MEMORANDUM

TO: Bob Young, Chief - Division of I&C

FROM: Mike Dwyer, Park Historian *MAD*

SUBJECT: Response to inquiry regarding Quarries in Dickerson area.

The three quarries that you requested information on are unusually significant due to their historical as well as geological background. Two of the quarries in particular have had an impact on our national heritage as well as having contributed to the history of the state and local area. Lengthy references are available from many sources but I will limit myself in this report to a brief sketch of each site. Should you desire more detailed information, I have it available.

- (1) Rock Hall Quarry - Usually referred to as the famed "White Quarry" at the foot of Sugarloaf Mountain on property now owned by Md. DNR. Mills, iron furnaces and distilleries as well as quarries were established on this property by the Johnson family in the late 1700's and early 1800's. The Johnsons were the preeminent family of Western Maryland in the Revolutionary War period and Thomas Johnson was the state's first governor. The white colored mountain sandstone fuses at this point to form a beautiful as well as durable building stone. It was used initially to line the walls of limestone kilns and iron furnaces including Catoctin Furnace. What is believed to be the first railway system used in the U.S. was established here to transport stone from the mountain to the mouth of the Monocacy River, where it was used exclusively for the C&O Canal Aqueduct at this point. This aqueduct is considered to be one of the finest examples of masonry archwork extant. Sugarloaf Mountain, a Registered National Historic Landmark is formed by this deposit of stone. (See enclosed discription of quarry operation)
- (2) Marble Quarry - C&O Canal opposite Masons Island. This is a highly unusual, fine quality stone that is not actually a marble at all but a limestone conglomerate called breccia. It has been referred to locally as "Potomac Marble". After the U.S. Capitol was burned by the British in 1814, the famed architect Latrobe set out to redesign and build the finest interior

possible. For the semicircular House Chamber he selected elegant dark columns of breccia from this Montgomery County site and these pillars can be seen today in what is now the Hall of Statuary at the Capitol. It is well documented that Thomas Jefferson supervised many of the details of this work and was especially pleased with the House Chamber.

- ✓ (3) Dickerson Quarries - Rt. 28 S.W. of Dickerson. Actually consists of two quarries, the smaller of which was acquired by the District of Columbia government in 1898. Stone was taken from this deposit of very hard blue diabase by D.C. crews and shipped via the railroad to town where it was used for curbstones. It is believed that these work crews were often composed of convict labor. Quarrying was discontinued in 1905 and the property has been declared as surplus since. It was never considered to be suitable for building purposes.

The second quarry is owned by the Anderson family who acquired it during the 1930's when Otto Anderson was County Agent. It has not been utilized since before that time but when in operation it was worked by a Baltimore limestone company. A man named Mercer Jones reportedly worked at this quarry as a boy but he has been dead for many years. His house, built partly of logs, is the old farmhouse visible on Rt. 28 at the quarry.
(See maps enclosed)
