(Page 1)

c. 1880s-1900s

From its location, overlooking Canoe Neck Creek, St. Clements Bay, as well as Newtown Neck, Burlington derives its significance from the high integrity of its surrounding environment, as well as its overall architectural design, association with the Dent family, and for its potential to yield important archaeological information. Situated near the agricultural crossroads community of Oakley, Maryland, Burlington is a two story, frame, double-pile plan dwelling constructed in the 1880s-1900s. For almost 90 years, the dwelling served as the ancestral home of the Dents, a locally prominent family who were active in politics, agriculture, commerce, and education. John F. Dent, originally purchased the 234 acre property surrounding "Burlington" sometime in the 1840s or 1850s from John Kilgour. Architectural evidence suggests the current house was built between 1880-1900. The exterior was covered with "German" or beveled siding, the balustrade on the front porch and widow's walk featured intricate scroll sawn work, much of the frame was attached together with mature cut nails, and the interior mantles and decorative trim are all consistent with the time period. In the 1910s a two story kitchen was added on to the east gable end of the dwelling.

Curiously, remnants of an English brick bond foundation were located in the basement that suggested the current building replaced a dwelling of an earlier date. The earliest reference to "Burlington" is found in the St. Mary's County Debt books which note that from 1756-1758 George Bullock owned "Part of Burlington or St. Clements Manor" which contained 75 acres. John Bond also owned a similarly named tract that contained only 25 acres during the same time period but no mention of a house is made. Native American middens as well as a possible seventeenth century domestic site just south of the dwelling reveals that Burlington encompasses almost five or six centuries of St. Mary's county history and prehistory.

c. 1880s-1900s

John F. Dent, a prominent politician who was at one time the Speaker of the House of Delegates, wrote extensive diaries from 1853-1898. While he never mentioned the construction of the house, Dent wrote periodically about the injustices Union troops inflicted upon him and his neighbors and needless to say was a fervent Confederate supporter who also spoke out extensively about the rights of states. Oral tradition relates that Dent's harbored escaped prisoners from Point Lookout and helped them escape to Virginia. But while known for their controversial exploits, the Dent's were also tremendously active in education. J. Marshall Dent, for instance served as a school trustee for the school in Oakley and was also oversaw the Female Seminary School in Leonardtown. Lettie M. Dent (later Gough) is best known as an educator and superintendent of schools for St. Mary's County from the 1920s-1950s. She oversaw a critical period in the county's schools--the shift away from one room schoolhouses to consolidated elementary and high schools. As a result of her dedicated service a scholarship fund was created in her memory--an award to students in St. Mary's County interested in pursuing careers in education. The county also named an elementary school near New Market after Miss Dent.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

Contributing Resources: 3

Located in Oakley, Maryland, Burlington is situated on Route 470 (Oakley Road) approximately 2 miles south of the northern intersection of Maryland Routes 470 and 242 (Colton Point Road). The house is approached via a straight 0.2 mile long dirt drive that terminates on a circular drive in front of the dwelling. Lying at the headwaters of Canoe Neck Creek, the house is oriented on a north-south axis and overlooks the confluence of Canoe Neck Creek and St. Clements Bay. It is surrounded by cultivated fields of corn and soybean and is situated near several agricultural outbuildings including an old stable (now garage), two tobacco barns, an old chicken house, and a stripping shed.

Originally constructed in the 1880s-1890s, Burlington is a two story, frame, double-pile plan dwelling with a two story gable end wing erected in the 1910s. Situated on a common bond brick foundation, the house is sheathed on the exterior with "German" siding attached to the circular sawn frame with cut nails. The eaves are enclosed and the roof, pierced by three interior chimneys with corbelled tops, is covered with asphalt shingles.

