

CAPSULE SUMMARY SHEET

Survey No.: T-951 (PACS 13) Construction Date: circa 1850

Name: George W. Councill Property

Location: 30710 North Dover Road, Easton vicinity, Talbot County

Private/Agriculture, Private Residence/Occupied/Fair/Accessible: No

Description: The George W. Councill Property is a farmstead located on the north side of North Dover Road in the Easton vicinity, Talbot County. The property consists of an I-house, two machine sheds, a small barn and a hen house. The main house, constructed circa 1850, is a 2-story, 3-bay I-house. The house is oriented east-west, with a smaller 2-story, 2-bay side-gable addition constructed circa 1900 attached to the south gable end of the I-house. The structure has a side-gable roof, with interior end brick chimneys at both gable ends. The addition has an interior end brick chimney at its south gable end. The building is of wood-frame construction with asbestos shingle siding and a poured concrete foundation. The roof is covered with asphalt shingles and the gable ends have return cornices. The windows are wood double-hung and a hipped roof porch is located on the west elevation. The hipped roof front porch is partially collapsed and the porch floor has been removed. Five wood posts temporarily support the roof. The property contains a hen house, two machine sheds and a small all-purpose barn.

Significance: The George W. Councill Property is a farmstead located on the north side of North Dover Road in the Easton vicinity, Talbot County. The farm was developed circa 1850, at the time of ownership of the Councill family. In 1849, Mary Councill purchased 140 hectares (345.5 acres) of Dover. The Councill farm is marked on the 1858 Map of Talbot County, Maryland by William H. Dilworth under the name "G. W. Councill". The property, containing a reduced acreage of 81 hectares (200 acres), was sold to George W. Councill in 1872. John Chilcutt bought the property in 1874. The farm appears on the 1877 Illustrated Atlas of Talbot and Dorchester Counties, Maryland, by Lake, Griffing and Stevenson under the name "J. Chilcutt". The property remained in the ownership of descendants of John Chilcutt until 1946, when purchased by Francis Nevius. Upon the death of Francis Nevius in 1983, the property was sold to Jane Taylor. In 1984, Taylor sold 42.5 hectares (105 acres) to the current owners, Donald Anders, Richard Anders and Mark S. Anders.

Resource Count: 5

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

The George W. Councell Property is a farmstead located on the north side of North Dover Road in the Easton vicinity, Talbot County. The property consists of an I-house, two machine sheds, a small barn and a hen house. The main house, constructed circa 1850, is a 2-story, 3-bay I-house. The house is oriented east-west, with a smaller 2-story, 2-bay side-gable addition constructed circa 1900 attached to the south gable end of the I-house. The structure has a side-gable roof, with interior end brick chimneys at both gable ends. The addition has an interior end brick chimney at the south gable end. The building is of wood-frame construction with asbestos shingle siding. The building supported by a modern poured concrete foundation. The roof is covered with asphalt shingles and the gable ends have return cornices. The windows are wood double-hung and a hipped roof front porch is located on the west elevation. The hipped roof porch is partially collapsed and the porch floor has been removed. Five wood posts temporarily support the roof.

The west, or front facade has an off-center entrance within the hipped roof porch. The original doorway and surround have been replaced with a modern paneled wood door, which has been moved slightly north of the original entrance. The exterior wall around this alteration has been repainted. There are two 6/6 double-hung windows flanking the entrance. The second story has three 6/6 double-hung windows vertically aligned over the first story openings. The first story of the south addition has two 6/6 double-hung windows, while the second story has two 3/3 double-hung windows.

The north elevation has two 4/4 double-hung windows in the gable end.

The east, or rear elevation is symmetrical with a central entrance flanked by two 6/6 double-hung windows on the first story. The entrance is a wood 6-panel door with 3-light sidelights and a rectangular transom. The transom lights have been covered with insulation. The entrance is sheathed by a pent roof. The second story of the I-house has three 6/6 double-hung windows vertically aligned over the first floor openings. The east elevation of the addition has a 6/6 double-hung window and an enclosed shed roof porch on the first story. The porch has wood siding, an asphalt shingle roof, a 6/6 double-hung window and a 6-light awning window. The second story of the addition has two 3/3 double-hung windows.

