DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

Dating from the eighteenth century, the Wright House is a frame house measuring approximately 18½ by 38 feet, three bays in length, one room in depth, one and one-half stories in height, with a gambrel roof; shed-roofed porches extend across each long (east and west) facade. A one-story shed-roofed wing stands against the north end. Exterior walls are covered with asbestos shingles and roofs are covered with asphalt shingles. The porches are enclosed, largely with windows. The northerly half of the west porch has been extended to form another room. Porch ceilings are covered with random-width beaded boards indicating the porches to be early if not original to the house.

A brick chimney with two flues rises internally at the south end of the house, its first story formerly exposed, nearly flush with the siding (and now covered uniformly with asbestos shingles). Another brick chimney rises externally against the north gable, its first story exposed within the shed-roofed wing at that end. The rough and unfinished character of that brickwork does not suggest that it was meant to be exposed to viewing or the weather; either a utilitarian room—perhaps the present wing or an earlier one not unlike it—where appearances and weather were unimportant, or a framed chimney breast enclosure within a more finished room—now missing—always existed here. There is no fireplace facing north and the stack above contains but one flue.

Two shed-roofed dormers, each with 6/6 sash, are in both the east and west roofs.

Principal entrances are in the middle bay of the east and west facades, slightly south of center, and a large 6/6 window is in each of the flanking bays, except for the west facade's north bay where a door gives access to the room which has replaced the porch there.

The east door is in place but the west door has been removed, stored elsewhere on the premises. The east door is of six fully-raised panels, lined internally with vertical beaded boards fastened to the stiles and rails of the paneled door with rose-headed wrought nails. Long strap hinges and driven pintels remain in use but the large rim lock has been replaced with a late nineteenth century one. Pintels remain at the west door, indicating its former similarity.

In the south gable a six-light casement lights the stairwell in the second story, in the southeast corner of the house.

A door is in the east end of the north wing and two 6/6 windows are in its north side.

Internally each story is divided into two rooms, the southerly one being the larger, occupying two bays and containing the principal entrances.

PAGE 1

DESCRIPTION (continued)

In the second story a hall leads from the staircase in the southeast corner to the north room, its area subtracted from the south room.

The south end wall of the south room is fully paneled while other walls are plastered, with baseboard and chair rail. The ceiling is plastered. The upper rails of the paneling are dramatically out-of-level, sloping down from the centered chimney area and they apparently were built to that condition; rails at about chair rail height and bottom rails are approximately level. Panels are fully raised and quirked ovolo moldings are integral on stiles and rails, a profile characteristic of the late eighteenth century.

A large cavetto backband surrounds the large fireplace; it is flanked by plain pilasters supporting fluted blocks in the frieze, matching a similar but wider center block in the frieze. An extended bed-molding supports a shelf with a cavetto molded edge. Above the mantel there is no paneling and the chimney breast is plastered.

West of the chimney is a large closet with a single six-panel door, formerly hung on HL hinges, now replaced with butts. East of the chimney is the staircase, enclosed and winding, to the second floor. Several straight steps, without a rail, lead up to a six-panel door, its head at the ceiling. Its plane is slightly forward or north of the chimney and closet paneling to the west and an area of paneling, containing a four-panel door to the closet beneath the stair, is set on a slight angle to meet the plane of the staircase door.

There is no cornice. The top wall plates project into the rooms, encased, and the corner posts project into the stairway and closets. Posts flanking the two exterior doors are cased with beaded boards and a pair of fully-raised panels fills the space above the door, all slightly forward of the plastered surfaces elsewhere. An ovolo backband applied to the post casing and to the paneling above trims the door.

The beaded chair rail has an ogee molding supporting a plain board cap, its exposed edge simply rounded.

The windows probably are enlarged from the original: their sills are below the chair rail, their panes are considerably larger than the 8"x10" panes typical of the period and their plain trim with raked head all indicate a later date. Irregularities in the glass suggest that these changes are not

DESCRIPTION (continued)

especially recent, however.

