Describe the present and original (if known) physical appearance

The Kensington Historic District is located near the center of the town of Kensington, Montgomery County, and is bounded roughly by the Chessie System tracks from Armory Avenue to Montgomery Avenue, Kensington Parkway, Kent Street, Carroll Place, Calvert Place, the back lines of the properties fronting on Washington Street, Summit Avenue, Warner and Mitchell Streets, and Armory Avenue. These boundaries are more precisely delineated on the enclosed sketch map.

The district is a primarily residential neighborhood with a small commercial section at the northern boundary along Howard Street at the railroad tracks. The setting is one of a turn of the century garden suburb with curved drives winding through landscaped blocks with the houses placed with a uniform set back among tall trees. The terrain is gently rolling except for a sharp rise to the west of Connecticut Avenue, a broad-but-surprisingly-not-too-divisive multi-laned curved roadway that bisects the entire town. The slope of this hill probably was not originally as sharp as it presently appears before the widening of Connecticut Avenue many years ago.

The Kensington Historic District is the core of the original town that was incorporated in 1894. The district lies to the south of the railroad station at Howard Street. The area is dominated by large late 19th and early 20th century houses, many with wraparound porches, stained glass windows, and curving brick sidewalks. Large well-kept lawns, ample size lots, flowering shrubbery, and tree lined streets contribute to the turn-of-the-century environment which Kensington still retains inspite of its close proximity to Washington, D. C.

The district contains approximately 155 major buildings. Of this number more than two thirds are structures that were erected as residences. Three of the buildings in the commercial section along Howard Street and the northern end appear to have been built for both commercial and residential use. More than 90% of the buildings are considered as contributing to the historical and/or cultural character of the district (see attached sketch map.) The residential buildings are constructed mainly of wood, a few are stuccoed, probably over wood, with generally only the mid-20th century houses using brick. The commercial buildings are nearly all of masonry construction.

Most of the houses divide into six stylistic catagories. The catagories are Queen Anne, Shingle, a Victorian which often contains a strong Eastlakian element, Colonial Revival, and Functional. These catagorical divisions are based on a combination of decorative detailing and configurations of the buildings. Some of the houses are eclectic and could fit into more than one catagory. In brief description of the principal characteristics of these styles as found in the Kensington Historic District with examples is as follows:

SEE CONTINUATION SHEET #1.

(DESCRIPTION, continued)

Queen Anne: generally characterized by a round or polygonal tower, use of clapboard and shingle siding, some half-timbering in the gable ends, and wide porches with attenuated columns. Example: 10226, 10231, 10234, Carroll Place; 3820 and 3915 Washington Street.

Victorian: frame gable roofed structures, often with the gable end facing the street, generally covered with clapboards but shingles in the gables, having facade porches with Eastlakian influenced balustrades and posts. Example: 10310 Fawcett Street, 10312, 10314, 10316 Armory Avenue; 3918 Prospect Street; 3730 Howard Street; 3945 Baltimore Street.

Shingle: frame structures with large gambrel roofs, gambrel generally facing the street, usually covered with clapboard and shingle siding. Example: 3930 Washington Street, 10314 Fawcett Street, and the Noyes Library at Carroll Place and Montgomery Avenue.

Colonial Revival: characterized by use of a dominate Georgian feature such as a pedimented doorway or oculi, generally covered by clapboards. Example: 3948 Washington Street, 10213 Montgomery Avenue.

Functional: often Queen Anne in solidity but almost devoid of exterior decorative detailing except simple Classical influenced porch columns; covered with stucco, shingles, or clapboards or sometimes both; hip or gable roof usually with one dormer centered on the facade; windows often group in twos or threes. Example: 10224 Montgomery Avenue, 10302 Fawcett Street, 3906 Washington Street.

