

S-335
Rhodes Point Survey District
Smith Island
public

Nineteenth and twentieth centuries

Rhodes Point is the smallest of the three communities located on Smith Island. The watermens' village consists of approximately two dozen one- or two-story houses along with the Calvary United Methodist Episcopal Church. Built in 1921, the ell-shaped frame church has Gothic Revival style doors and windows. The houses of Rhodes Point largely follow two basic types, the three-part "telescope" dwelling or the two-and-a-half story cross gabled frame house with a rear service wing. The largest structure standing in the village is a turn of the twentieth century frame house that stands on the north side of the bridge. Distinguished by a pyramidal roof with multiple gables, this squarish frame building is surrounded by a Tuscan columned front porch. Located on the west side of the village road is a group of single-story crab houses of board and batten construction.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

Rhodes Point is located on the tip of Smith Island, Somerset County, Maryland. Smith Island Road connects Ewell and Rhodes Point, the two communities on the main island. Tylerton, the third town, is located on a separate island.

Rhodes Point consists of two-dozen one- and two-story houses along with a church, two store buildings and several crab houses. These buildings are oriented to Smith Island Road which deadends at Rocking Point, the southern tip of the community. Similar to other watermen's communities, the structures that define the village largely date from the second half of the nineteenth century and the first half of the twentieth century.

Centered in the village is the only church, the Calvary United Methodist Episcopal Church. Built in 1921, this ell-shaped frame building is supported by a concrete block foundation and sheathed with vinyl siding. Rising in the southwest corner is a three-story tower. A Gothic arched double door entrance is topped by a colored glass transom. The south face of the tower has single colored glass windows on each floor, and the third level is marked by rectangular louvered vents. Four square post finials rise from the tower roof. The main body of the church is lighted by single colored glass lancet windows, and on the south side a tri-partite window is centered within the gable. Narrow brick stove stacks rise from the southeast corner.

The houses of Rhodes largely follow two basic types, the three-part "telescope" dwelling or the two-and-a-half story single pile frame house with a rear service wing. Facing Smith Island Road between the bridge and the church is a line of four two-and-a-half story cross gabled frame houses supported by minimal brick foundations and clad with artificial asbestos or vinyl siding. Two or three bays across by one room deep, these side or center hall houses are lighted by two-over-two or six-over-six sash windows and Gothic arched windows illuminate the attics. Narrow brick chimneys with corbelled caps pierce the roofline on either side of the hall. Attached to the back of the house is a two- or one-story service wing.

The three-part "telescope" houses, on the other hand, descend in height from two full stories to a story-and-a-half to a single-story kitchen. Supported by minimal brick foundations, these houses are also clad with artificial siding and covered with asphalt shingle roofs.

The largest house in Rhodes Point is a turn of the century frame house that stands on the north side of the bridge. Distinguished by a pyramidal roof with multiple gables, this squarish frame house is supported by a brick pier foundation and sheathed with weatherboards. A single-story Tuscan columned porch surrounds the house on the south side, and narrow brick chimneys pierce the roof.

Located on the west side of Smith Island Road is a group of single-story frame crab houses of board and batten construction. Supported on piers, these frame structures are covered by simple gable roofs with asphalt shingles, and small window openings pierce the north, east, and south sides.

Prepare both a summary paragraph of significance and a general statement of history and support.

Rhodes Point is the smallest of the three communities located on Smith Island. Comprised of two-dozen houses, a church, two stores and several crab houses, Rhodes Point follows the same pattern of buildings found in Ewell, Tylerton, or other contemporary villages on the mainland. Largely dating from the second half of the nineteenth century and the first quarter of the twentieth century, these buildings are entirely built of frame construction with modest attention to decorative finishes. Moderate alterations have included layers of artificial siding.
