

Capsule Summary

Inventory No. WA-II-1172
Martin L. Griffith Farmstead
4718 Toyer Road
Washington County, MD
Ca. 1899; ca. 1920
Access: Private

The Martin L. Griffith Farmstead consists of approximately 3 acres of hardscrabble hillside land and the small complex of buildings including a log and frame dwelling house, frame out-kitchen, a small timber frame barn, concrete block springhouse, and a log tenant house with privy. Sited on the east face of Red Hill overlooking Pleasant Valley in southern Washington County, the surrounding hillside is primarily wooded with scattered log dwelling house sites and a number of new houses. There are 6 contributing buildings (described above) and 1 non-contributing block shed on the property.

The Martin L. Griffith Farmstead is significant under National Register Criterion A as a component property of the post-emancipation African-American community located along the east face of Red Hill, primarily along Toyer Road. The farmstead is significant also under Criterion A as a representative example of agricultural development on the hardscrabble hill and mountainsides of west-central Maryland. Such hillside farmsteads, owned or tenanted by both white and black families throughout the region, were typically quite small, from 3 to 10 acres in the Red Hill area, and concentrated on subsistence and/or market products. The Martin L. Griffith Farmstead is significant under National Register Criterion C as an example of vernacular African-American domestic and agricultural architecture. The farmstead includes a characteristic collection of domestic and agricultural buildings, including a small hewn timber-

WA-IT-1172

framed barn, associated with hillside farming, a resource type that began to disappear with the decline of small farms beginning in the 1930s and 40s.

Prepare both a one paragraph summary and a comprehensive description of the resource and its various elements as it exists today.

Summary

The Martin L. Griffith Farmstead consists of approximately 3 acres of hardscrabble hillside land and the small complex of buildings including a log and frame dwelling house, frame out-kitchen, a small timber frame barn, concrete block springhouse, and a log tenant house with privy. Sited on the east face of Red Hill overlooking Pleasant Valley in southern Washington County, the surrounding hillside is primarily wooded with scattered log dwelling house sites and a number of new houses. There are 6 contributing buildings (described above) and 1 non-contributing block shed on the property.

The 3-acre Martin L. Griffith Farmstead was part of a 10 $\frac{3}{4}$ -acre farmstead first developed in 1899 from one of the "Antietam Works" mountain woodlots of Red Hill. Located on the west side of Toyer Road, a county road segment that turns into a non-county gravel dead end within several hundred feet, the terrain is primarily deciduous wooded hillside on the east face of Red Hill. A grove of pines covering several acres stands on the north side of the building complex. The building complex sits within approximately two acres of grass lawn, gravel driveway, and wetland below the springhead. The farmstead has changed only gradually over its c.100-year existence, primarily through various additions to the house and removal of several agricultural outbuildings.

Dwelling House

The dwelling house is a two-story, two bay, log house on stone foundation with several frame additions. The front, log section of the house was probably constructed c.1899. Windows are two over two sash; the original wood German lapped siding has been covered with vinyl siding. The roof is channeled metal sheets. The front (east) elevation has a raised concrete block porch, which wraps around to a new one-story, frame shed addition on the south elevation. The porch has a corrugated metal shed roof supported on 4" x 4" square posts.

A full-length, two-story, frame shed addition across the west (rear) elevation, probably c.1920, added 4 rooms to the original 2-room log house. The addition raised the west roof elevation giving the building a "salt-box" appearance. The rear addition is one bay deep and two bays across the back; windows are smaller two over two sash. A brick chimney with a tall, corbelled brick extension rises from the center of the west (rear) wall to the addition. A one-story frame shed addition extending west from the west elevation encloses a furnace room over the concrete cistern (no longer in use).

On the north elevation of the house, the rear addition extends beyond the north wall of the log section approximately 5 feet. A small shed-roofed pantry addition is located within the corner made by the extended rear addition. A shed-roofed porch on the north elevation of the

Maryland Historical Trust

Maryland Inventory of Historic Properties Form

Inventory No. WA-II-1172

Name Martin L. Griffith Farmstead

Continuation Sheet

Number 7 Page 1

rear addition has been enclosed, forming an attachment to the frame out-kitchen on the north-west corner.

The interior floor plan of the house has been much altered by the various additions to the house and is currently undergoing renovations. However, the original log section of the house was, and remains, one room on the first floor and one room on the second floor. Moldings are all unpainted, stained wood. Baseboards are unpainted, stained lengths of German lapped siding boards. Stairs to the second floor are located in the northwest corner of the log section; originally boxed and running westward, the stairs were altered with the rear addition c.1920 and are now accessed from the kitchen (northwest room of the rear addition) and run eastward. The upper room of the log section was originally unplastered. Exposed log walls show evidence of whitewash and later whitewashed canvas covering. Ceiling joists and boards were covered with wallpaper. Access to the upper story addition rooms was cut through the rear (west) log wall. The lower story of the rear addition included a back parlor or dining room (now completely striped) and a kitchen. The cellar is accessed through an exterior bulkhead with stone steps. The cellar is stone-lined with concrete floor and appears to have been used for cold storage. Joists for the log section above are round logs.