Several of the buildings are of special note primarily for architectural reasons. The house at 10407 Fawcett Street is both Queen Anne and Shingle in influence. It has a large gable roof which begins at the base of the second floor and extends over the facade porch. A large hip roofed dormer with a columned balcony projects from the second story of the facade. Number 3927 Washington Street, another frame house, has a low hip roof with a wide overhang that is

SEE CONTINUATION SHEET #2.

(DESCRIPTION, continued)

supported by flat brackets almost imitating rafters and creating a strong Craftsmen-feel. The stuccoed house at 10313 Fawcett Street is significant as being the only Spanish Revival influenced building in the district.

Town Hall, a 1927 castellated brick structure, was originally erected as an armory for the Maryland National Guard. Another structure of interest is an early 20th century masonry gas station with its hip roof extending over the pumps which stands at the intersection of Armory Avenue and Howard Street. The 1891 Queen Anne decorated frame railroad station, around which the town developed, retains most of its decoration only covered by monochromatic paint.

Most commercial buildings are circa 1920 one story brick structures with large windows and the brick laid in decorative patterns. Most of the buildings remain in tack because they were simple structures when erected.

The buildings labeled non-contributing or intrustions on the sketch map are primarily mid-20th century houses which are scattered throughout the district. (The boundaries of the district are drawn to exclude the heaviest concentration of these houses). Two buildings in the commercial section, 3734-3748 Howard Street and 1020 Montgomery Avenue, are either late-19th or early-20th century buildings which were extensively altered (probably beyond the point of feasible restoration) in recent years. Seven buildings in commercial area are of mid-20th century construction but, although not contributing to in configuration or materials (most one flat-roofed brick structures), are generally set in the same line of the older buildings and well landscaped.

BOUNDARY JUSTIFICATION

The boundaries of the Kensington Historic District were drawn as to include the highest incidence of buildings and structures which meet the criteria for inclusion in the National Register of Historic Places, either individually or in group, and contribute to the historical and cultural character of the district but so as to exclude concentrations of non-contributing buildings such as along the south side of Carroll Place, the north side of Calvert Place, and both sides of Hadley Place.

Statement of Significance (in one paragraph)

SIGNIFICANCE

The Kensington Historic District is a turn-of-the-century urban, primarily residential, area which incorporates most of the original core of the town of Kensington, Maryland, a suburb of Washington, D. C. The district is significant primarily for the collection of late 19th and early 20th century houses which stand in a turn-of-the-century garden-like setting of curving streets, tall trees, and mature shrubbery. The houses, which exhibit the influence of Queen Anne, Shingle, Eastlake, and Colonial Revival styles, have a uniformity of scale, design, and construction materials, that combine with their juxtaposition and placement upon the gently sloping terrain to create a significant urban neighborhood which still retains much of its early 20th century environment.

HISTORY

The town of Kensington is one of several Washington suburbs which were developed in the late 19th century primarily as summer residential communities Incorporated in 1894, Kensington became a community center in the 1870s when a post office was established. An 1865 map shows about five landholders in what is today Kensington with the Knowles family being a prominent one. With the coming of the railroad in 1873, which provided a north-south transportation route, and the Bladensburg Turnpike, a market road which provided an east-west linkage, the crossroads became known as Knowles Station. Thus remained the status of Knowles Station for another decade until Brainard Warner, a quintessential late Victorian entreprenuer, developed Knowles Station into Kensington Park.

Warner had come to Washington, D. C. in 1863 to work as a clerk in a Civil War hospital. Constance Green, in her history of Washington, describes Warner as "an unknown country boy who came to work as a government clerk and who found undreamed-of riches in real estate." He was only sixteen when he arrived in the nation's capital but letters to his father back in Pennsylvania show a keen power of observation and maturity. By the time he set his sights on Knowles Station in 1890, he was wealthy and had also invested in real estate enterprises in Takoma Park, Forest Glen, and in the Chautauqua at Glen Echo.