The south elevation of the I-house is largely obscured by the south addition. The gable end of the I-house has two 4/2 double-hung windows on the attic level. The south elevation of the addition has two 6/6 double-hung windows on the first story and two 4/4 double-hung windows on the second story.

There are four outbuildings associated with this building. Located north of the house is a 1-story shed roof hen house constructed circa 1930. The hen house has an asphalt shingle roof, vertical wood siding and a concrete block foundation. The south elevation has a wood batten door and two 6-light awning windows.

To the west of the house and hen house are two machine sheds and a small barn. The machine sheds, constructed circa 1930, are wood-frame buildings with concrete block foundations and

ADDRESS: 30710 North Dover Road, Easton vicinity, Talbot County

7. Description (Continued)

corrugated metal siding and roofs. The buildings have open bays on the south elevation. The east machine shed has two open bays, while the west machine shed has four open bays.

A small barn is attached to the south elevation of the west machine shed. The barn, constructed circa 1930, is also of wood-frame construction with corrugated metal siding and roof. The barn has a gable roof and a door on the east elevation.

Access to the interior of the buildings was not available.

The property is located on the north side of North Dover Road, with farmland to the north and west, open space to the east and an active landfill to the south. There is a wooded ravine north of the farm, dividing the property from the agricultural fields of Dover Ferry Farm (MHT# T-948) to the north. The Charles W. Ross Property (MHT# T-952) is located to the west, and land owned by the Town of Easton is to the east, adjacent to the Choptank River. On the south side of North Dover Road is a landfill and a sewage waste stabilization pond.

STATE HISTORIC SITES INVENTORY FORM

RESOURCE NAME: George W. Councill Property

SURVEY NO.: T-951 (PACS 13)

ADDRESS: 30710 North Dover Road, Easton vicinity, Talbot County

8. Significance (Continued)

A small all-purpose barn is attached to one of the machine sheds. The barn was the principal building erected on a farm which provided space for cows, horses, equipment, and hay, straw or tobacco storage. The barns most frequently found in the project area were the all-purpose barn, used for storage of animals, feed and mechanical equipment, or tobacco barns, specifically constructed for the purpose of storing and curing tobacco.

The property contains a hen/chicken house. Chicken houses are utilitarian structures used to provide protection for the chickens to nest and roost. The size of the structure was dependant on the number of chickens in the flock. Early chicken houses were simple structures constructed of rough timber and reused boards, and did not conform to specific traditional building forms. Chicken houses throughout the eighteenth and nineteenth centuries were of varied forms and material without distinctive external features to indicate their use. Often older outbuildings were converted for use as chicken houses. The structures were commonly constructed to face south or east to provide direct sunlight and circulation. The location of the building on well-drained, sandy soil was another effort to keep the chicken house dry and disease free. Chicken houses were also constructed against other outbuildings which used the existing building as the rear wall of the chicken house. Free-standing structures were built into hillsides, with a high slope foundation. The banked building was sheltered by the hillside on three sides, and allowed for a 3-story structure. In the twentieth century chicken farming became specialized resulting in standardized, recognizable chicken houses. A long, low, broadly-pitched gable roof structure of pole construction characterizes chicken houses of the twentieth century.

History of Surrounding Area

In June 1631 Cecil Calvert, the Second Lord Baltimore received a royal charter from Charles I founding the English colony of Maryland. This land was inhabited by the Choptanks, Nanticokes, Wicomessex and other peoples when English explorers and early settlers arrived. The majority of Talbot County's population descended from families of English ancestry. African-Americans arrived in the county as slaves and have remained the largest minority population in the county. From the end of the eighteenth century to the present, the county's population has been primarily Quaker or Methodist. Both groups contributed to a strong anti-slavery sentiment in the county years before the Civil War.