The primary or north elevation presents a symmetrical placement of bays or openings. The central three bays are located in a two story projection with a gable front. The three bays of this section consist of a four panel door with a single light transom flanked on either side by a six-over-six, double-hung sash window. The three first floor bays are shaded by a gable front porch. The porch features scroll sawn brackets, chamfered posts, and a scroll sawn balustrade. The second floor of the projection is pierced by three, six-over-six windows. The attic story is pierced by a Palladian window that consists of a central four-over-four window with two-over-two sidelights. Each side of the central projection features two, six-over-six windows on both the first and second floors. Each window bay features hardware for louvered shutters, but the shutters are currently being repaired and repainted. The two story wing is located on the east side of the dwelling. Each floor of the wing is pierced by two, two-over-two windows.

The west or gable end elevation is pierced on the first and second floor by three, symmetrically aligned six-over-six windows. A fourth set of bays was precluded by the construction of an interior end brick chimney that rises in its stead. The attic story is pierced by a centrally located six-over-six window.

The south or water side elevation features eight bays on the first floor and seven on the second floor. While this elevation does not feature a projection it does exhibit a centrally located cross gable. The main centrally located door features fifteen lights with a single light transom overhead. To the west of the door are two six-over-six windows, a fifteen light door to an old bedroom, and a six-over-six window. To the east, the main block is pierced by three six-over-six windows, while the kitchen wing features a four panel door and a four-over-four window. All of the bays on the first floor are shaded by a screened-in porch that was constructed using the original chamfered posts. The second floor of the main block is pierced by seven six-over-six windows while the wing is pierced by one door that leads to a second floor sun-porch lit by a series of one-over-one modern sash. The attic story of the main block is lit by a three-part Palladian window with a central six-over-one window flanked by two-over-two sidelights.

The east elevation consists of the gable end of the wing and main block of the dwelling.

Prepare both a summary paragraph of significance and a general statement of history and support.

From its location, overlooking Canoe Neck Creek, St. Clements Bay, as well as Newtown Neck, Burlington derives its significance from the high integrity of its surrounding environment, overall architectural design, association with the Dent family, and for its potential to yield important archaeological information. Situated near the agricultural crossroads community of Oakley, Maryland, Burlington is a two story, frame, double-pile plan dwelling constructed in the 1880s-1900s. For almost 100 years, the dwelling served as the ancestral home of the Dents, a locally prominent family who were active in politics, agriculture, commerce, and education. John F. Dent, originally purchased the property surrounding "Burlington" sometime in the 1840s or 1850s from John Kilgour. Dent and Kilgour, however, never recorded a deed to recognize the transaction. Finally in 1881, Dent was officially granted the tract by Kilgour's daughter Jane Hagul Goldis Collins. The tract was noted as being located at the head of Canoe Neck Creek and part lying in Church Swamp and containing 234 acres. Seven years later in 1887, John F. Dent took out a \$3000 mortgage possibly to fund the building of the present house. Because the Dent's were hit hard by the economic realities of post-abolition agriculture, however, this money might also have been used to merely pay off their many debts. Architectural evidence appears to confirm an 1880s-1900s date. The exterior was covered with "German" or beveled siding, the balustrade on the front porch and widow's walk featured intricate scroll sawn work, much of the frame was attached together with mature cut nails, and the interior mantles and decorative trim are all consistent with this timeperiod in St. Mary's County architecture. In the 1910s a two story kitchen was added on to the east gable end of the dwelling. Curiously, remnants of an English brick bond foundation were located in the basement that suggested the current building replaced a dwelling of an earlier date. The property also contains three tobacco barns--two erected c. 1840s and another that dates from the early twentieth century.

Native American middens as well as a possible seventeenth century archaeological site just south of the dwelling dates the first occupation to prehistory. The earliest historic reference to "Burlington" is found in the St. Mary's County Debt books which note that from 1756-1758 George Bullock owned "Part of Burlington or St. Clements Manor" which contained 75 acres. John Bond also owned a similarly named tract that contained only 25 acres during the same time period. Burlington, therefore, encompasses almost five or six centuries of St. Mary's County history and prehistory.

