Smith Island crabbing skiff  
St. Michaels, Maryland

This vessel is an 18'10" long deadrise crabbing skiff of a type indigenous to the Smith Island area of Chesapeake Bay. Built c. 1900 in the Smith Island area, she was used for crabbing (dip-netting and tending floats) by being poled or pushed. She may also have had a sailing rig or an engine at one time. The vessel is on display at the Chesapeake Bay Maritime Museum. This vessel is significant as an example of an important indigenous Bay craft--the V-bottomed, deadrise skiff that developed in the 19th century for crabbing, fishing, and oystering. It is of especial interest as being a good example of the particular regional variation of crabbing skiff built in the Deal, Smith, and Tangier Island areas.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This boat is a deadrise skiff measuring 18'10" long and 4'7" in beam. Built c. 1900 in the Smith Island area, she was used for crabbing(dip-netting and tending floats) by being poled or pushed. She may also have had a sailing rig or an engine at one time. The boat is on display at the Chesapeake Bay Maritime Museum, St. Michaels as an example of a type commonly used around Deal, Smith, and Tangier Islands.

The skiff has a hard chine and transom stern. She is fore-and-aft planked on the bottom, rather than cross-planked as are many deadrise skiffs. She is partially decked, with washboards, and is painted white with red-brown trim on the sheer.

The skiff has a straight, slightly raking stem with the stemhead raised above the foredeck. The transom stern is slightly raked. Construction is fore-and-aft planking, with the bottom boards nailed into the sides at the chine, giving a shallow, almost flat, V-bottom and straight sides. There are twelve full frames run from chine to chine across the bottom planking. The washboards and half-decking at bow and stern are supported by 12 wide, sawn triangular knees. There is a 2 3/4"-high coaming surrounding the break in the deck. A section of the afterdeck near the transom, measuring 21 1/2" by 16", lifts out over an 8 1/2"-deep storage well. The narrow sheer rubbing strake added to the outside of the washboards is painted a dark red-brown, the sole decoration.

Prepare both a summary paragraph of significance and a general statement of history and support.

This vessel is significant as an example of an important indigenous Bay craft--the V-bottomed deadrise skiff that developed in the 19th century for crabbing, fishing, and oystering. Built around 1900 this boat is a good example of the type used and built around Deal, Smith, and Tangier Islands. It was poled or pushed rather than being rowed.

The Chesapeake Bay crabbing skiff is an indigenous type which is to be seen in many different local forms and variations (at least 15) reflecting design innovations by particular builders or definite regional characteristics. The V-bottom, deadrise form, first seen in the local skiff/bateau vessel type, was later adapted by local boatbuilders for the larger skipjacks, or two-sail bateaux. Thus, these surviving examples of Chesapeake-area skiffs are important in understanding the construction techniques and design innovations still to be seen today in the surviving skipjack fleet. They also were the means of carrying out an important local industry--crabbing, fishing, and oystering.

The Smith Island skiff at the Museum was built at Smith Island c. 1900 and follows the local type in construction details and overall shape. The skiff has a high straight bow, very shallow draft, and is fore-and-aft planked--characteristics shared by the later motorized Smith Island crab skiff also in the Museum's collection. The boat was used for crabbing by being poled or pushed rather than rowed and was characteristically used to tend floats and for dip-netting. The boat was donated to the Museum in 1972 by Mr. and Mrs. Jackson Ray Todd of Cambridge, Md.