Many of the major plantations were established during the decade prior to the foundation of Talbot County (by winter 1661-1662). Plantation families such as these were the county's political and social leaders to the beginning of the twentieth century. Tobacco energized the economy initially but by the mid-eighteenth century, planters began growing wheat as well. The supply of navigable waterways influenced settlement patterns since planters with their own landings could trade directly with England. After the Revolutionary War, the bulk of Talbot County's goods found markets in Philadelphia or Baltimore. Both the Choptank River and Tred Avon Creek gave the inhabitants of the central and eastern portions of Talbot County access to markets outside of the county by sailing ships and later by steamboats.

8. Significance (Continued)

Seafood and agricultural production periodically endured slumps which were broken by transportation improvements and subsequently expanded markets. In the mid-nineteenth century, the combination of railroads and steamboats encouraged agricultural diversity and prosperity. Farmers could send their perishable products to more markets than had been feasible by land transport or sailing vessels (Preston 1983, 234-235; Weeks 1984, 118). The first railroad, completed in 1871, ran north along the Eastern Shore peninsula and enhanced trade with Philadelphia and New York City. After the completion of the Chesapeake Bay Bridge in 1952, Talbot County experienced its greatest growing pains, prompting decisions about county planning as tourists and potential residents found their way into the county in large numbers.

The area surrounding the Dover Bridge on MD 331 played an important role in the earliest days of the county. Dover Road connected Court House (present-day Easton) with Dover and continued into Caroline County. Dover itself arose from John Barker's ferry on the Choptank River which was first mentioned in the records of 1663 (Preston 1983, 80). From there a port with its village, named Dover, arose. Its importance derived from the fresh water content of the river at that point. Ships from England sought Dover's harbor in order to kill the salt water shipworms which were notoriously destructive to wooden ships. Quaker and merchant-planter William Troth centered his substantial operations from his home, Troth's Fortune, two miles north of Dover, close to the current location of Dover Bridge. After a failed bid by Dover to become the Eastern Shore capital in the late eighteenth century, Dover Ferry moved its crossing two miles upriver and the town of Dover declined into obscurity. The new ferry location was a deep and narrow section of the river, with extensive marshes on the Caroline County side. A road was extended through the marsh and the ferry site was established (Mullikin 1961, 42). The Dover name lingers in several place names, including Dover Road and Dover Bridge. In 1810 Talbot and Caroline county citizens petitioned for a bridge in the vicinity of Dover Ferry (History of Caroline County, 32-33). Historic maps indicate that a bridge was constructed in subsequent years at the site of the Dover Ferry crossing. A later replacement was one of the earliest cast-iron bridges in Maryland (History of Road Building in Maryland, 125). The bridge was constructed as a moveable structure in order to accommodate the height of the vessels which navigated the Choptank River and is labeled the "Dover Draw Bridge" on an 1873 map of the area (Martenet). The current structure is a Warren truss, swing moveable bridge which was built in 1933 (Survey Form).

ADDRESS: 30710 North Dover Road, Easton vicinity, Talbot County

8. Significance (Continued)

National Register Evaluation:

Constructed circa 1850, the George W. Councill Property is not eligible for the National Register of Historic Places. The property is not eligible under Criterion A, as research conducted indicates no association with any historic events or trends significant in the development of national, state or local history. This property is a common example of mid-nineteenth century farmstead, containing an altered I-house and twentieth century outbuildings which do not comprise a representative agricultural resource of this region from the nineteenth century. The buildings do not possess sufficient integrity of physical elements from the nineteenth century to establish an association with historic events or trends. Historic research indicates that the property has no association with persons who have made specific contributions to history, and therefore, it does not meet Criterion B. It is not eligible under Criterion C, as the main house lacks material and design integrity. The house has been covered with asbestos shingle siding and the front door has been replaced and realigned on the facade. The front porch is partially collapsed, with the porch floor removed and five wood posts temporarily supporting the roof. In addition, the 1-story rear porch attached to the east elevation has been enclosed. Finally, the structure has no known potential to yield important information, and therefore, is not eligible under Criterion D.

