DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Durham House is located on the southeast side of Maryland Route 313 in Sandtown, directly across the Andover Branch of Chester River from the town of Millington.

This small frame house is probably the oldest surviving building in Sandtown. When first observed in the winter of 1978, the house was up on blocks and attached to a small bulldozer. The owner was planning to move the building back some distance from the road, which has been widened in recent years. The house remained in a precarious position until 1980, when a wind storm knocked it off of the blocks. The building fell to the southwest and at present rests on its chin in a semi-collapsed state. The first story of the main house and the rear wing are destroyed, leaving only the second story reasonably intact.

The house was originally 16 feet wide and 20 feet long, 1 1/2 stories high and one room deep with a gambrel roof. Surviving early window openings include two 6/6 shed roof dormers on the front facade, one 6/6 dormer on the southwest end of the rear facade and two 6/6 windows on

7.1 DESCRIPTION

the second floor of the northeast gable. A 2/2 window centered on the second story of the southwest gable is a later feature, added when the original flush brick chimney was removed.

The first floor interior consisted of a single room with no visible evidence of the original chimney or of a possible interior partition. The second story was divided into two nearly equal rooms. The original plaster is applied to riven lathing secured with machine nails. Early trim on the second story includes beaded baseboard, rabbeted window trim and an interior door surround with a cyma reversa backband. Evidently the original stair location was in the southwest corner of the building, adjacent to the gable chimney. When the chimney was removed, this stair was replaced with one that ran across the east end of the southwest gable.

A frame rear L projected from the north end of the rear facade.