In the stud and plastered partition separating the two rooms of the first story is a six-paneled door slightly east of center. The architrave trim has an ovolo backband and all elements match comparable work elsewhere in the room. Formerly hung on wrought HL hinges, the door is now hung on butt hinges.

Architectural embellishment of the north room is simple: there is neither paneling nor chair rail; the mantel consists of plain pilasters supporting an un molded frieze containing a single panel with an "X" raise, topped with a plain shelf supported by a vertical echinus molding, all suggestive of the 1840's or 1850's. The window is trimmed as described in the south room. The door to the west room (described above as an extension of the porch) is of four un molded panels but its architrave surround has an ogee-with-astrigal backband, suggestive of ca. 1815-1830. The six-panel door leading to the north wing is typical of the earlier work described in the south room but it is now hung upside down. Its head is dramatically out-of-level, recalling similar conditions in the south room.

The interior finishes of the north wing and west wing (or extended porch) are plain.

In the second story a short section of rail encloses the stairwell above the triangular lower steps, toward the east. The plain square newel supports a plain square rail, its rounded end projecting slightly beyond the newel. Balusters are plain, square.

The south room has a small fireplace with an architrave surround matching door trim throughout the house. A small closet west of the chimney has a six-panel door, like the doors to both rooms from the hall, all retaining their wrought HL hinges.

The north room has no fireplace.

The attic is inaccessible and there is no cellar.

All outbuildings are of the twentieth century. One, about ninety feet north of the house and approximately aligned with it, has a stone-walled cellar with an east-west dimension less than that of the frame structure above, accessible via a stone-walled stairwell within the outbuilding, entered through a door in the east facade at the southeast corner. It was probably a root cellar or an ice house, originally.

SPECIFIC DATES

BUILDER/ARCHITECT

STATEMENT OF SIGNIFICANCE

The Wright House was the dwelling of a moderately successful eighteenth century farmer or planter. Its frame construction, its gambrel roof, its porches and its interior detailing are all typical of Maryland's eighteenth century tidewater architecture.

It is strikingly similar to Poplar Hill (listed on the National Register), although smaller: Poplar Hill contains two rooms separated by a hall with an open straight staircase while the Wright House contains two rooms, an enclosed winding staircase and no hall. The earliest ownership histories of the two houses are similar and they stand on opposite sides of a very early road, a little more than a mile apart.

Most of Harford's County's tidewater lands are within the Aberdeen Proving Grounds (and Edgewood Arsenal, now administratively a part of A.P.G.). The Wright House is between this large military reservation and the industrial development lying along nearby US-40, like Poplar Hill, on a virtual pocket of unchanged farmland. The corridor containing US-40 and the Penn-Central Railroad (and these two historic structures) is slated for industrial development.

While the Wright House has seen some superficial change, most of its details remain, even if hidden by modern finishes, and as the house is untouched by the modern restorer, its details of all periods are wholly honest, identifiable and believable.

The Wright House and surrounding acreage was part of the 1547-acre tract called Cranberry Hall which was owned by John Hall (1658-1737), one of the first settlers in Harford County. The land was passed from one generation to another. It is likely that the elder Hall's grandson John, who received the tract in 1742, may have built the Wright House. Upon his death in 1779, the land was left to his sons, Edward and John Beadle. The Wright House lies on that portion of land left to John Beadle. Upon John Beadle Hall's death, he left one-sixth of his estate to his daughter Martha, and from a search of the land transactions, it is evident that the house was located on the land that she received.

The Halls were a prominent family in Harford County history. It is likely that many of the Hall family lived on the Cranberry Hall tract. Both Poplar Hill and the Wright House are surviving examples of the domestic architecture on this large estate. John Hall, who died in 1779, was one of the commissioners

appointed to buy land to build a courthouse and prison for newly-formed Harford County in 1773. John Beadle Hall served the county as a member of the militia during the American Revolution. He was second Lieutenant of Company #1, authorized by the duly elected War Committee of the County, and later saw action in the skirmish of White Plains, New York where General Howe and General Washington's forces met. Harford County sent a battalion of two militia companies to assist the Continental Army. John Beadle Hall was captain of one of these companies.