John F. Dent, the matriarch of the Dent family and once a Speaker of the Maryland House of Delegates, wrote extensive diaries from 1853-1898. While he never mentioned the

SM-144, Burlington
St. Mary's County
7.1 Description

The wing is pierced on the first floor by two, two-over-two windows and on the second floor by two, six-over-six windows. The main block is pierced on the first floor by two, six-over-six windows and on the second floor by two, six-over-six windows. The attic story is lit by a centrally located six-over-six window.

The interior of Burlington features a center passage double pile plan. The center passage, however, is exceptionally wide and functions as a sitting room. The passage/sitting room permits entry into every room on the first floor. More specifically, the passage is flanked on both sides by two rooms and also leads into a library/study directly to the south. The passage also contains the stairs to the second floor. The stairs feature a turned newel (similar to that found at the Thompson House (SM-594)) as well as turned balusters. All of the window and door surrounds on the first floor are darkly stained and exhibit slightly arched hoods. Each of the rooms that radiate from the center passage contain a fireplace that feature similarly reeded pilasters and friezes. Two of the rooms, in the northwest and southeast corners, feature slightly less decoration on the window and door surrounds signalling a secondary importance. Interestingly, Clair and Dr. Bill Mulford noted that one of these rooms was originally used as a bedroom. The kitchen wing, located on the east side of the dwelling, presently consists of one room that also contained a pantry. It is connected to the main block through separate doors to the two side parlors. An enclosed stair to the second floor further connects the kitchen wing to the main block. The second floor of the main block features a similarly large sitting room with five bedrooms radiating from it. A bedroom over the kitchen is accessed through a door located in the northeast corner bedroom of the main block. The attic is unfinished but was intended to eventually be a livable space. The stair decoration was continued, the door jambs were installed, but the plaster work was never begun. The roof framing consists of circular sawn members. The rafters are butted at the peak to a ridge board and fastened with mature cut nails.

The property also features two mid-nineteenth century tobacco barns. The first barn is located just north of the house and east of the farm road. The barn is a rectangular structure oriented on a east-west axis. The main structure measures approximately 24 feet wide and 60 feet long. Sheds once extended from the west and south sides of the building but were removed during a recent renovation.

Constructed c. 1840s, the main body of the barn features a cross axial plan with large double doors centered on the east and west elevations, and narrow single doors centered on the north and south gable ends. Several other doors have been added to the east and west facades during the recent renovation. A single door was added to the west side and a double door was added on the east side. Many of the doors feature reproduction wrought hinges that were based on original strap hinges that were used to hang the doors. The barn currently features a concrete pier foundation and the exterior is clad with vertical board siding. At the juncture of the roof and wall is an open cornice that exhibits the ends of the structural ties. The roof is covered with raised seam metal.

The barn's interior is divided into fifteen, four foot "rooms" created by tobacco poles, but the barn is divided into seven structural bays of approximately 9 feet each. The primary transverse aisle between the east and west walls is served by the two paired doors on those respective elevations. The braced frame construction consists of heavy hewn corner posts and intermediate studs that are joined by four levels of horizontal rails. These horizontal rails serve as nailers for the exterior siding, provide lateral support for the framing system, and also support the tobacco poles.

SM-144, Burlington
St. Mary's County
7.2 Description

The corner posts as well as some of the intermediate studs are further strengthened by pit sawn and hewn down braces. Intermediate lateral support is achieved through two transverse sills that feature braces. These two sills were replaced during the renovation. These braces connect the sill to a large stud. The studs and corner posts rise until they are mortise and tenoned into a hewn wall plate. The plates on the east and west sides feature a scarf joint that enables the structural member to extend the full length of the barn. The wall plate supports a series of vertically set, structural ties that are hewn and pit sawn. A series of vertical round poles bisects the barn longitudinally from north to south on four foot centers and provide an intermediate support for the tobacco poles. They feature round through-mortises to receive the tobacco poles. These vertical poles are mortise and tenoned to the structural ties. The ties support a hewn false plate which in turn supports the hewn rafters. Each rafter pair is strengthened laterally by three ties that are half lapped and nailed. The rafters are joined at the roof peak with half lap joints that are nailed with fully formed cut nails.

