Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

the William Moffit House is a 1-1/2 story, 5-bay vernacular cottage on the north side of Sunnyside Avenue in Beltsville. Constructed in 1926, the building has a massed plan with a shallow-pitch roof. The structure has a side-gable roof with an offset front-gable covered in asphalt shingles with stucco and it has a formed concrete block foundation. The windows are double-hung wood sash.

The William Moffit House was constructed in 1926 on Lot 3, Block C, Section 1 of the subdivision known as Sunnyside, which was laid out by Fillmore Beall in 1925. The original plan called for five blocks called A through E. The total number of lots originally laid out was 98, arranged along the north-south streets of Balatimore and Rhode Island Avenues and Libbie Street, and along the east-west streets of John Street, Sunnyside and Fillmore Avneues and Buchannon Road. The subdivision included a 30-foot building restriction. The majority of the subdivision was not developed as a residential suburb in the 1920s. Instead most of the area was acquired as part of the Beltsville Agricultural Research Center. The area to the north of Sunnyside Avenue was developed as an industrial park in the 1970s.

Constructed in 1926, the Moffitt House is not eligible for the National Register of Historic Places under Criterion C because it is an undistinguished example of the bungalow style house. It has been altered on the exterior by a sheathing of stucco and a

CAPSULE SUMMARY SHEET

PG:61-67

Survey No.: ~~PG:67-98~~ (PACS 2.17) Construction Date: 1926

Name: William Moffit House

Location: 5108 Sunnyside Avenue, Beltsville Vicinity, Prince George's County

Private/Industrial/Occupied/Good/Restricted

Description:

The William Moffit House is a 1½-story, 5-bay vernacular cottage on the north side of Sunnyside Avenue in Beltsville Vicinity, Prince George's County. Constructed in 1926, the building is a massed plan with a shallow-pitch roof. The structure has a side-gable roof with an offset front-gable covered in asphalt shingles with an interior brick chimney in the side wing. It is of masonry construction with stucco and it has a formed concrete-block foundation. The windows are double-hung wood sash.

Significance:

The William Moffit House was constructed in 1926 on Lot 3, Block C, Section 1 of the subdivision known as Sunnyside, which was laid out by Fillmore Beall in 1925. The original plan called for five blocks called A through E. The total number of lots originally laid out was 98, arranged along the north-south streets of Baltimore Avenue, Rhode Island Avenue, and Libbie Street, and along the east-west streets of John Street, Sunnyside Avenue, Fillmore Avenue, and Buchannon Road. The subdivision included a 30 foot building restriction. The majority of the subdivision was not developed as a residential suburb in the 1920s. Instead, most of the area was acquired as part of the Beltsville Agricultural Research Center. The area to the north of Sunnyside Avenue was developed as an industrial park in the 1970s.

Resource Count: 1

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

The William Moffit House is a 1½-story, 5-bay vernacular cottage on the north side of Sunnyside Avenue in Beltsville Vicinity, Prince George's County. Constructed in 1926, the building is a massed plan with a shallow-pitch roof. The structure has a side-gable roof with an offset front-gable covered in asphalt shingles with a interior brick chimney in the side wing. It is of masonry construction with stucco and it has a formed concrete-block foundation. The windows are double-hung wood sash.

The south, or front elevation has a raised foundation that has been covered with a aggregate veneer. There are no windows in the basement level. The first story entrance is in the center bay, and it is reached by a set of concrete steps. The fenestration pattern is symmetrical. There are two 6/1 double hung windows in the first two bays, a 6/1 double-hung window in the fourth bay, and a 1/1 double-hung window in the fifth bay of the first story. The second story has a window opening in the gable, fitted with a fixed light window, and a louvered window above an air conditioner. The windows all have brick sills. There has been aluminum soffit and fascia added to the roofline.

The west elevation consists of the west side of the main block and a rear 1-story shed roof addition. The basement level has two openings, both of which are filled with concrete block. There are four window openings on the first story. The second from the south has been filled with concrete block, but the others are fitted with 6/1 double-hung windows. There are no openings on the west side of the concrete block shed-roof addition.

The north, or rear elevation consists of the gable-end of the main block, and two shed-roof additions which extend from the side wing across two-thirds of the main block. There is a door in the northwest corner of the basement level of the main block. There is a second door at ground level in the first shed addition. The second shed addition is of wood-frame construction on a raised concrete foundation. There is one 6/1 double-hung window in the first bay of the main block on the first story. The rest of the first story is obscured by the second shed addition. There is a door in the second shed addition. The second story has a window in the gable. It is a 1/1 double-hung window set into a larger window opening which has been partially closed.

The east elevation consists of the gable-end of the side wing and the second shed addition. There is one closed window opening at the southeast corner of the side wing.

There are no outbuildings associated with this building.

The property is located on the north side of Sunnyside Avenue, with commercial and industrial property to the north, south, east, and west. The building is currently surrounded by a paved area which is fenced off from adjoining lots. There is a corrugated metal building approximately 1.5 meters (5 feet) from the east side of the building. The property's setting is now industrial in character. When the building was constructed, it was located in rural residential area which is becoming suburban in character.