Out-kitchen

The one-story, frame out-kitchen was originally a stand-alone building, probably dating c.1899. It was joined to the dwelling house by the enclosure of the north porch, probably within the 1990s. The building is gable-front, facing east, with a door and window. The exterior is sided with wood lapped siding. A small, fixed six-light window in the east gable indicates a storage loft above the kitchen room although there is no stair access from the interior room. A brick interior chimney rises from the west gable. A second door is located on the south elevation and a window on the north. The interior is plastered and lined with wainscot. The exposed interior flue hole on the brick chimney indicates use of a freestanding wood fired cook stove. There is no evidence of a hearth.

Springhouse

Located immediately north of the dwelling house is the small, gable-fronted concrete block springhouse. The roof structure is framed with scrap wood and has metal sheet covering. Although a date of construction is unknown, the building covers an ever-flowing springhead, and likely replaced an earlier version of similar size and shape. The spring flows eastward (down hill) and spreads into a marshy area northeast of the house, which at one time had been excavated as a shallow pond.

Inventory No. WA-II-1172

Name Martin L. Griffith Farmstead
Continuation Sheet

Number 7 Page 2

Barn

Due west and uphill of the dwelling house complex is the small timber frame barn facing east. The two-story barn is designed similarly to the larger bank barns typical of the area with lower story stalls, a storage area above, and cantilevered forebay; however there is no banked access to the upper story and no central threshing floor (probably not needed since no wheat would have been grown on this small hardscrabble farmstead). The upper story was used for hay storage only and access was achieved by ladder through an exterior door on the south elevation or through a floor opening in the northeast interior corner. The framing of the barn is hewn timbers with mortise and tenon joints. Siding varies including vertical board and batten, vertical boards, and horizontal boards. The barn appears to have included two stalls but the stall area is now one open room for storage with access through hinged, board and "Z" batten doors on the south elevation. The barn roof is covered with corrugated metal sheets.

A frame, shed addition with metal roof extends from the west elevation, described in a 1948 property sale as the "garage." A faint roof shadow on the north elevation indicates the probable location of a "hog pen," also described in the 1948 sale. A "chicken house with metal roof," described in the sale ad, was located along the southern property boundary line near the barn but was demolished in the 1990s.

Approximately halfway between the house and the barn is a lawnmower shed, approximately 10 feet square, constructed of concrete block with a hipped sheet metal roof. This was constructed in the 1990s by previous owners and is considered non-contributing.

Tenant House and Privy

North of the dwelling house, on the north side of the spring marsh area, and fronting east onto Toyer Road is a very small 1 ½ story log tenant house. The log building is stuccoed with a shed entrance porch covering the east door. There is one six over six sash window in the east elevation as well. One other window in the south elevation is sash but the glass and muntins are gone. The north and south gable peaks are finished with wood lapped siding and have a fixed six-light window in each. All windows have a simple flat board or shelf architrave. The west (rear) elevation has no openings; an exterior concrete block chimney rises along the exterior wall surface. The roof is covered with corrugated metal sheets. The roof has exposed rafter tails, some exhibit evidence of hand tool work.

The interior is one room on the ground floor and one room above. The loft room is accessed by plank stairs in the southeast corner. The round log construction is exposed on the stair wall. The building is vacant and in deteriorating condition.

Approximately 100 feet to the west of the tenant house is a frame privy.

Evaluation for:

National Register Maryland Register not evaluated

Prepare a one-paragraph summary statement of significance addressing applicable criteria, followed by a narrative discussion of the history of the resource and its context. (For compliance projects, complete evaluation on a DOE Form – see manual.)

Summary of Significance

The Martin L. Griffith Farmstead is significant under National Register Criterion A as a component property of the post-emancipation African-American community located along the east face of Red Hill, primarily along Toyer Road. The farmstead is significant also under Criterion A as a representative example of agricultural development on the hardscrabble hill and mountainsides of west-central Maryland. Such hillside farmsteads, owned or tenanted by both white and black families throughout the region, were typically quite small, from 3 to 10 acres in the Red Hill area, and concentrated on subsistence and/or market products. The Martin L. Griffith Farmstead is significant under National Register Criterion C as an example of vernacular African-American domestic and agricultural architecture. The farmstead includes a characteristic collection of domestic and agricultural buildings, including a small hewn timber-framed barn, associated with hillside farming, a resource type that began to disappear with the decline of small farms beginning in the 1930s and 40s.