ADDRESS: 30710 North Dover Road, Easton vicinity, Talbot County

7. Description (Continued)

corrugated metal siding and roofs. The buildings have open bays on the south elevation. The east machine shed has two open bays, while the west machine shed has four open bays.

A small barn is attached to the south elevation of the west machine shed. The barn, constructed circa 1930, is also of wood-frame construction with corrugated metal siding and roof. The barn has a gable roof and a door on the east elevation.

Access to the interior of the buildings was not available.

The property is located on the north side of North Dover Road, with farmland to the north and west, open space to the east and an active landfill to the south. There is a wooded ravine north of the farm, dividing the property from the agricultural fields of Dover Ferry Farm (MHT# T-948) to the north. The Charles W. Ross Property (MHT# T-952) is located to the west, and land owned by the Town of Easton is to the east, adjacent to the Choptank River. On the south side of North Dover Road is a landfill and a sewage waste stabilization pond.

Prepare both a summary paragraph of significance and a general statement of history and support.

The George W. Councill Property is a farmstead located on the north side of North Dover Road in the Easton vicinity, Talbot County. The farm was developed circa 1850, at the time of ownership of the Councill family. In 1849, Mary Councill purchased 140 hectares (345.5 acres) of Dover. The Councill farm is marked on the 1858 Map of Talbot County, Maryland by William H. Dilworth under the name "G. W. Councill". The property, containing a reduced acreage of 81 hectares (200 acres), was sold to George W. Councill in 1872. John Chilcutt bought the property in 1874. The farm appears on the 1877 Illustrated Atlas of Talbot and Dorchester Counties, Maryland, by Lake, Griffing and Stevenson under the name "J. Chilcutt". The property remained in the ownership of descendants of John Chilcutt until 1946, when purchased by Francis Nevius. Upon the death of Francis Nevius in 1983, the property was sold to Jane Talyor. In 1984, Taylor sold 42.5 hectares (105 acres) to the current owners, Donald Anders, Richard Anders and Mark S. Anders. The property contains a circa 1850 farmhouse and four twentieth century outbuildings, including a hen house, two machine sheds and a small all-purpose barn.

The house on the property is a 2-story, 3-bay I-house. The standard I-house is one room deep and two stories tall with three to five openings on each story. From the front, an I-house is often indistinguishable from a Georgian house. The gable view, however, reveals the greater depth of the Georgian house. Chimneys are most often located on the interior of the gable ends, however, some I-houses can have central or exterior chimneys. Usually, an I-house has a one-story porch running the length or nearly the length of the long side. In the interior, a central hall separates the two rooms on the first floor; the second floor contains either two or four sleeping chambers. Due to the narrowness of the main core, many I-houses have kitchen wings to the rear. During the Victorian period, pre-cut detailing or a two-tiered porch was commonly grafted onto the traditional I-house. The I-form was popular into the early twentieth century, with examples appearing in catalogs of mass-produced suburban houses (Gowans 1992: 55-6).

Two machine shed are located on the property. Machine sheds are long gable-roof buildings which serve as storage space for large farm equipment. Often of wood-frame construction, covered with an exterior sheathing, machine sheds are open on one or more sides to allow for easy storage of machines like threshers, combines, and farm vehicles.

8. Significance (Continued)

A small all-purpose barn is attached to one of the machine sheds. The barn was the principal building erected on a farm which provided space for cows, horses, equipment, and hay, straw or tobacco storage. The barns most frequently found in the project area were the all-purpose barn, used for storage of animals, feed and mechanical equipment, or tobacco barns, specifically constructed for the purpose of storing and curing tobacco.