The second barn is located approximately 0.2 miles northwest of the house on the south side of Oakley Road. The barn is a rectangular structure oriented on a north-south axis. The main structure measures approximately 24 feet 6 inches wide and 80 feet long. An original, earthfast, hipped roof, lean-to shed, measuring approximately 40 feet wide and 20 feet long, extends from the east gable end of the barn.

Erected in the 1840s, the second barn is constructed of hewn and pit-sawn lumber. Like the first barn, the building features a cross axial plan with large double doors centered on the north and south elevations of the main section of the building. The double door on the north elevation has been extensively altered and was converted into a single door entry in the twentieth century. Just to the east of this converted door is another single door entry. The south elevation features a large central double-door, a loft door for hay storage, as well as an opening in the shed that was never secured with a door. Several of the doors feature wrought strap hinges with pintels. These hinges appear to have been reused from earlier doors as the straps were secured with wire nails and screws.

The frame of the barn rests on a fieldstone foundation. The exterior is sheathed with circular sawn vertical board siding that is secured with a combination of cut and wire nails. At the intersection of the roof and wall is an open cornice that features the ends of the interior structural ties that extend beyond the exterior wall surface. The roof is covered with raised seam metal.

The most distinctive feature of the barn is the framing system. While divided into eight foot structural bays, the barn is further subdivided by a series of four, transverse, braced sills. The bays are spaced on eight foot centers, while the transverse sills are roughly on sixteen foot centers. The studs, sills, braces, rails, wall plates, and ties are all either hewn or pit-sawn. A series of vertical skinned cedar posts line the center of the barn to support the two sets of horizontal tobacco poles. These vertical posts are mortise-and-tenoned to the wall ties. The ties are half-lapped over the wall plate and extend beyond the face of the exterior wall. The common ties support a hewn flat false plate which, in turn, buoys the common rafter roof. Each rafter pair is joined together by three half-lapped, common ties. At the peak of the roof the rafters are merely half lapped and nailed. Sometime after the barn was initially erected, the easternmost room of the

SM-144, Burlington
St. Mary's County
7.3 Description

main section was converted for use as a corn crib or granary. These changes included laying a plank floor on top of hewn floor joists, creating an interior lining of vertical planks, and framing-in a loft.

The earthfast lean-to, situated on the east side of barn, is constructed of similarly tooled framing members. The earthfast cedar posts are mortised-and-tenoned into hewn wall plates. Ties run east to west linking the shed to the main section. These ties support a hewn false plate that in turn supports the rafters. A series of struts extend off the rafters giving the roof of the shed a distinctive hipped shape. These struts connect to the gable end of the main section. Like in the main section, a series of four vertical posts bridge the space in the shed so as to support a series of tobacco poles.

8.1 Significance

construction of the house, Dent wrote periodically about the injustices Union troops inflicted upon him and his neighbors and needless to say was a staunch Confederate supporter who also spoke out extensively about the rights of states. Much of the Dent family moved to Atlanta, Georgia as a result of the American Civil War, but oral tradition relates that those who stayed behind harbored many escaped prisoners from Point Lookout and helped them successfully escape to Virginia. Later residents of Burlington included Lettie M. Dent (later Gough) a famous educator and superintendent of schools for St. Mary's County who judiciously served the county from the 1920s-1950s. During this period, Miss Dent oversaw the consolidation of schools--the movement away from local one room schoolhouses to more centralized facilities. A scholarship, dedicated to her memory, is awarded to St. Mary's County students interested in pursuing careers in education. The county also named an elementary school in New Market after Miss Dent.