Prepare both a summary paragraph of significance and a general statement of history and support.

The William Moffit House was constructed in 1926 on Lot 3, Block C, Section 1 of the subdivision known as Sunnyside, which was laid out by Fillmore Beall in 1925. The original plan called for five blocks called A through E. The total number of lots originally laid out was 98, arranged along the north-south streets of Baltimore Avenue, Rhode Island Avenue, and Libbie Street, and along the east-west streets of John Street, Sunnyside Avenue, Fillmore Avenue, and Buchannon Road. The subdivision included a 30 foot building restriction. The majority of the subdivision was not developed as a residential suburb in the 1920s. Instead, most of the area was acquired as part of the Beltsville Agricultural Research Center. The area to the north of Sunnyside Avenue was developed as an industrial park in the 1970s.

William Moffit defaulted on his mortgage, and the property was purchased by N. Bryan Steward in 1928. Steward sold the property in 1949 to Herman and Amalie Knop. The Knops sold the property to Christopher and Elizabeth Flora in 1966. The Floras sold the property to the present owners in 1968.

The William Moffit House is located to the south of Beltsville. Beltsville, named after the Belt family, is an area of Prince George's County on either side of Route 1 from Ammendale Road to the Capital Beltway. During the 1700s and early 1800s, the Snowden family possessed large estates which were located on both sides of what is now Route 1, and on land which is now the Beltsville Agricultural Research Center. In the colonial era, tobacco farming occurred along Indian Creek, a tributary of the Northeast Branch of the Anacostia River. Later, farmers in the area produced grains and vegetables.

By 1795, a turnpike from Baltimore to Georgetown in the District of Columbia had been constructed through the county. Taverns were established along the turnpike (present day Route 1 and Old Baltimore Pike), including one operated by Jacob Van Horn in what is now Beltsville. The tavern, called Vansville, serviced turnpike travellers from the 1790s to 1817. In the 1830s, the Baltimore and Ohio Railroad built tracks for the Washington Branch through the Belt family farm and established a station which was named Beltsville. The station, located along the turnpike, the east-west roads of Odell and Powder Mill, and the railroad, grew during the 1800s and became a village containing two churches, residences, stores, and businesses such as a blacksmith and a wheelwright shop.

RESOURCE NAME: William Moffit House

SURVEY NO.: ~~PG-67-88 (PACS 2.17)~~ PG: 61-67

ADDRESS: 5108 Sunnyside Avenue, Beltsville Vicinity, Prince George's County

8. Significance (Continued)

During the late 1800s, Beltsville became part of the expanding Washington, D.C. suburbs, as development occurred along the railroad and streetcar lines north of the city. Federal workers could live in the suburbs and work downtown, and many new communities were established from the District line to Beltsville. The suburban development continued after the introduction of the automobile. The state improved the roads, and Route 1 became the major north/south route along the east coast. Although the Beltsville Agricultural Research Center was established in 1910 and employment in the area increased, Beltsville was relatively far from Washington, and the more southern suburbs experienced greater growth. It was not until after the Second World War that intensive development came to the Beltsville area. The increase in Federal employment and the dramatic rise in personal automobile use led to the suburbanization of Beltsville. The area west of Route 1 was developed as a residential area, and the development increased in the 1960s as Interstate 95 made the area more accessible. Today, most of the farms are gone and Beltsville has become a densely populated suburb of the Nation's Capital.

The William Moffit House is an example of a vernacular cottage. Between 1870 and 1940 the vernacular cottage style was typically built for Americans of modest means. They are characterized by simple ornamentation and mass-produced components, such as door frames, moldings, sash and window units, and porch decoration. The development of post-Civil War machinery capable of producing large amounts of standardized housing elements, such as those found in cottages, contributed greatly to the development of the modern American housing industry. Designs for vernacular cottages were obtained from popular magazines, such as House Beautiful, or carpenter's and builder's journals, such as American Builder. A variety of front-gable, side-gable, cross-gable and hipped roof frame cottages were developed in the early to mid-twentieth century. Front-gable and hipped roof cottages are primarily 1 to 1½-stories tall, 3-bays wide and several rooms deep. Side-gable and cross-gable structures are usually 2 to 2½-stories tall, are typically 2 to 3-bays in width and vary from one to three rooms deep. They usually include a porch covered with a shed roof. Porches are supported by posts often containing machine-produced Victorian ornamentation. Some cottages feature ornamentation drawn from Craftsman style or Colonial Revival architecture (Gottfried and Jennings 1988, viii-xv).

8. Significance (Continued)

National Register Evaluation:

Constructed 1926, the William Moffit House Property is not eligible for the National Register of Historic Places. The property is not eligible under Criterion A, as research conducted indicates no association with any historic events or trends significant in the development of national, state, or local history. Historic research indicates that the property has no association with persons who have made specific contributions to history, and therefore, it does not meet Criterion B. It is not eligible under Criterion C, as it is an undistinguished example of a common architectural type which has been altered with stucco, shed additions, and the expansion of the area as an industrial park. The building no longer retains integrity of materials, design, setting, feeling, or association. Finally, the structure has no known potential to yield important information, and therefore, is not eligible under Criterion D.
