving early to mid-19th century road bridge in Howard County. The bridge carried what is now Rogers Avenue over Sucker Branch until 1960.

Statement continued. See attached.

Rogers Avenue and Center Way  
HO-619  
Significance Statement Continued

The exact date of the bridge's construction is unknown, but it was probably built between 1800 and 1850. The road which crossed Sucker Branch at the point where the bridge is located appears on the Griffith map of Maryland dating from 1795. This road, now Rogers Avenue, runs between U.S. 40 and Old Frederick Road. Over the past 150 years it has been known variously as the "Road to Elysville," the "Road to Alberton" (names for the cotton mill town most recently known as Daniels), Jonestown Road, and Fells Avenue.

The road originally connected the Ellicott family's upper and lower mills in the late 18th century. Later it provided an important link between Ellicott City and Daniels, north of Hollifield.

Complaining of heavy traffic and poor conditions, area residents petitioned the county in 1920 for improvements on Fells Avenue, also known as Jonestown Road, between Ellicott City and Wheelwright Road (now Old Frederick Road). The county realigned the roadway to straighten curves and paved it with crushed stone manufactured on a nearby farm by Ezekiel Moxley. It was during this road project that the bridge was raised and reinforced with concrete to prevent flooding. In 1960 Rogers Avenue was widened and the bridge was abandoned when a new one was built a few hundred feet to the northwest.

For more the a century the Jonestown Road bridge played a vital role in transportation network of Howard County. While dense commercial development surrounds the bridge, the small section of stream valley where it stands provides a wooded, historic setting for the graceful stone bridge.

The bridge is in excellent condition with a new deck and railing and could easily accommodate pedestrian traffic.
