

QA-270  
Blue Bay Farm  
Stevensville vicinity  
Private

circa 1760-90

Blue Bay Farm is one of the most interesting 18th century houses on Kent Island. Probably constructed circa 1760-90, the house bears comparison with several other contemporary houses on Kent Island and in Annapolis. The header bond brickwork is only found in four other buildings in Queen Anne's County but was quite popular in Annapolis and Chestertown from the 1740's until the 1780's. The unusual four room plan is also relatively unusual on the Eastern Shore. It may be compared with several other 18th century houses on Kent Island, and more significantly, with a group of houses in Annapolis, several of which also employ header bond brickwork. Much of the early interior woodwork also survives, including an extremely fine glass front cupboard, handsome fielded paneling, interior cornices and an unusual eight-panel exterior door.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

Blue Bay Farm is located on the west side of Maryland Route 18 on Kent Island approximately two miles north of Stevensville. The house is sited near the bay shore and faces west and southwest across the Chesapeake Bay.

The original house is of brick construction, two stories high, five bays wide and two rooms deep with flush brick chimneys at either end of the pitched gable roof. A two story wing projecting from the north gable wall is of frame construction with a 20th century brick veneer.

The east facade, facing the road, serves today as the principal facade. The front door with side-lights and transom is located in the center bay flanked by two 6/6 windows on each side. Five 6/6 windows are ranged across the second story; there are no dormer windows. The brickwork is laid in Flemish bond above a plain watertable. The house foundation is concealed by the foundation of a one story porch that stretches across this facade. A one-course belt course is almost entirely concealed by the porch roof. The eaves are boxed in and trimmed with a complex bed mold; the roof is covered with asphalt

## CONTINUATION SHEET

## 7.1 DESCRIPTION

shingles.

On the south gable wall, there are single 6/6 windows in the west bay of the first and second story and two four-light windows flanking the chimney in the upper gable. A bulkhead cellar entrance is located in the east bay of the foundation. The brickwork is laid in three-course bond above a plain water table and English bond foundation. A one-course belt course stretches across the gable and turns the east corner but stops flush with the west facade. The rakeboards are modern replacements.

The west facade fenestration is similar to the east facade except the first floor door lacks sidelights and a double door in the center bay of the second story opens onto the flat roof of a small entrance porch. The first floor door, architrave and five-light transom are all original. The brickwork on this facade is laid in all-header bond above a plain water table and English bond foundation. There is no belt course on this facade. The cornice and roof match the east facade.

The majority of the north gable wall is concealed by the two story wing. The brickwork on this facade is laid in three-course bond above a plain water table and English bond foundation. The one-course belt course is also present on this gable. The rakeboards are replacements.

## CONTINUATION SHEET

## 7.2 DESCRIPTION

The wing is two stories high and three bays long. The west wall is set back approximately six feet from the west facade of the main house. The frame structure has been covered with a brick veneer.

The interior plan of the main house has evidently been modified slightly. At present the first floor consists of three rooms: a rectangular stair hall to the southeast, a nearly square room with fireplace to the southwest, and a large rectangular room extending the full depth of the house to the north with a single fireplace centered on the north gable wall. A large triangular chimney base and interior partition wall in the north end of the cellar suggest that the north room was originally partitioned to form two smaller chambers with a shared chimney stack. This four room plan is virtually identical to Morgan's Enclosure (QA-169) and is similar to Cloverfields (QA-269), two brick houses on Kent Island dating to circa 1780.

The southwest room is the most formal room on the first floor. The fireplace is on the south gable wall, flanked by a window on the right and an original built-in cupboard to the left. The cupboard is semi-circular in plan with a pair of arched doors with the original glass, wide muttons, and butterfly shelves. The cupboard is trimmed with a large cove architrave

## CONTINUATION SHEET

## 7.3 DESCRIPTION

molding with a small molded keystone. The lower cupboard doors are paneled and match the fielded paneling over the mantel. The mantel is a particularly handsome broken-field surround with an arched opening, and a simple shelf with a broad cove molding. This mantel covers the lower edge of the paneling and was probably added circa 1790-1810. Early trim in this room includes a large, complex interior cornice, heavily molded architrave trim and an unusual paneled door on the west facade. This door is unusually wide and is paneled with two rows of three vertical fielded panels below a pair of horizontal panels at the top. The door is hung with three H-L hinges and is fitted with a large box lock with brass knob and fittings. The soffits and jambs of this door opening and the door to the north room are paneled. Other trim includes a one-piece chairrail and later rabbeted baseboard.

The north room originally consisted of a pair of smaller chambers with a shared triangular chimney. The chimney and partition have been removed and replaced with a more conventional fireplace centered on the north gable wall. The fielded paneling in this room may have been reused from one or both of the smaller chambers. The mantel in this room is a simple 19th century board surround with a cove molding below a simple shelf.

## CONTINUATION SHEET

## 7.4 DESCRIPTION

The interior cornice in this room breaks forward above the windows. The cornice appears to be original on the facade walls and has been skillfully pieced in on the north and south walls. The rabbeted baseboard dates to the mid-19th century.