The property contains a hen/chicken house. Chicken houses are utilitarian structures used to provide protection for the chickens to nest and roost. The size of the structure was dependant on the number of chickens in the flock. Early chicken houses were simple structures constructed of rough timber and reused boards, and did not conform to specific traditional building forms. Chicken houses throughout the eighteenth and nineteenth centuries were of varied forms and material without distinctive external features to indicate their use. Often older outbuildings were converted for use as chicken houses. The structures were commonly constructed to face south or east to provide direct sunlight and circulation. The location of the building on well-drained, sandy soil was another effort to keep the chicken house dry and disease free. Chicken houses were also constructed against other outbuildings which used the existing building as the rear wall of the chicken house. Free-standing structures were built into hillsides, with a high cone foundation. The banked building was sheltered by the hillside on three sides, and allowed for a 3-story structure. In the twentieth century chicken farming became specialized resulting in standardized, recognizable chicken houses. A long, low, broadly-pitched gable roof structure of pole construction characterizes chicken houses of the twentieth century.

History of Surrounding Area

In June 1631 Cecil Calvert, the Second Lord Baltimore received a royal charter from Charles I founding the English colony of Maryland. This land was inhabited by the Choptanks, Nanticokes, Wicomesses and other peoples when English explorers and early settlers arrived. The majority of Talbot County's population descended from families of English ancestry. African-Americans arrived in the county as slaves and have remained the largest minority population in the county. From the end of the eighteenth century to the present, the county's population has been primarily Quaker or Methodist. Both groups contributed to a strong anti-slavery sentiment in the county years before the Civil War.

Many of the major plantations were established during the decade prior to the foundation of Talbot County (by winter 1661-1662). Plantation families such as these were the county's political and social leaders to the beginning of the twentieth century. Tobacco energized the economy initially but by the mid-eighteenth century, planters began growing wheat as well. The supply of navigable waterways influenced settlement patterns since planters with their own landings could trade directly with England. After the Revolutionary War, the bulk of Talbot County's goods found markets in Philadelphia or Baltimore. Both the Choptank River and Tred Avon Creek gave the inhabitants of the central and eastern portions of Talbot County access to markets outside of the county by sailing ships and later by steamboats.

8. Significance (Continued)

Seafood and agricultural production periodically endured slumps which were broken by transportation improvements and subsequently expanded markets. In the mid-nineteenth century, the combination of railroads and steamboats encouraged agricultural diversity and prosperity. Farmers could send their perishable products to more markets than had been feasible by land transport or sailing vessels (Preston 1983, 234-235; Weeks 1984, 118). The first railroad, completed in 1871, ran north along the Eastern Shore peninsula and enhanced trade with Philadelphia and New York City. After the completion of the Chesapeake Bay Bridge in 1952, Talbot County experienced its greatest growing pains, prompting decisions about county planning as tourists and potential residents found their way into the county in large numbers.

The area surrounding the Dover Bridge on MD 331 played an important role in the earliest days of the county. Dover Road connected Court House (present-day Easton) with Dover and continued into Caroline County. Dover itself arose from John Barker's ferry on the Choptank River which was first mentioned in the records of 1663 (Preston 1983, 80). From there a port with its village, named Dover, arose. Its importance derived from the fresh water content of the river at that point. Ships from England sought Dover's harbor in order to kill the salt water shipworms which were notoriously destructive to wooden ships. Quaker and merchant-planter William Troth centered his substantial operations from his home, Troth's Fortune, two miles north of Dover, close to the current location of Dover Bridge. After a failed bid by Dover to become the Eastern Shore capital in the late eighteenth century, Dover Ferry moved its crossing two miles upriver and the town of Dover declined into obscurity. The new ferry location was a deep and narrow section of the river, with extensive marshes on the Caroline County side. A road was extended through the marsh and the ferry site was established (Mullikin 1961, 42). The Dover name lingers in several place names, including Dover Road and Dover Bridge. In 1810 Talbot and Caroline county citizens petitioned for a bridge in the vicinity of Dover Ferry (History of Caroline County, 32-33). Historic maps indicate that a bridge was constructed in subsequent years at the site of the Dover Ferry crossing. A later replacement was one of the earliest cast-iron bridges in Maryland (History of Road Building in Maryland, 125). The bridge was constructed as a moveable structure in order to accommodate the height of the vessels which navigated the Choptank River and is labeled the "Dover Draw Bridge" on an 1873 map of the area (Martenet). The current structure is a swing moveable bridge and metal through truss bridge which was built in 1932 (Survey Form).
