

ABSTRACT

WA-I-286

MASON-DIXON LINE: MILESTONE NO. ---(108)  
Mason and Dixon, Pennsylvania/Maryland  
Public/private

1767 (first set  
c. 1902)

Milestone No. ---(108) is an original milestone of 1767, added approximately to the West Line by the Cumberland Valley Railroad sometime prior to 1902, and reset nearby correctly on the Line in 1902 during the 1900-03 Resurvey of the Maryland-Pennsylvania boundary. Damaged recently by a vehicular accident, about 2/3 of the monument remains in very good condition, firmly in place and otherwise unaltered, but until repaired would have to be considered in ruins. It stands about 17 inches above its concrete foundation, as set in 1902, and measures about 13 inches on the north and south sides, about 12 inches on the east and west sides. The huge chunk broken diagonally off the top across the north and south sides, and especially down along the west side, is believed to have been retrieved by the National Geodetic Survey (and its disappearance will be traced in Phase II of this project). Most of the embellishments of the <sup>remaining 2/3 at the site are clear:</sup> the vertical fluting and horizontally-fluted margins; <sup>on all four sides</sup> the capital P on the north side facing Pennsylvania and M <sup>(though partially gone)</sup> on the south side facing Maryland. Despite not marking any particular distance between Milestone Nos. 104(107) and 105(109), <sup>this monument</sup> is nevertheless significant on the national and state levels primarily as one of 135 original Mason and Dixon monuments in the thematic group series of some 248 markers still defining their 230.228-mile West Line, the boundary later known as the Mason-Dixon Line, famous for its historical impact and innovative survey methods. Locally, as one of 48 original monuments marking the present Washington/Franklin-Fulton county boundary (10 crownstones; 38 milestones), No. ---(108) is also significant as one of a diminishing number of objects and structures with a visually identifiable relationship to the colonial and Civil War heritage of these counties. In addition, it is the one such monument placed on the West Line initially by a railroad--a touching reminder of a rather typical late 1800's-early 1900's effort by railroads to promote special historical and other points of interest along their routes, much the way state highway commissions continued to do later on.

ABSTRACT

WA-I-286

Ca. 1768

Mason-Dixon Milestone Misplaced

Mason-Dixon Vicinity

public

This Mason-Dixon boundary marker set between the 104th and 105th milestones is apparently not in its original location. Although it is not placed at a correct mile interval, it is identical to the original stones and would seem to properly mark the boundary location. It is significant as one of the markers used to form the Mason-Dixon Line.

<input type="checkbox"/> FAIR	<input type="checkbox"/> UNEXPOSED				

**DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE**

Milestone No. ---(108) is an original milestone of 1767; retrieved by the Cumberland Valley Railroad sometime prior to 1902 and set by them within their right-of-way (now belonging to Conrail); ~~reset accurately~~ <sup>nearby, but not marking a mile</sup> on the West Line as an addition between Nos. 104 (107) and 105 (109) in 1902 during the 1900-03 Resurvey of the Maryland-Pennsylvania boundary. In ruins from a recent vehicular accident, it is otherwise in very good condition, firmly in place, unaltered.

The area here is rural, sparsely settled, comparatively level open farmland. The site is within Election District 13 of Washington County, MD, and Antrim Township, of Franklin County, PA; in the middle of a small scattered settlement called Mason and Dixon, on the east side of the Conrail right-of-way, about 50 feet south of State Line Road (PA 163 & LR-28030), and can be seen easily from the road, all seasons, even though not marked in any other way.

The milestone, according to the Resurvey notes (MGS, Vol. 7, 1908, p. 90):  
 (was) One of the Mason and Dixon monuments which had formerly been in use as a horse block at a neighboring farmhouse and now standing on the east side of the right of way of the Cumberland Valley R. R. at the station called Mason and Dixon. The railway company had secured it and had placed it approximately on the line. Its position was corrected and it was then set in masonry by the railway.

As with all original Mason and Dixon West Line monuments, this additional milestone is an embellished oolitic limestone post, <sup>(no longer)</sup> with a low pyramidal top, quarried and carved in England; originally measured about 12 inches square by about 4½ feet long, cut to stand about 3 feet high, with the base left rough-cut for setting into the ground. The distinguishing decorative features are the vertical fluting with horizontally-fluted margins on all four sides, and the Roman capital letters P on the north side facing Pennsylvania and M on the south side facing Maryland, each V-sunk in the center of a plain shallow circle panel near the top. It continues to stand about 17 inches high, and measures about 13 inches on the north and south sides, about 12 inches on the east and west sides. At the time of the accident, a huge chunk was broken diagonally off the top, across the north and south sides, and particularly the west side, leaving the remaining ¾ of the stone intact. Most embellishments are clear on the north and east sides; less so on the south and west sides, from weathering. The top is almost entirely gone. The broken-off portion is believed to have been retrieved by the National Geodetic Survey. (It's demise will be traced in the follow-up Phase II of this boundary marker project.)

**DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE**

This Mason-Dixon boundary marker is located along the east edge of the Penn Central railroad track just south of Pennsylvania route 163, the State Line Road at Mason and Dixon northwest of Hagerstown.

Although the marker is not in its original location it would seem to correctly indicate the boundary between Washington County, Maryland and Antrim Township in Franklin County, Pennsylvania.

This marker is identical to other Mason-Dixon milestones with reeding on its east and west surfaces and an M and P incised on its south and north sides respectively. This stone, however, is located between the 104th and 105th mile markers and so is out of place. A geological survey map of Maryland, dated 1941 does not show a mile marker at this location. The map does, however, note the location of a U.S. Coast Survey bench mark which has been set into the top surface of the stone.

The stone is in good condition.

## STATEMENT OF SIGNIFICANCE

This Mason-Dixon boundary marker set between the 104th and 105th milestones is apparently not in its original location. Although it is not placed at a correct mile interval, it is identical to the original stones and would seem to properly mark the boundary location. It is significant as one of the markers used to form the Mason-Dixon Line.

Charles Mason and Jeremiah Dixon began work on the division line between Maryland and Delaware and Pennsylvania in 1764 and completed it in 1767. The team crossed South Mountain and began working on the portion of the line forming the northern boundary of Washington County on September 1, 1765. In 1768 the actual placing of stones was completed.

The running of the Mason-Dixon Line solved the boundary dispute which had plagued Maryland, Pennsylvania and Delaware. A temporary line had been run in 1739 which was approximately 225 perches north of the present line.<sup>1</sup> This line, however, apparently did not ease the dispute. The contested land between Maryland and Pennsylvania brought frequent clashes among residents in the area. One of the most famous leaders in the border fighting was Col. Thomas Cressap who was given the responsibility of holding the Maryland border by Lord Baltimore.

The Penns and Calvert, Lord Baltimore, employed Charles Mason and Jeremiah Dixon of London to lay the boundary between Pennsylvania and Maryland and Delaware. These men and their team used sophisticated scientific methods to determine the course of the boundary. At each mile a stone was planted with an M and P incised into the appropriate surfaces. Five mile intervals were marked with larger, more elaborate crownstones which carried the coats of arms of the proprietors. The stones are said to have been cut in England. Although enough stones were imported to complete the line, they were not used in the rough mountainous areas because of transportation difficulties. Instead, high piles of native stones marked the miles in the mountains. According to T.J.C. Williams' History of Washington County, the unused English stones were left at Fort Frederick near Clear Spring in Washington County.<sup>2</sup> Perhaps this marker is one of these unused stones.