The second floor is quite unusual. An L-shaped hall extends through the center of the house from west to east and across the south end of the east facade to the stair. There are three chambers on this floor, one to the southwest and two smaller chambers to the north. The southwest chamber is the largest and most formal of the three. It is heated by a small fireplace on the south gable wall. The chimney breast is boxed in with handsome fielded paneling and the fireplace is flanked on the left by a closet with fielded four-panel door on H-L hinges and on the right by a small cupboard in the cheek wall of the chimney breast. The fielded six-panel doors to the southwest chamber and the northwest chamber are hung on H-L hinges and molded baseboard survives in the hall and both west rooms. The two north chambers are not heated, though original fireplaces were probably removed when the original triangular stack was altered. The partition between these two rooms is no longer supported from below and has been reinforced by running tie rods up to the attic and "hanging" the second floor partition from above.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

Blue Bay Farm is located on the west side of Maryland Route 18 on Kent Island approximately two miles north of Stevensville. The house is sited near the bay shore and faces west and southwest across the Chesapeake Bay.

The original house is of brick construction, two stories high, five bays wide and two rooms deep with flush brick chimneys at either end of the pitched gable roof. A two story wing projecting from the north gable wall is of frame construction with a 20th century brick veneer.

The east facade, facing the road, serves today as the principal facade. The front door with sidelights and transom is located in the center bay flanked by two 6/6 windows on each side. Five 6/6 windows are ranged across the second story; there are no dormer windows. The brickwork is laid in Flemish bond above a plain water table. The house foundation is concealed by the foundation of a one story porch that stretches across this facade. A one-course belt course is almost entirely concealed by the porch roof. The eaves are boxed in and trimmed with a complex bed mold; the roof is covered with asphalt shingles.

On the south gable wall, there are single 6/6 windows in the west bay of the first and second story and two four-light windows flanking the chimney in the upper gable. A bulkhead cellar entrance is located in the east bay of the foundation. The brickwork is laid in three-course bond above a plain water table and English bond foundation. A one-course belt course stretches across the gable and turns the east corner, but stops flush with the west facade. The rakeboards are modern replacements.

The west facade fenestration is similar to the east facade except the first floor door lacks sidelights and a double door in the center bay of the second story opens onto the flat roof of a small entrance porch. The first floor door, architrave and five-light transom are all original. The brickwork, on this facade, is laid in all-header bond above a plain water table and English bond foundation. There is no belt course on this facade. The cornice and roof match the east facade.

## CONTINUATION SHEET

## 7.1 DESCRIPTION

The majority of the north gable wall is concealed by the two story wing. The brickwork on this facade is laid in three-course bond above a plain water table and English bond foundation. The one-course belt course is also present on this gable. The rakeboards are replacements.

The wing is two stories high and three bays long. The west wall is set back approximately six feet from the west facade of the main house. The frame structure has been covered with a brick veneer.

The interior plan of the main house has evidently been modified slightly. At present the first floor consists of three rooms: a rectangular stair hall to the southeast, a nearly square room with fireplace to the southwest, and a large rectangular room extending the full depth of the house to the north with a single fireplace centered on the north gable wall. A large triangular chimney base and interior partition wall in the north end of the cellar suggest that the north room was originally partitioned to form two smaller chambers with a shared chimney stack. This four room plan is virtually identical to Morgan's Enclosure (QA-169) and is similar to Cloverfields (QA-269), two brick houses on Kent Island dating to circa 1780.

The southwest room is the most formal room on the first floor. The fireplace is on the south gable wall, flanked by a window on the right and an original built-in cupboard to the left. The cupboard is semi-circular in plan with a pair of arched doors with the original glass, wide muttuns, and butterfly shelves. The cupboard is trimmed with a large cove architrave molding with a small molded keystone. The lower cupboard doors are paneled and match the fielded paneling over the mantel. The mantel is particularly handsome broken-field surround with an arched opening, and a simple shelf with a broad cove molding. The mantel covers the lower edge of the paneling and was probably added circa 1790-1810. Early trim in this room includes a large, complex interior cornice, heavily molded architrave trim and an unusual paneled door on the west facade. This door is unusually wide and is paneled with two rows of three vertical fielded panels below a pair of horizontal panels at the top. The door is hung with three H-L hinges and is fitted with a large box lock with brass knob and fittings. The soffits and jambs of this door opening and the door to the north room are paneled. Other trim includes a one-piece chairrail and later rabbeted baseboard.

## CONTINUATION SHEET

## 7.2 DESCRIPTION

The north room originally consisted of a pair of smaller chambers with a shared triangular chimney. The chimney and partition have been removed and replaced with a more conventional fireplace centered on the north gable wall. The fielded paneling in this room may have been reused from one or both of the small chambers. The mantel in this room is a simple 19th century board surround with a cove molding below a simple shelf. The interior cornice in this room breaks forward above the windows. The cornice appears to be original on the facade walls and have been skillfully pieced in on the north and south walls. The rabbeted baseboard dates to the mid-17th century.

The second floor is quite unusual. An L-shaped hall extends through the center of the house from west to east and across the south end of the east facade to the stair. There are three chambers on this floor, one to the southwest and two smaller chambers to the north. The southwest chamber is the largest and most formal of the three. It is heated by a small fireplace on the south gable wall. The chimney breast is boxed in with handsome fielded paneling and the fireplace is flanked on the left by a closet with fielded four-panel door on H-L hinges and on the right by a small cupboard in the cheek wall of the chimney breast. The fielded six-panel doors to the southwest chamber and the northwest chamber are hung on H-L hinges and molded baseboard survives in the hall and both west rooms. The two north chambers are not heated though original fireplaces were probably removed when the original triangular stack was altered. The partition between these two rooms is no longer supported from below and has been reinforced by running tie rods up to the attic and "hanging" the second floor partition from above.