Resource History

The Martin L. Griffith Farmstead, like the surrounding hillside farms of Red Hill, was originally part of the vast peripheral woodlands owned by the Antietam Iron Works located at the mouth of the Antietam Creek. Wood in massive quantities was required for the production charcoal, used to fire the iron furnaces. After the death of Iron Works owner John Brien around 1834, much of the hillside woodland was divided into linear lots of 10-30 acres (see attached 1859 map of Red Hill area).¹ Over the following several decades these lots were sold individually, many as mountain woodlots. But others were further subdivided and sold to men and women, both black and white, seeking inexpensive land to farm for the support of their families.

Continuation Sheet

Number 8 Page 1

Around 1860, several enterprising free black men began purchasing lots on the east side of Red Hill, among them were Aaron Booth and Henry Griffith. While Booth sold off smaller farmsteads to a number of families along the east side of a lane now known as Toyer Road, Griffith established a farm of 60 acres at the eastern base of the hill adjoining the smaller farmsteads.² In 1874, Griffith purchased a 10 $\frac{3}{4}$ -acre "mountain lot" from Noah Rohrbach for \$340.³ Judging by the price, although modest, it appears there may have been improvements already on the property. Many of the adjoining lots along the lane (Toyer Road) had been purchased or were tenanted by a growing community of African-Americans following emancipation in 1864. Most of the lots had been occupied for several years prior to purchase and it is quite possible that one of Henry Griffith's several sons, possibly Abraham, was already living on the 10 $\frac{3}{4}$ -acre lot (see attached 1877 Atlas map).⁴

By 1880, there were at least 20 black and mulatto families living in the east Red Hill community according to the census. Included among them was Abraham Griffith, a "Stone Mason," and Henry Griffith, a "Farmer," his wife and 3 remaining children, including Martin L., the youngest at age 16. When Henry Griffith died in 1899, his farm passed to his widow Annie and oldest son Noah.⁵ Martin L. Griffith was nearly 40 years old at the time of his father's death. Already with a wife and probably a family, he immediately purchased 9 acres of the mountain lot from his brother Noah, executor of the will, for \$10.⁶ Despite the low price and a low appraisal (\$40), it seems likely that Martin Griffith and his family already occupied the lot "near Mt. Briar Church." The Mt. Briar Church had been established in 1896 with Abraham and Noah Griffith both members of the Board of Trustees who purchased the land on which the church was constructed.⁷

Martin Griffith and family occupied a three-room, two-story log house on the farmstead. The one-room kitchen was located behind the house and the small barn farther back. In 1909, Griffith purchased the remaining 1 $\frac{3}{4}$ acres of the original lot from his brother Noah.⁸ Additional improvements probably included the small tenant house on the north side of the spring. The Griffiths remained on the farmstead until 1921 when it was sold to James Nave for \$1,000.⁹

Nave owned the farmstead until his death in 1948. During his ownership a number of improvements were made, including the addition of 9 acres of woodland, an important source of heat as well as a marketable commodity. His building improvements were described in the newspaper advertisement of the sale of the Nave property in October 1948.¹⁰

...being improved by a six room frame, metal roof, two story dwelling house, summer kitchen attached; this house has no modern conveniences and is in a fair state of repair; frame garage with metal roof; chicken house with metal roof; frame stable; hog pen, also a small log house containing one large room, attic and metal roof. Two springs, one elevated...

Nave's additions to the original house had changed the roofline to include the three rooms on the back, giving the house its "salt-box" appearance it retains today. The "elevated" spring,

Maryland Historical Trust Maryland Inventory of Historic Properties Form

Inventory No. WA-II-1172

Name Martin L. Griffith Farmstead

Continuation Sheet

Number 8 Page 2

mentioned in Nave's estate sale, is now enclosed with the concrete block springhouse. Although the chicken house and hog pen have since been removed, clearly the farmstead was active in its production of subsistence food, and probably some local market goods.

By the 1940s and 1950s, the small Red Hill community had begun to disband as small farms were losing their financial viability and city employment drew families away from rural homesteads. James Nave's hillside farmstead of 20 acres sold for a mere \$1,700, purchased by Melba Garmong.¹¹ Garmong may have been a Nave relative since in 1998 Robert Stone, a "sub-trustee for Jacob R. Nave," sold the farmstead to Donna Zimmerman.¹² The renewed popularity of hillside land, not for subsistence farms, but for homes "with a view" is revealed in the purchase price of the 20-acre farmstead in 1999 of \$118,000.¹³ The farmstead has since been subdivided, leaving much of the historic building complex and its setting intact on a 3-acre lot fronting on Toyer Road.

Note: For Historical Context, please refer to *An Agricultural History of Mid-Maryland*, a Maryland Historical Trust grant funded context development project administered through The Catoctin Center for Regional Studies, 2002-2003.