At Knowles Station, Warner purchased about 125 acres at first and then acquired additional land which allowed him access to the railroad. In November 1890, he filed a plat map under the name of "Kensington Park", allegedly because he was impressed with the Kensington section of London. He then invited his friends to build houses in this summer retreat away from the heat and congestion of Washington. For his own residence, he is said to have extensively remodeled an existing farm house.

This house, located at 10231 Carroll Place and now used as a nursing home, is an ornate Queen Anne frame structure with an ornate Queen Anne

SEE CONTINUATION SHEET #3.

(SIGNIFICANCE, continued)

frame structure with an enormous round tower and stands among full grown trees in the center of a large lot encircled by the street, Carroll Place. Warner's main house was a brick structure at 2100 Massachusetts Avenue in the millionaire section near DuPont Circle in the District.

Warner and a friend, Crosby Noyes, editor of the Washington Star, united on the idea of establishing a library in Kensington. This library, which still functions today in the original building, is important as the first public library in the Washington area outside of the district limits. Warner donated the land, a site across the street from his house, and Noyes, for whom the library is named, donated the books, most of which are said to have been left over from the Star's book review section. The library building is an 1890s Shingle style frame structure, two stories high with the gambrel roof and a small facade gambrel bearing the library name and a sculpture of an owl.

"The Civil Service Act of 1883 contributed to the new era of suburban growth for Washington.... Although only a small number of federal jobs were at first put on the merit list, the idea of a stable, middle-class population in Washington encouraged real estate investors to begin developing suburban communities.... The government clerks, lawyers, bankers, and business people of late 19th century Washington...wanted the sophistication and ammenities of a city with the wholesome atmosphere of the countryside. They were looking for the rural homes of their own childhoods, without the toil of a farmer's life and they found it in Garrett Park and Kensington." (MacMaster and Hiebert pp. 209 and 231). These first residents set the tone for future growth in Kensington.

Kensington's development slowed during the Great Depression, as did the development of most towns. In the economic boom of the 1950s and 1960s, however, the town again grew only now at a rate much faster than originally. Vast sections of the town that were still vacant, particularly to the south and east of Warner's house, were further subdivided and filled in with "ranchers" and "split-levels" that sharply contrast with the earlier buildings. Although bisected by Connecticut Avenue, a six lane curving concrete ribbon, the Kensington Historic District as a whole is unscarred by the rapid changes taking place around it.

At least two architects, both from Washington, have been identified as designing houses in the Kensington Historic District. These architects

SEE CONTINUATION SHEET #4.

(SIGNIFICANCE, continued)

are Edward Woltz, who authored the frame Classical influenced house at 10213 Montgomery Avenue and T. M. Medford, who designed the stuccoed hip roof structure with straight lines and simple decorative detailing at 3924 Baltimore Street.

VERBAL BOUNDARY DESCRIPTION

The Kensington Historic District contains approximately 79 acres of land and is bounded by a combination of streets and property lines for those buildings shown on the accompanying sketch map. More precisely, these boundaries are the Chessie System tracks along the north turning south at the east line of the railroad stake near the intersecting Montgomery Avenue and west to Montgomery Avenue, southeasterly along Kensington Parkway, west on Kent Street, south and north westerly around Carroll Place to the south line of property 1021 Carroll Place to the south line of property 1021 Carroll Place, west along this line and south along the back lines of 10209 and 10205 Connecticut Avenue and 3859 Calvert Place, then northwest along the southerly border of 3819 Calvert Place to Connecticut Avenue then south to and east along Washington Street bearing north to include property 3709 Washington Street and south along east boundary of 3708 Washington Street and west along the back property lines of the houses fronting on the southerly and westerly side of Washington Street, then west along the property 4010 Prospect Street, north along Summit Avenue and east along the back line of 4011 Prospect Street, bearing north and east along back lines of properties 3947, 3941, and 3935 Baltimore Street, then north along back lines of properties 10316 to 10310 Freeman Street, then east along Warner Street to and north along Armory Avenue to the point of beginning at the Chessie System tracks along Howard Street.
