Davis Oyster Packing Plant  
Wynne  
Private  
(Page 1)

c. 1900s

In 1896 Samuel and Mary Rawleigh purchased a two acre lot on a point of land overlooking Smith Creek and the Potomac River near Wynne, Maryland. The spot proved ideal for a steamboat wharf and soon attracted a number of associated maritime industries. In 1905, for instance the St. Mary's Packing and Manufacturing Company purchased the property and erected a series of buildings for the shucking and packing of oysters. In 1925 the company sold out to Charles R. Lewis who continued the operation for many years until he was bought out by the industrious Charles Davis. It was under Davis that the business was greatly expanded. As local author Clarence D. Bradburn noted and his wife Luella Davis concurred, Davis would eventually employ approximately 105 people.<sup>1</sup> Besides packing oysters during the winter time, Davis also ran a crab picking and steaming operation and even constructed an oyster crushing plant to grind oyster shells into lime which then could be used for fertilizing neighboring farm soils. During Davis' ownership the two acre parcel had grown to include an ice plant, store, warehouse, soft crab shed, oyster shucking and crab picking building, a steaming shed, and an office.

Several of these buildings remain today. An oyster shucking and crab picking shed, a warehouse for fertilizer, and an oyster crushing plant all resemble one another. Each of the long structures are oriented on an east/west axis, feature board-and-batten siding, and are sheathed with metal roofs. A small one story frame building situated near the present wharf once served as an office. Still used by current owner Thomas Courtney, these buildings recall over 100 years of

maritime activity in Wynne as well as St. Mary's County. With the decline of oysters in the Potomac River and the corresponding decrease in watermen, very few of these facilities survive intact and remain in use. The combination of these buildings, therefore, document a rapidly disappearing landscape.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

Contributing Resource Count: 5

The Davis Oyster Packing Plant, situated at the end of Wynne Road overlooking the confluence of the Potomac River and Smith Creek, is located in Wynne, Maryland. The Plant consists of a series of buildings including an office, general store (now a family restaurant), an oyster shucking/crab picking house, two warehouses and several non-contributing campers. Generally oriented on an east/west axis, this complex of buildings reside on a flat, 3.1 acre tract. Several residences, Scheibles Restaurant, Smith Creek, and the Potomac River border the property. Old foundations and cement pads from several previous buildings are located near many of the buildings.

The old general store of the Davis Oyster Packing Plant is currently Courtney's Restaurant. As with most of the buildings on the property, the old general store was built in the 1940s. This one story cinder block building exhibits a false parapet front on the south/primary elevation that hides the flat roof. This side is pierced by three picture windows and three modern doors -- apparently the original fenestration. The interior has been extensively modified to accommodate the present restaurant business.

The fertilizer warehouse is situated just to the south of the old general store. This board-and-batten clad, red building with a corrugated metal roof is still used as a warehouse. According to Thomas Courtney, the building was once located on the wharf and was used for storage there. Repeated storms and a crumbling wharf precipitated moving the building back from the water. The building does feature opposing, sliding door entries on the north and south sides. All of the elevations, except for the east, are pierced by a number of unglazed, swinging wood windows that can be propped open or barred shut. The interior consists of an open space used largely for storage.

Another warehouse lies to the north of the old general store. This building does not feature as many openings as the previous structure as it features a pair of garage door openings on the south side and a single garage door on the north side. Intermittent six-pane windows are situated near the eaves around the building. Rimmed by a poured concrete foundation, the frame building is sheathed with board-and-batten siding. Two metal ventilators project from the building's corrugated metal covered roof. A small shed roof addition lies on the west side of the structure. Like the aforementioned warehouse, the interior consists of an open space used for storage.

To the west of the old general store is a small, one story, three bay, frame office with a gable roof. The office was constructed on a poured concrete foundation. This foundation supports a circular sawn frame that is currently covered with aluminum siding. The roof, pierced by a single chimney flue, is sheathed with asphalt shingles. The primary entry is located on the building's east elevation. This door is flanked on either side by a slender one-over-one, double-hung sash window. Two one-over-one windows pierce the south side of the building and one, one-over-one window lights the west side.

The only remaining work building remaining from the Davis Oyster Packing Plant is the Oyster Shucking/Crab Picking building that occupies the northernmost boundary of the property. This long, one story building was built on a poured concrete foundation. The exterior is sheathed

## SM-664, Davis Oyster Packing Plant

St. Mary's County

### 7.1 Description

with board-and-batten siding and the roof is covered with raised seam metal. Two metal ventilators pierce the roof. A concrete pad for the no longer extant crab steaming apparatus lies just south of the building's southwest corner and east of a neighboring wharf.

The fenestration of the building is actually limited to a series of now boarded over windows, a six-over-six window, a small six pane window, and three large doors on the south side, two six-over-six windows and a small swinging door pierce the west gable end, a single swinging door opening pierces the north side, and two doors and a boarded over window and two doors light the east elevation.

While much of the interior has been modified for its current storage use, the main work area of the plant can be seen on the building's north side. Here, a long space with a series of counters were aligned with the building's east/west axis. Due to the lack of windows on the north side of the building, however, a series of thirteen skylights were installed to provide adequate light. According to Thomas Courtney, the space was used during the winter for shucking oysters and during the summers for picking crabs. The building also contains a large refrigerator on the east side.
